Attention: Mr. Joseph Kass, Development Manager
jkass@nhe-inc.com

Reference: **Jurisdictional Waters Assessment**
Green Heron Road Site
Greenville, Greenville County, South Carolina
S&ME Project No. 26610087

Dear Mr. Kass:

S&ME, Inc. (S&ME) is pleased to submit our Jurisdictional Waters Assessment for the above-referenced project located in Greenville, Greenville County, South Carolina. This assessment has been conducted to assess the potential for the presence of jurisdictional waters for future development of the site.

♦ Property Description

The site is located south of Green Heron Road in Greenville, Greenville County, South Carolina. The approximate 6.44-acre site is represented by Greenville County tax parcel number 0547010100205. The site is currently wooded land. The location of the site is shown on the **Exhibits** attached to this letter report.

♦ Sources Consulted

Prior to a site reconnaissance, the following sources were reviewed:

- Federal Emergency Management Agency (FEMA) Federal Insurance Rate Maps – https://msc.fema.gov.
- Google Earth Aerial Photographs.
- Greenville County GIS Aerial Photographs – https://www.gcgis.org/apps/greenvillenj/.
- South Carolina Department of Natural Resources (SCDNR) – LIDAR Data - https://www.dnr.sc.gov/gis/lidar.html.
- U.S. Department of Agriculture (USDA) – Natural Resources Conservation Service (NRCS) – Web Soil Survey – https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx.
- USDA – Soil Survey for Greenville County (1975).
- U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Wetland Mapper – http://www.fws.gov/wetlands/Data/Mapper.html.
- U.S. Geological Survey (USGS) 7.5-Minute Topographic Quadrangle Map – *Mauldin, SC 1983.*

The USGS mapping depicted one industrial waste pond on the southwestern portion of the site (Exhibit 2). USDA-NRCS mapping depicted Cecil-Urban Land Complex (CuC) and Pacolet Sandy Loam (PcE) (Exhibit 4) soil series on the site. USFWS-NWI mapping depicted one riverine (R5UBH) habitat on the southwest portion of the site (Exhibit 5). LIDAR mapping indicated a low area on the southwestern portion of the site (Exhibit 6).

♦ Methodology

S&ME conducted a site reconnaissance on March 3, 2026, to assess site conditions as to the presence and/or absence of wetland areas, using the three-parameter approach (hydric soils, hydrophytic vegetation and wetland hydrology) set forth in the 1989 Federal Manual for Identifying and Delineating Jurisdictional Wetlands, 1987 U.S. Army Corps of Engineers (USACE) Wetland Delineation Manual, and appropriate USACE Regional Supplement. S&ME also searched for jurisdictional linear features (rivers, streams, and jurisdictional ditches) and open waters (ponds and lakes) considered to be waters of the U.S. under the jurisdiction of the USACE. If a potentially jurisdictional feature was identified, S&ME located the feature using a sub-meter Global Positioning System (GPS) unit.

♦ Site Reconnaissance

The site is located in central Greenville County within the Southern Outer Piedmont ecoregion of South Carolina. Currently, the site is wooded land.

Vegetation

The site consists predominately of mixed hardwood woodland. Dominant overstory species observed included sweet gum (*Liquidambar styraciflua*), northern red oak (*Quercus rubra*), water oak (*Quercus nigra*), white oak (*Quercus alba*), and chestnut oak (*Quercus montana*). Dominant understory species included canopy dominants, loblolly pine (*Pinus taeda*), Chinese privet (*Ligustrum sinense*), eastern red cedar (*Juniperus virginiana*), silverthorn (*Elaeagnus pungens*), American holly (*Ilex opaca*), and red maple (*Acer rubrum*). Dominant woody vine and herbaceous species observed included common greenbrier (*Smilax rotundifolia*), muscadine (*Vitis rotundifolia*), Chinese privet, and common chickweed (*Stellaria media*).

Soils

According to the USDA-NRCS Web Soil Survey and the Soil Survey for Greenville County, the soil series listed on the site include non-hydric soils Cecil-Urban Land Complex (CuC) and Pacolet Sandy Loam (PcE).

An upland data point was taken within the stormwater detention pond and on the lowest portion of the site. Soil characteristics observed included 10YR 6/3 loam soils (non-hydric) 7.5YR 5/8 loamy sand soils (non-hydric), and 10YR 4/3 loamy sand soils (non-hydric).

Hydrology

Evidence of wetland hydrology (saturation, high water table, water-stained leaves, geomorphic position, etc.) was not observed on the site.

One man-made non-jurisdictional feature (stormwater detention pond) was observed on the southwestern portion of the site. A Greenville County Tax Plat depicting the stormwater pond is attached in the appendix (Exhibit 7).

♦ Findings

Based on the literature review and site reconnaissance, one non-jurisdictional feature (NJF-1) was observed on the southwestern portion of the site. Total acreage of NJF-1 is approximately 0.423 acre.

♦ Limitations

Please note this is a preliminary effort designed to provide a representation of the approximate locations of potential wetlands, streams, and open waters on the site. This assessment should be used for conceptual planning purposes only. The USACE is the only authority in South Carolina that certifies the presence or absence of wetlands. This preliminary assessment has not been coordinated with or verified by the USACE or the South Carolina Department of Environmental Services (SCDES).

♦ Closing

S&ME appreciates the opportunity to perform this Jurisdictional Waters Assessment for this project. Please contact us at (803) 561-9024 with questions regarding this report, or if you require additional information.

Sincerely,

S&ME

Edward Brantley
Staff Scientist
edbrantley@smeinc.com

Chris Daves, P.W.S.
Principal Scientist
cdaves@smeinc.com

Qualifications

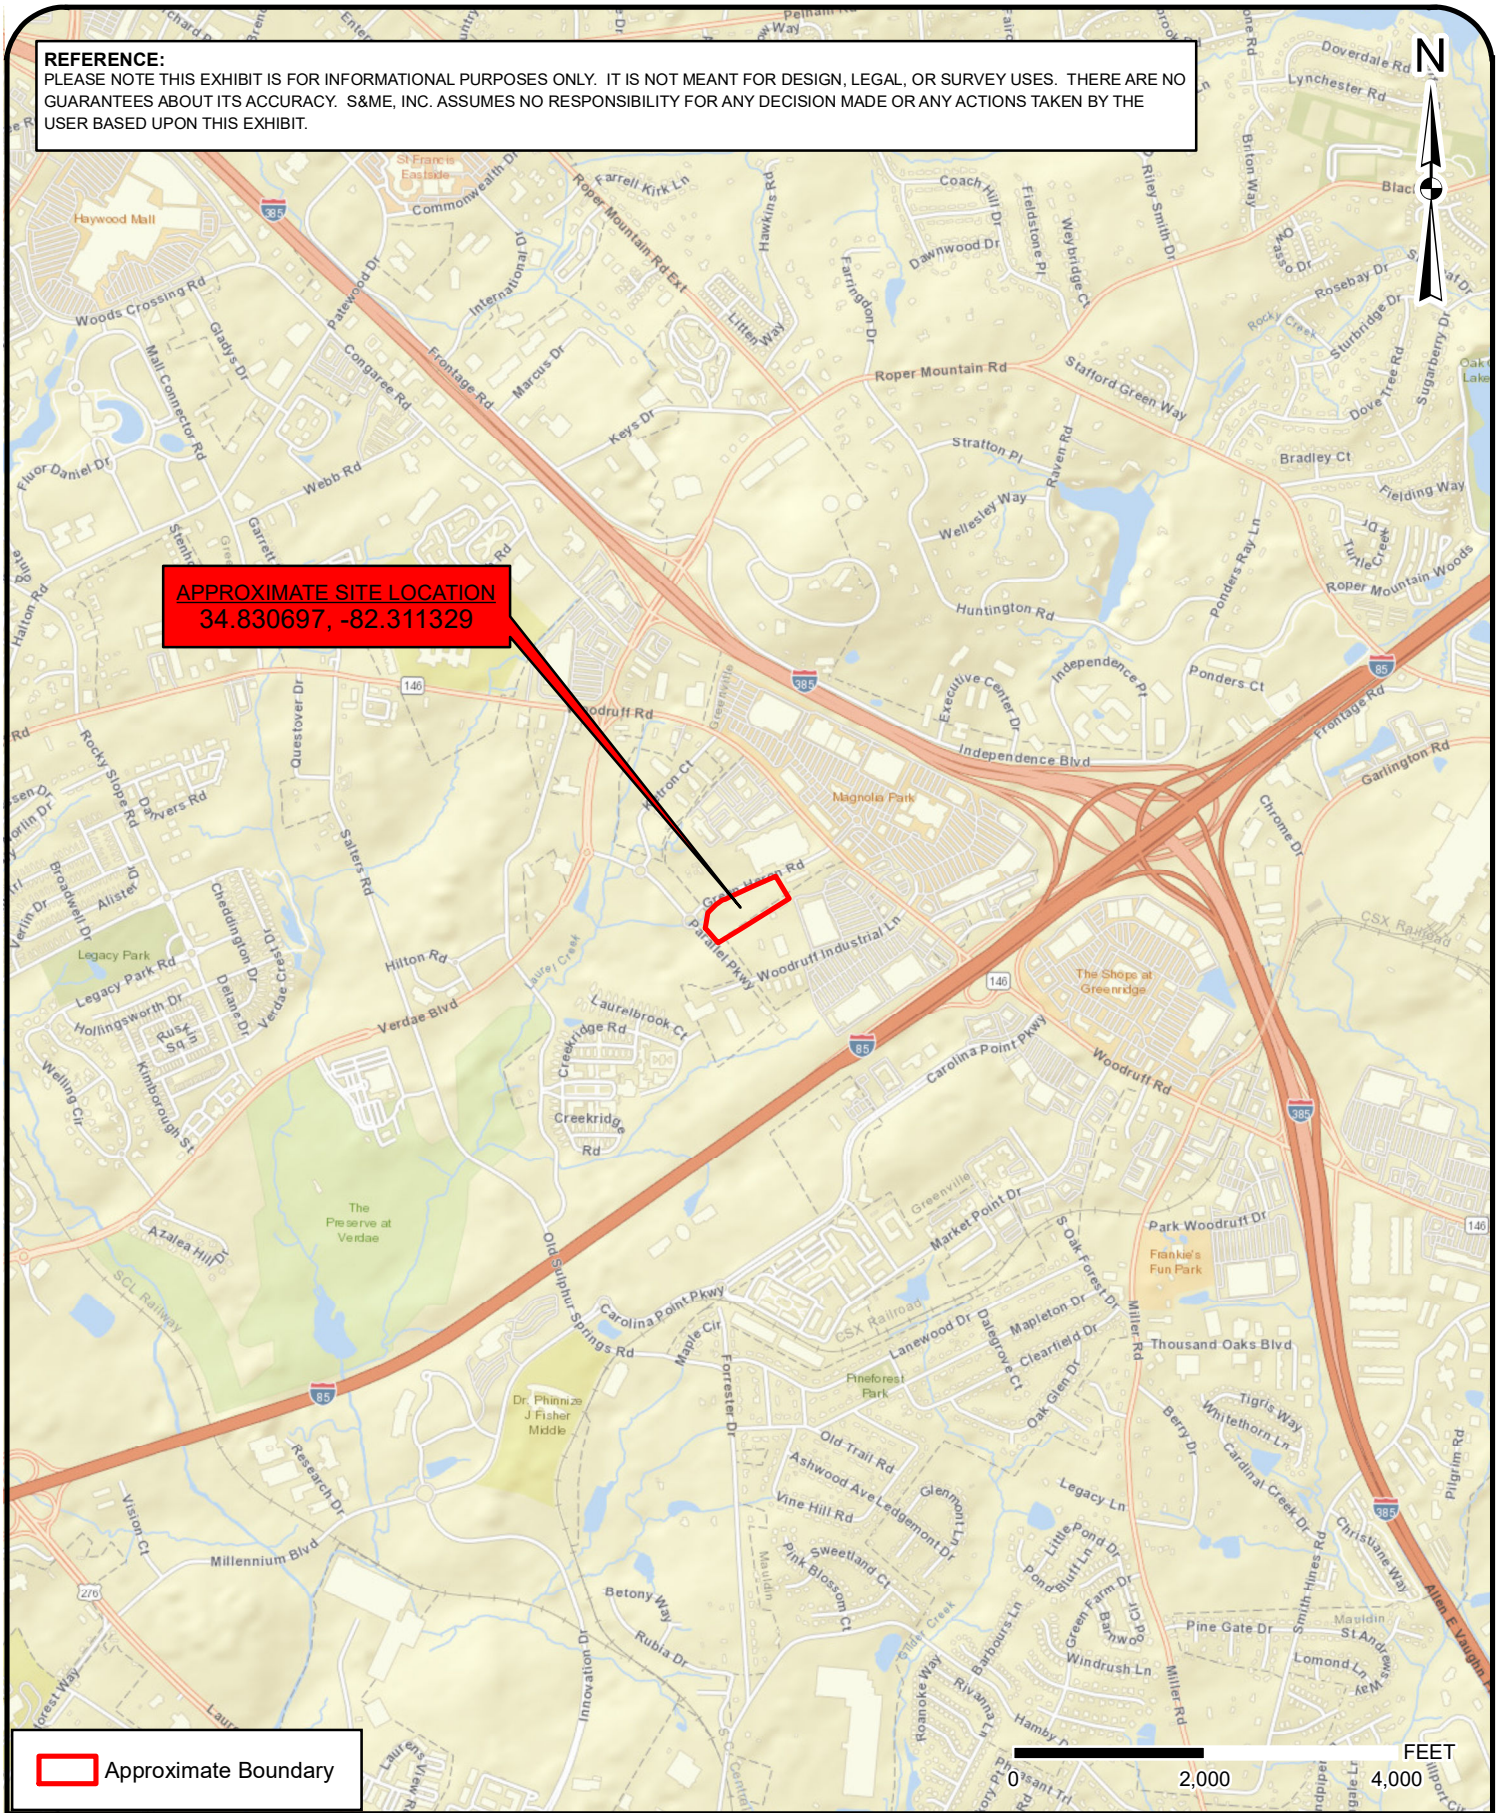

The field survey was overseen by Chris Daves of S&ME. Mr. Daves is a Principal Scientist with over 25 years of experience in environmental consulting. Mr. Daves is proficient in conducting wetland delineations, environmental permitting activities, habitat assessments, and protected species surveys. He is a Professional Wetland Scientist (P.W.S.) and holds a B.S. degree in Biology from Wofford College and a Master's degree in Earth and Environmental Resources Management from the University of South Carolina.

FACU species	10	x 4 =	40
UPL species	5	x 5 =	25
Column Totals:	40 (A)		140 (B)

Prevalence Index = B/A = 3.50

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Five Vegetation Strata:

Tree – Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling – Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody Plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb – All herbaceous (non-woody) plants, including herbaceous vines, regardless of size, and woody plants, except woody vines, less than approximately 3 ft (1 m) in height.

Woody Vine – All woody vines, regardless of height.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks: (Include photo numbers here or on a separate sheet.)
Hydrophytic vegetation was not observed.

Attention: Mr. Joseph Kass, NHE Development Manager
jkass@nhe-inc.com

Reference: **Phase I Environmental Site Assessment**
Green Heron Road Site
Greenville, Greenville County, South Carolina
S&ME Project No. 26610087

Dear Mr. Kass:

S&ME, Inc. (S&ME) has completed a Phase I Environmental Site Assessment (Phase I ESA) on the approximately 6.44-acre parcel located south of Green Heron Road in Greenville, Greenville County, South Carolina (i.e., "subject property"). The attached report presents the findings of S&ME's Phase I ESA which was performed in accordance with ASTM E 1527-21 and S&ME Proposal No. 26610087 dated February 6, 2026. The purpose of this Phase I ESA was to identify, to the extent feasible, *recognized environmental conditions* in connection with the subject property.

ASTM E 1527-21 states that a Phase I ESA "meeting or exceeding" this practice and completed less than 180 days prior to the date of acquisition or intended transaction is presumed to be valid if the report is being relied on by the User for whom the assessment was originally prepared and the following components were completed: interviews, the regulatory review, site visit, and the declaration by the Environmental Professional responsible for the assessment. Please refer to Section 1.5 of this report for the viable start date for this Phase I ESA.

S&ME appreciates the opportunity to provide our services on this project. Please contact us at your convenience if there are questions regarding the information contained in this report.

Sincerely,

S&ME, Inc.

Edward Brantley

Phase I Environmental Site Assessment

GREEN HERON ROAD SITE
GREENVILLE, GREENVILLE COUNTY, SOUTH CAROLINA

Executive Summary

S&ME, Inc. (S&ME) has completed a Phase I Environmental Site Assessment (Phase I ESA) for the Green Heron Road site located at the northeast corner of Green Heron Road and Parallel Parkway in Greenville, Greenville County, South Carolina (the "subject property"). The following executive summary is intended as an overview of the Phase I ESA, for the convenience of the reader. The complete report should be reviewed in its entirety prior to making decisions regarding this site.

The subject property is estimated to contain approximately 6.44 acres and is identified as Greenville County tax parcel number 0547010100205, currently owned by Verdae Properties Inc. The subject property consists of wooded land and a stormwater detention pond. Ingress and egress to the subject property are via Green Heron Road north of the subject property.

According to information reviewed by S&ME, the subject property consisted of wooded and agricultural land with an apparent residential structure from approximately 1935 to approximately 1964. Wooded land and an apparent sewage lagoon (closed in 1978) was observed on aerial photographs from approximately 1976 to 1984. The subject property currently consists of wooded land and a stormwater detention pond. Adjoining properties consist of International Vitamin Corporation (industry), Candlewood Suites (hotel), Target, Piedmont Natural Gas, and the Hamilton Townes at Verdae (residential).

S&ME contracted Lightbox to conduct an environmental database search of the subject property and the surrounding area, and Lightbox provided the EDR Radius Map Report with Geocheck® (EDR Report) as the environmental database report. The subject property was not identified in the EDR Report. The EDR Report identified multiple off-site listings of potential environmental concern within the applicable search radii of the subject property. Due to the presence of volatile organic compounds (VOCs) (tetrachloroethylene) in soil and groundwater, the north adjoining, formerly named, Nutra Manufacturing LLC/General Nutrition Inc. facility is considered a Recognized Environmental Condition (REC) and a Vapor Encroachment Condition (VEC) in connection with the subject property. Due to distance from subject property, regulatory status, and/or topographic groundwater flow, the remaining facilities are not considered RECs in relationship to the subject property.

Mr. Edward Brantley of S&ME, under the guidance of Mr. Chris Daves, P.W.S. and Tom Behnke, P.G., conducted a site reconnaissance of the subject property on March 3, 2026. The site reconnaissance was performed by walking accessible areas of the subject property. The subject property is wooded, undeveloped land. A dry stormwater detention pond was observed on the southwestern portion of the subject property. No evidence of hazardous materials or environmental concerns was observed on the subject property.

This assessment did not identify controlled recognized environmental conditions (CRECs), historical environmental conditions (HRECs), or significant data gaps in connection with the subject property. However, the former Nutra Manufacturing LLC/ General Nutrition Inc. facility north and adjoining to the subject property **is considered a REC and VEC i**n connection with the subject property, due to the potential impact from volatile organic compounds contamination (tetrachloroethylene) in groundwater.

1.0 Introduction

S&ME conducted a Phase I ESA of the Green Heron Road site located at the northeast corner of Green Heron Road and Parallel Parkway in Greenville, Greenville County, South Carolina (the "subject property") (**Appendix I, Figures 1-3**). The subject property is estimated to contain approximately 6.44-acre. The Phase I ESA was conducted using the ASTM International (ASTM) E 1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and in accordance with S&ME Proposal No. 26610087 dated February 6, 2026.

1.1 Purpose

The goal of the Phase I ESA process is to identify, pursuant to ASTM E 1527-21, *recognized environmental conditions* in connection with the subject property. It is S&ME's understanding that the Phase I ESA is being conducted as part of due diligence activities for the future transfer of title.

The following pertinent definitions to this Phase I ESA are provided in ASTM E 1527-21:

- *Recognized Environmental Condition* (REC) - (1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*.
- *Controlled Recognized Environmental Condition* (CREC) - a *recognized environmental condition* affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *activity and use limitations* or *other property use limitations*).
- *Historical Recognized Environmental Condition* (HREC) - a previous *release of hazardous substances* or *petroleum products* affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted user criteria established by the applicable regulatory authority or authorities without subjecting the *subject property* to any controls (for example, *activity and use limitations* or other *property use limitations*). A *historical recognized environmental condition* is not a *recognized environmental condition*.
- *Business Environmental Risk* (BER) - a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of *commercial real estate*, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope-of-services considerations, some of which are identified in Section 13 of ASTM E1527-21.
- *De minimis condition* - a condition related to a *release* that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a *recognized environmental condition* nor a *controlled recognized environmental condition*.

1.2 Detailed Scope of Services

1.2.1 ASTM E 1527-21

S&ME's approach to performing this Phase I ESA consisted of four major tasks in accordance with ASTM Standard Practice E 1527-21.

Task 1 - A review of reasonably ascertainable public records for the subject property and the immediate vicinity was conducted. This review was performed to characterize environmental features of the subject property and to identify past and present land use activities, on or in the vicinity of the subject property, which may indicate a potential for RECs. The review of the reasonably ascertainable public records included:

1. Review of federal, state, tribal, and reasonably ascertainable local public records for the subject property and immediate vicinity.
2. Review of the standard historical sources: aerial photographs, fire insurance maps, local street directories, topographic maps, building and tax department records, interviews, and other relevant standard historical sources for the subject property and adjoining properties for evidence indicating the presence of RECs in connection with the subject property.
3. Review of land title records, including a copy of the current deed, back to 1940 or first developed use, whichever is earlier, if the documents are provided to S&ME by the Phase I ESA User.

Task 2 - A site reconnaissance was performed to identify visible signs of past or existing contamination on or adjacent to the subject property as visually observed from the subject property or public right-of-way. This reconnaissance was also performed to evaluate evidence found in our public record review that might indicate activities resulting in hazardous substances or petroleum products being used or deposited on the subject property. The site reconnaissance included the following activities:

1. A reconnaissance of the subject property and adjacent properties was performed to look for evidence of current and past property uses, signs of spills, stressed vegetation, buried waste, underground or above ground storage tanks (USTs or ASTs), subsidence, transformers, or unusual soil discoloration which may indicate the possible presence of contaminants on the properties.
2. The site reconnaissance involved a viewing of the periphery of the subject property and a walk-through of accessible areas of the site interior.
3. Areas of the subject property were photographed to document the current use(s) of the subject property, as well as conditions such as unusually discolored soil, stressed vegetation, or other significant features associated with the subject property.

Task 3 - Interviews with past and present property owners (if available), operators, occupants and appropriate local officials were conducted to consider any local knowledge of hazardous substances or petroleum products on the subject property or on adjacent properties.

Task 4 - Report preparation.

1.2.2 Exclusions from and Additions to Scope of Services

Unless specifically authorized as an addition to the Phase I ESA work scope, the assessment does not include sampling of environmental media (i.e., soil, surface water, soil gas, groundwater or air). In addition, unless specifically authorized, the Phase I ESA scope of services does not include ASTM E1527-21 non-scope considerations, including but not limited to:

- assessment of business risk issues such as asbestos-containing materials (ACMs).
- biological agents, cultural/historic resources.
- ecological resources.
- endangered species.
- health/safety.
- regulatory compliance.
- indoor air quality including any assessment of vapor intrusion, with the exception of the Vapor Encroachment Screening as discussed in Section 4.6.
- industrial hygiene; lead-based paint (LBP).
- lead in drinking water.
- mold, fungi or bacteria in buildings.
- polychlorinated biphenyls (PCBs).
- naturally occurring radon.
- substances not defined as hazardous substances per 40 CFR 312.
- or wetlands.

1.3 Significant Assumptions

Information obtained from the Client, the Client's representatives, individuals interviewed, and prior environmental reports was considered to be accurate unless S&ME's reasonable inquiries clearly revealed otherwise.

The groundwater within the local geologic province is typically contained in an unconfined (water table) aquifer. The slope of the water table under static conditions (no pumping interference) often approximates the land surface topography. Thus, the interpreted groundwater flow direction is assumed to be approximately the same as the topography of the ground surface. Perennial surface waters (creeks, streams, rivers, ponds, etc.) are assumed to act as discharge features for groundwater flow.

1.4 Limitations and Exceptions of Assessment

The Phase I ESA was conducted using ASTM E 1527-21. The findings of this report are applicable, and representative of conditions encountered at the subject property on the date of this assessment and may not represent conditions at a later date. The review of public records was limited to that information which was available to S&ME at the time this report was prepared. Interviews with local and state government authorities were limited to those people whom S&ME was able to contact during the preparation of this report. Information was derived from "reasonably ascertainable" and "practically reviewable" sources in compliance with our understanding of the standards set forth by ASTM E 1527-21.

Unless provided by the User, land title and judicial records were not reviewed for environmental liens or activity and use limitations (AULs) by S&ME.

1.5 User Reliance

The User of this report is NHE. Use of this report by third parties will be at such party's sole risk except when granted under written permission by S&ME. Any such authorized use or reliance by third parties will be at the sole discretion of S&ME and subject to the same Agreement under which the work was conducted for the User.

The additional party's use and reliance on the report will be subject to the same rights, obligations, and limitations imposed on the User by our Agreement, unless otherwise agreed; however, the total liability of S&ME to all parties of the Phase I ESA shall be limited to the remedies and amounts as provided in the Agreement as a single contract. The additional party's use and reliance on the report shall signify the additional party's agreement to be bound by the proposal and contract that make up the Agreement between S&ME and the User.

According to standards set forth by ASTM E 1527-21, certain components of the Phase I ESA will expire 180 days from the date of initiation of that component and will therefore require updating if the date of use exceeds these time periods. The following table lists the dates of initiation for pertinent components on this assessment:

Table 1-1 – Dates of Initiation for Phase I ESA Components

Component	Date of Initiation
Environmental Database Search	March 2, 2026
Site Reconnaissance	March 3, 2026
Interviews	March 16, 2026
Environmental Lien Search	Not Provided
Environmental Professional Declaration	Date of Report

2.0 General Site Description

2.1 Site Location

The approximate 6.44-acre subject property is located south of Green Heron Road at the northeast corner of Green Heron Road and Parallel Parkway in Greenville, Greenville County, South Carolina. The location of the subject property is shown on **Figures 1-3** in **Appendix I**.

The following table summarizes the information associated with the tax parcel that comprises the subject property:

Table 2-1 – Tax Parcel Information

Parcel ID	Acreage	Street Address	Owners
0547010100205	6.44	Green Heron Road Greenville, SC	Verdae Properties Inc.

2.2 Site and Vicinity Characteristics

The subject property is located south of Green Heron Road in Greenville, Greenville County, South Carolina. The subject property consists of wooded land. Property usage in surrounding areas of the subject property includes a mixture of industrial, residential, commercial (hotel and shopping center), and utility developments.

3.0 User-Provided Information

Certain information identified in ASTM E 1527-21 is to be provided by the User of this report. S&ME provided a User Questionnaire with our proposal, and the questionnaire was completed on February 24, 2026, by Mr. Joseph Kass, at NHE. A copy of the completed User Questionnaire is included in **Appendix VI**.

3.1 Title Records

The User did not provide S&ME with title records for review.

3.2 Environmental Liens or Activity and Use Limitations

Review of AULs and environmental liens by the Environmental Professional can help in determining if a REC is associated with the subject property. AULs can include both institutional and engineering controls and are often recorded in land title records in the restrictions of record rather than a typical chain-of-title or title abstract. According to ASTM E 1527-21, the User is responsible for providing land title (federal, state, tribal, and local) records that describe environmental liens or AULs back to 1980. Mr. Kass indicated on the User Questionnaire that he was not aware of AULs or liens against the subject property.

3.3 Specialized Knowledge

Mr. Kass indicated on the User Questionnaire that there is a sanitary sewer line running northeast to southwest on the right side of the subject property.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information about the subject property within the local community that was material to RECs in connection with the subject property was reported to S&ME on the User Questionnaire by Mr. Kass.

3.5 Valuation Reduction for Environmental Issues

Mr. Kass indicated on the User Questionnaire that this Phase I ESA was being conducted as due diligence to aid the development of affordable multi-family new construction. He indicated the purchase price for the subject property reflects fair market value.

3.6 Owner, Property Manager, and Occupant Information

According to Greenville County property records, the owner of the subject property is Verdae Properties Inc. A site contact for the owner (Verdae Properties, Inc., Ms. Pam Prashad) was provided. The subject property does not currently have occupants.

3.7 Reason for Performing the Phase I ESA

This Phase I ESA is being conducted as due diligence before development. The purpose of the Phase I ESA is to identify, pursuant to ASTM E 1527-21, RECs, CRECs, and HRECs in connection with the subject property.

3.8 Other

A 2013 Phase I ESA by Atlantic Environmental Services for the subject property was provided by the User.

4.0 Records Review

This section summarizes records obtained and reviewed to help identify RECs, HRECs, and CRECs in connection with the subject property.

4.1 Standard Environmental Record Sources

S&ME reviewed selected federal and state regulatory lists within an *approximate minimum search distance* of the subject property, as defined by ASTM E 1527-21. The reviewed lists were compiled by LightBox into the EDR Report, which is included in **Appendix II**. The EDR Report includes a listing of the databases, search distances, an explanation of each database, and figures depicting the approximate locations of regulated facilities identified in the vicinity of the subject property. Regulatory listings are limited and include only those facilities or incidents that are known to the federal and state agencies at the time of publication of various agency databases, as indicated in the EDR Report.

The subject property was not identified in the database searches presented in the EDR Report. Multiple off-site listings of potential environmental concern were noted in the EDR Report.

Table 4-1 Database Search Results Summary (Standard Records Sources)

Facility	Location Direction/ Distance Topographic Relationship	Record	Comment
Nutra Manufacturing LLC/ General Nutrition Inc.	1050 Woodruff Road North adjoining Cross-gradient	RCRA-LQG, SC SHWS, SC VCP, SC ALLSITES, ICIS, US AIRS, E Manifest, SC Asbestos, & SC GWT	Large quantity generator of hazardous waste. Multiple violations reported. Current Voluntary Cleanup Program (VCP). See **Section 4.1.1** for more details.
Target Store T1182/CVS Pharmacy	1112 Woodruff Road Southeast adjacent Cross-gradient	RCRA-VSQG, RCA-SQG, E Manifest, & SC Manifest	Small and very small quantity generator of hazardous waste. Multiple violations report for handling of hazardous waste. Violations have since returned to compliance.
Piedmont Natural Gas	100 Woodruff Industrial Lane South adjacent Up-gradient	SC UST, SC LUST, RCRA-VSQG, & E Manifest	Former Underground Storage Tank (UST) facility. One 500-gallon diesel fuel UST and one 10,000-gallon gasoline UST abandoned in 1990. One 550-gallon diesel UST and one 10,000-gallon gasoline UST abandoned in 2011. Release reported in 1990. Received No Further Action (NFA) status in 2012.
Amoco Station 256	1100 Woodruff Road 500 ft NE Up-gradient	SC UST, SC LUST, SC RCR, & SC GWCI	Former UST facility. One 550-gallon kerosine and five 6,000-gallon gasoline USTs abandoned in 1993. Release reported in 1988. Received NFA status in 1998.
UST Unknown 12839	121 Woodruff Road 625 ft. SW Down-gradient	SC UST	Former UST facility. One 500-gallon multiple hydrocarbon UST abandoned in 1990. No reported releases.
UPS Truck Leasing	1040 Woodruff Road 625 ft. N Cross-gradient	SC UST & SC LUST	Former UST facility. One 550-gallon waste oil UST and one 10,000-gallon diesel UST abandoned in 1991. One 10,000-gallon diesel UST abandoned in 1996. Two releases reported in 1991 and 1996. Received NFA status in 1994 and 1996, respectively.

Facility	Location Direction/ Distance Topographic Relationship	Record	Comment
Montgomery Ward	1025 Woodruff Road 950 ft. NNE Cross-gradient	SC UST & SC LUST	Former UST facility. One 500-gallon waste oil UST abandoned in 1993. Release reported in 1993. Received NFA status in 1995.

An additional 26 sites were identified in the EDR report. These facilities, as well as the facilities listed above, do not appear to pose a material threat of contamination to the subject property based on spatial distance, apparent direction of groundwater flow, and regulatory status.

The EDR report contains an Orphan Summary which are sites that cannot be located by EDR due to incomplete address information. Four additional facilities were identified that are believed to be within the specified search radius. Due to distance from the subject property, regulatory status, and/or groundwater flow, these facilities do not pose a material threat to the subject property.

4.1.1 Regulatory File Review

Based on current information and nearby regulated facilities the Environmental Professional in charge of this Phase I ESA determined a state agency file review for two off-site facilities was necessary. S&ME requested a state agency (SCDES) file review for the Nutra Manufacturing LLC/General Nutrition Inc. and Piedmont Natural Gas facilities via Freedom of Information Act (FOIA) requests. A summary of findings is presented below. Relevant reports and documentation are provided in **Appendix VI**.

Nutra Manufacturing LLC/General Nutrition Inc.

S&ME obtained a November 2013 Investigation Report and March 2025 Annual Assessment Report, prepared by Natural Resource Engineering Inc. and Bunnell Lammons Engineers (BLE), respectively, for the Nutra Manufacturing LLC/General Nutrition Inc. facility located north and adjoining across Green Heron Road to the subject property. The reports indicated that groundwater direction is west/southwest, cross-gradient relative to the subject property. According to the 2025 report completed by BLE, concentrations of tetrachloroethylene (PCE) were reported in groundwater samples, surface water samples, and vapor samples on this property. The groundwater monitoring well nearest to the subject property (MW-3) was reported to have a PCE concentration of 0.86J micrograms/liter (below SCDES Maximum Contaminant Level). Surface water samples taken downgradient of the subject property (SW-1 through SW-4) contained a PCE concentrations of <0.29 to 1.4 micrograms/liter. Vapor was sampled as well to ascertain the extent of vapor contamination. Two samples were taken within Area of Concern (AOC) regarding vapor contamination. The two samples (VP-6 and VP-8) contained PCE concentrations of 2,710 and 289 micrograms per cubic meter. Due to the presence of vapor contamination within the AOC, the Nutra Manufacturing LLC/General Nutrition Inc. facility **is considered a VEC**. Accordingly, presence of a VEC **is considered and a REC** due to the high concentrations of PCE reported in nearby vapor samples.

Piedmont Natural Gas

SCDES provided a copy of the No Further Action (NFA) letter dated November 6, 2012. According to the NFA letter, laboratory analyses of soil samples were below established Risk Based Screening Levels (RBSLs). SCDES also provided a September 2012 Initial Groundwater Assessment (IGWA) Report by Terracon Consultants, Inc. According to the IGWA report, shallow bedrock conditions were encountered while attempting to install monitoring wells. No groundwater was detected in the soil borings above the competent bedrock. As such, soil samples were taken near the intended location of MW-1 boring and MW-1 offset boring. Due to the presence of an NFA letter, the Piedmont Natural Gas facility **is not considered a REC**. Subsequently, a VEC does not exist.

4.2 Additional Environmental Record Sources

4.2.1 EDR Supplementary Sources

The EDR Report includes additional environmental records not listed among the standard federal, state, and tribal databases, such as historical auto stations, historical dry cleaners and manufactured gas plants.

No additional or supplementary environmental records were listed in the EDR Report.

4.2.2 Tribal Record Sources

The EDR Report did not reveal listings of tribal environmental records.

4.2.3 Other Record Sources

- A search of the Environmental Protection Agency (EPA) Envirofacts database (https://enviro.epa.gov/) was conducted. No other information was available.
- South Carolina Department of Environmental Services (SCDES) Underground Storage Tank (UST) Registry Search: (https://apps.dhec.sc.gov/Environment/USTRegistry).
- A search of SCDES Bureau of Land and Waste management Public Records Locator Tool (https://sc-dhec.maps.arcgis.com/apps/webappviewer/index.html?id=1b0f291a19d14159a143c8a738673fbc) was conducted. No further information was available.
- Phase I ESA by Atlantic Environmental Services, The Heron at Verdae, February 21, 2013.

S&ME was provided a copy of a previous Phase I ESA conducted by Atlantic Environmental Services on the subject property dated February 21, 2013. According to the previous Phase I ESA, the on-site stormwater detention pond was formally used as a sewage lagoon but was closed out in 1978. The previous Phase I ESA provided a letter from SCDES from 2005 that provided documentation of a NFA status for the former sewage lagoon. A REC was reported in connection to the northern adjacent Nutra Manufacturing facility. A limited Phase II Investigation was recommended to determine if the conditions at the Nutra Manufacturing facility had impacted the subject property.

Polyfluoroalkyl Substances (PFAS)

On May 8, 2024, the United States Environmental Protection Agency (EPA) published a final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) – as CERCLA hazardous substances. The final rule became effective on July 8, 2024. Based on this action by EPA, Phase I ESAs completed in accordance with ASTM E1527-21 after July 8, 2024, must include PFOA and/or PFOS during the evaluation of RECs.

Potential sources of PFAS can include (but not limited to) chrome plating facilities, textile and leather production, electronics manufacturing, automotive and machinery maintenance, oil refineries, and aerospace facilities.

The following internet sources were reviewed regarding PFAS:

- EPA: https://www.epa.gov/pfas.
- SCDES: Ambient Surface Water PFAS Monitoring: https://gis.des.sc.gov/pfas/.
- EWG – Suspected Industrial Discharges of PFAS: https://www.ewg.org/interactive-maps/2021_suspected_industrial_discharges_of_pfas/map/.
- EWG – Tap Water Database: https://www.ewg.org/tapwater/.
- City of Greenville: 2024 Water Quality Report: https://www.greenvillewater.com/documents/2024-CCR-FINAL.pdf.

During our review of available resources, consideration for the potential impact of PFOA and PFOS to the subject property was assessed. It is the opinion of the Environmental Professional that based on the current and historical uses of the subject property, adjoining and surrounding properties, the likelihood of PFOA and PFOS impacts to the subject property is low and therefore does not constitute a REC.

No additional records were reviewed during this Phase I ESA

4.3 Physical Setting Sources

Physical setting sources were reviewed to provide information about the geology and hydrogeology of the area of the subject property.

Surface Drainage and Soil

Based upon a review of the topographic map, it appears that the subject property slopes slightly downward towards the southwest (see **Figure 2,** United States Geological Survey [USGS] Topographic Map, **Appendix I**). The subject property has an estimated surface elevation of approximately 966-1,006 feet above mean sea level.

The United States Department of Agriculture (USDA) Soil Survey website was reviewed to identify the soil type underlying the subject property. A review of the information presented on the website indicated that the majority of the subject property as being underlain by the following soils:

Table 4-3 – Site Soils

Soil Series	Drainage	Runoff Class	Typical Depth to Water
Cecil-Urban Land Complex (CuC) (2-10 percent slopes)	Well drained	Low	>80 inches
Pacolet Sandy Loam (PcE) (15-25 percent slopes)	Well drained	Negligible	>80 inches

Depth to a restrictive feature is typically greater than 80 inches. These depths can vary significantly as the result of past site grading activities on the subject property.

Bedrock

Bedrock was not observed on the subject property.

Hydrogeology

According to the *Geology of the Carolinas,* (Horton, Jr. J. Wright and Zullo A. Victor, University of Tennessee Press, 1991), the subject property lies in the Piedmont Physiographic Province. The Piedmont is characterized by rolling relief drained by numerous creeks. Generally, soils in the Piedmont formed by the weathering of the underlying rock. Parent material is felsic/mafic residuum weathered from metamorphic and igneous rocks, including gneiss, schist, and granite. In the general area of the subject property, the soils are gently sloping or sloping sandy loams or loamy sands with red, brown, or yellow subsoil.

In the Piedmont Province, the soils typically have moderate to rapid permeability; thus, readily transmitting groundwater. The movement of groundwater through the sands and clays is strongly influenced by topography which generally controls the location of recharge and discharge zones. Groundwater within the Piedmont generally moves from topographically high areas (recharge zones) to topographically low areas within and along stream valleys (discharge areas).

4.4 Historical Use Information on the Subject Property

S&ME reviewed historical use information from LightBox and other sources as part of this Phase I ESA. The following documents were reviewed:

- Aerial Photographs for the years 1938, 1943, 1951, 1955, 1961, 1964, 1976, 1978, 1981, 1985, 1989, 1994, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, and 2025.
- Historical Sanborn Fire Insurance Maps were not available for the subject property.
- Local Street Directories for the years 1985, 1990, 1992, 1995, 2000, 2005, 2010, 2014, 2017, 2022, and 2024.
- Topographic maps for the years 1935, 1938, 1957, 1983, 2014, 2017, 2020, and 2024.

- Building Records.
- Zoning/Land Use Records.
- Land Title Records.
- Property Tax Files.

Historical information is included in **Appendix III**. S&ME's historical document review findings for the subject property are presented in the following table.

Table 4-4 – Historical Use Summary Table (On-site)

Listing/Observed Feature	Years Found for this Listing	Source(s)
The subject property consists of wooded and agricultural land with an apparent residential structure.	1935-1964	Aerial Photographs and Topographic Maps
The subject property consists of a wooded land and a sewage lagoon on the southwest end of the property as referenced in Section 4.2.3.	1976-1983	Aerial Photographs and Topographic Maps
The subject property consists of wooded land with an apparent man-made pond.	1989-2025	Aerial Photographs and Topographic Maps

4.5 Historical Use Information on Adjoining Properties

Historical information including the above-referenced resources were reviewed to assess off-site historical land uses. S&ME's historical document review findings for adjoining properties are presented in the following table.

Listing/Observed Feature	Years Found for this Listing	Source(s)
North Adjacent Properties North adjacent properties consisted of agricultural land from approximately 1935 to 1964. An apparent industrial facility and pond were first observed in approximately 1976. According to city directories, the north adjacent property located at 1050 Woodruff Road consisted of the following: 1985-2000: General Nutrition 2005-2024: Nutra Manufacturing, General Nutrition, and TAZ Mechanical and Construction.	1935-2025	Aerial Photographs, City Directories, and Topographic Maps
South Adjacent Properties South adjacent properties consisted of wooded and agricultural land from approximately 1935 to 1976, when the land was cleared. An apparent light industrial/commercial structure was first observed in 1989. According to city directories, the south adjacent property located at 100 Woodruff Industrial Lane consisted of Piedmont Natural Gas Company from 2014-2024.	1935-2025	Aerial Photographs, City Directories, and Topographic Maps

Listing/Observed Feature	Years Found for this Listing	Source(s)
East Adjacent Properties East adjacent properties consisted of a structure from approximately 1935 to 1964. Eastern adjacent properties consisted of wooded land with an apparent industrial/commercial structure beyond from 1976 to approximately 1994. According to city directories, the following east adjacent property at 1112 Woodruff Road consisted of Target from 2000 to 2024 and the east adjacent property located at 25 Green Heron Road consisted of Candlewood Suites from 2014 and 2022 and Midas Hospitality from 2017 to 2024.	1935-2025	Aerial Photographs, City Directories, and Topographic Maps
West Adjacent Properties West adjacent properties consisted of wooded and agricultural land from approximately 1935 to 2019, when a road was first observed. Residential structures were observed from 2023 to present day.	1935-2025	Aerial Photographs and Topographic Maps

4.6 Vapor Encroachment Screening

A Vapor Encroachment Screening (VES) of identified potential contaminant sources was performed as part of this Phase I ESA. The conclusions of the VES indicate that a Vapor Encroachment Condition (VEC) **does exist** in connection with the subject property from the adjoining former Nutra Manufacturing facility. The VES completed by S&ME is provided in **Appendix IV**.

5.0 Site Reconnaissance

The site reconnaissance was performed by Mr. Edward Brantley of S&ME under the guidance of Mr. Chris Daves, P.W.S. and Mr. Tom Behnke, P.G., on March 3, 2026. Representative photographs of the subject property and the Site Reconnaissance Checklist are included in **Appendix V**.

5.1 Methodology and Limiting Conditions

The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the subject property. The site reconnaissance was performed by walking accessible areas of the subject property.

5.2 General Site Setting

5.2.1 Current Use(s) of the Subject Property

The subject property currently consists of wooded land (Photographs 1-3) and a stormwater detention pond (Photographs 4-5).

5.2.2 *Past Use(s) of the Subject Property*

An apparent foundation for a residential structure was observed on the northern portion of the subject property (Photograph 6). No other past uses of the subject property were observed.

5.2.3 *Current Use(s) of Adjoining and Surrounding Properties*

The current uses of the adjoining properties were identified to the extent that they were visually observed from the subject property during our field reconnaissance or during interviews or in the records review. Descriptions of adjoining properties are provided below:

- **North**: International Vitamin Corporation (formerly Nutra Manufacturing and General Nutrition. Currently produces private label vitamins and supplements) (Photograph 7).
- **East**: Candlewood Suites and Target (Photograph 8).
- **South**: Piedmont Natural Gas Company (Photograph 9).
- **West:** Parallel Parkway and Hamilton Townes at Verdae (Photograph 10).

5.2.4 *Past Use(s) of Adjoining and Surrounding Properties*

No indications of the previous use of adjoining and surrounding properties were noted during the site reconnaissance.

5.2.5 *Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions*

The subject property is slightly sloping toward the southwest. Observable surface soils consisted of sandy loams. A dry stormwater pond was observed on the southwestern portion of the subject property. No other surface water features were observed.

5.2.6 *Description of Structures and Roads*

No structures or roads were observed on the subject property. Ingress and egress to the subject property are via Green Heron Road to the north of the subject property.

5.2.7 *Potable Water Supply and Sewage Disposal System*

No evidence of municipal sewer or water were observed on the subject property; however, According to Mr. Kass on the User Questionnaire, a sanitary sewer line is located on the northeast and southwest portions of the subject property.

5.3 Exterior Observations

Exterior observations from the site reconnaissance are summarized in the following table.

Table 5-1 – General Exterior Observations

Description	Reported or Observed On-site (Y/N)	Comments (Noteworthy observations are further discussed below the table.)
Hazardous Substances and Petroleum Products	N	
Underground Storage Tanks (USTs)	N	
Aboveground Storage Tanks (ASTs)	N	
Oil/Water Separators	N	
Strong, Pungent, or Noxious Odors	N	
Drums, Barrels and/or Containers > 5 Gallons	N	
Unidentified Substance Containers	N	
Potential Polychlorinated Biphenyls (PCB)-Containing Equipment	N	
Hydraulic Equipment	N	
Utilities and Stormwater Management	N	
Pits, Ponds, Lagoons, and Surface Waters	Y	A stormwater pond was observed on the southwestern portion of the subject property (Photographs 4-5). The pond appeared to be dry during our site reconnaissance.
Surface Water Discoloration, Sheen or Free Product	N	
Stained Soil or Pavement	N	
Stressed Vegetation	N	
Solid Waste	N	
Process/industrial Wastewater Discharges	N	
Wells	N	
Septic Systems	N	
Heating/Cooling	N	
Drains and Sumps	N	
Other	N	

5.4 Interior Observations

No structures were present on the subject property. As such, there were no interior observations.

6.0 Interviews

S&ME contacted individuals and local authorities that may have information concerning existing conditions, activities, and history of the subject property and off-site facilities. Brief summaries of the information from those interviews are discussed below. Copies of interview documentation are included in **Appendix VI**.

6.1 Interview with Past and Present Owners

Ms. Pam Prashad completed an Owner Questionnaire as part of this assessment. Ms. Prashad is a representative of the current owner (Verdae Properties, Inc.). Ms. Prashad provided the following information regarding the subject property:

- She was not aware of AULs or environmental liens on the subject property.
- The purchase price of the subject property did not reflect any suspected environmental contamination.
- She was not aware of any contamination on the subject property.
- She was not aware of past or present USTs/ASTs or land use of residual biosolids located on the subject property.
- She was aware of monitoring wells located on the west adjacent wooded land across Parallel Parkway.

6.2 Interview with Key Site Manager

See Section 6.1.

6.3 Interview with Occupants

The subject property is currently not occupied.

6.4 Interview with Local Government Officials

S&ME contacted SCDES FOIA office multiple times to obtain information regarding nearby facilities. Multiple files were provided by SCDES. **See Section 4.1.1.**

6.5 Interviews with Others

No other interviews were performed for this Phase I ESA.

7.0 Findings and Opinions

The results of the Phase I ESA are summarized in the following sections.

7.1 On-Site Findings

The following on-site finding was identified during this assessment:

- A sewage lagoon was formally located on the southwestern portion of the subject property.

7.2 Off-Site Findings

The following off-site findings were identified during this assessment:

- Multiple off-site listings of potential environmental concern were identified in the EDR Radius Report.

7.3 On-Site Opinions

The following opinion is provided concerning the on-site finding of this assessment:

- According to the previous Phase I ESA conducted by Atlantic Environmental Services in 2013, the former sewage lagoon was closed out in 1978 and received a NFA status from SCDHEC in 2005. Accordingly, the former sewage lagoon is **not considered a REC** at this time.

7.4 Off-Site Opinions

The following opinion is provided concerning the off-site findings of this assessment:

- The Nutra Manufacturing LLC/ General Nutrition Inc. facility is considered a VEC in connection with the subject property. The evidence of PCE vapor contamination within the area of concern **is considered a REC and a VEC**.
- The remaining off-site EDR listings **are not considered RECs** in connection with the subject property due to their regulatory listings, distance from the subject property, the information in the EDR Report, and/or the topographic relationships with the subject property.

7.5 Data Gaps

The following data gap was identified during this assessment:

- Land title and judicial records were not reviewed for environmental liens or AULs; however, the Client reported no knowledge of environmental liens or AULs.

This data gap **is not considered significant** to our ability to identify RECs in connection with the subject property.

8.0 Conclusions

S&ME has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-21 of the subject property located south of Green Heron Road in Greenville, Greenville County, South Carolina. Exceptions to or deletions from this practice are described in **Section 1.4** and **Section 9** of this report.

This Phase I ESA did not identify RECs, CRECs, or significant data gaps in connection with the subject property except for the following:

- The former Nutra Manufacturing LLC/ General Nutrition Inc. facility north and adjoining to the subject property **is considered a REC and VEC** in connection with the subject property, due to the potential impact from volatile organic compounds contamination (tetrachloroethylene) in groundwater.

Based on the information obtained and the findings of this assessment, it is the opinion of the Environmental Professional that further assessment may be warranted.

9.0 Deviations

No deviations from the standard were made.

10.0 Additional Services

No additional services were performed by S&ME.

11.0 References

Material references are cited within the report text, unless listed below.

12.0 Signature(s) of Environmental Professional(s)

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Tom Behnke, P.G.
Senior Reviewer

13.0 Qualification(s) of Environmental Professional(s)

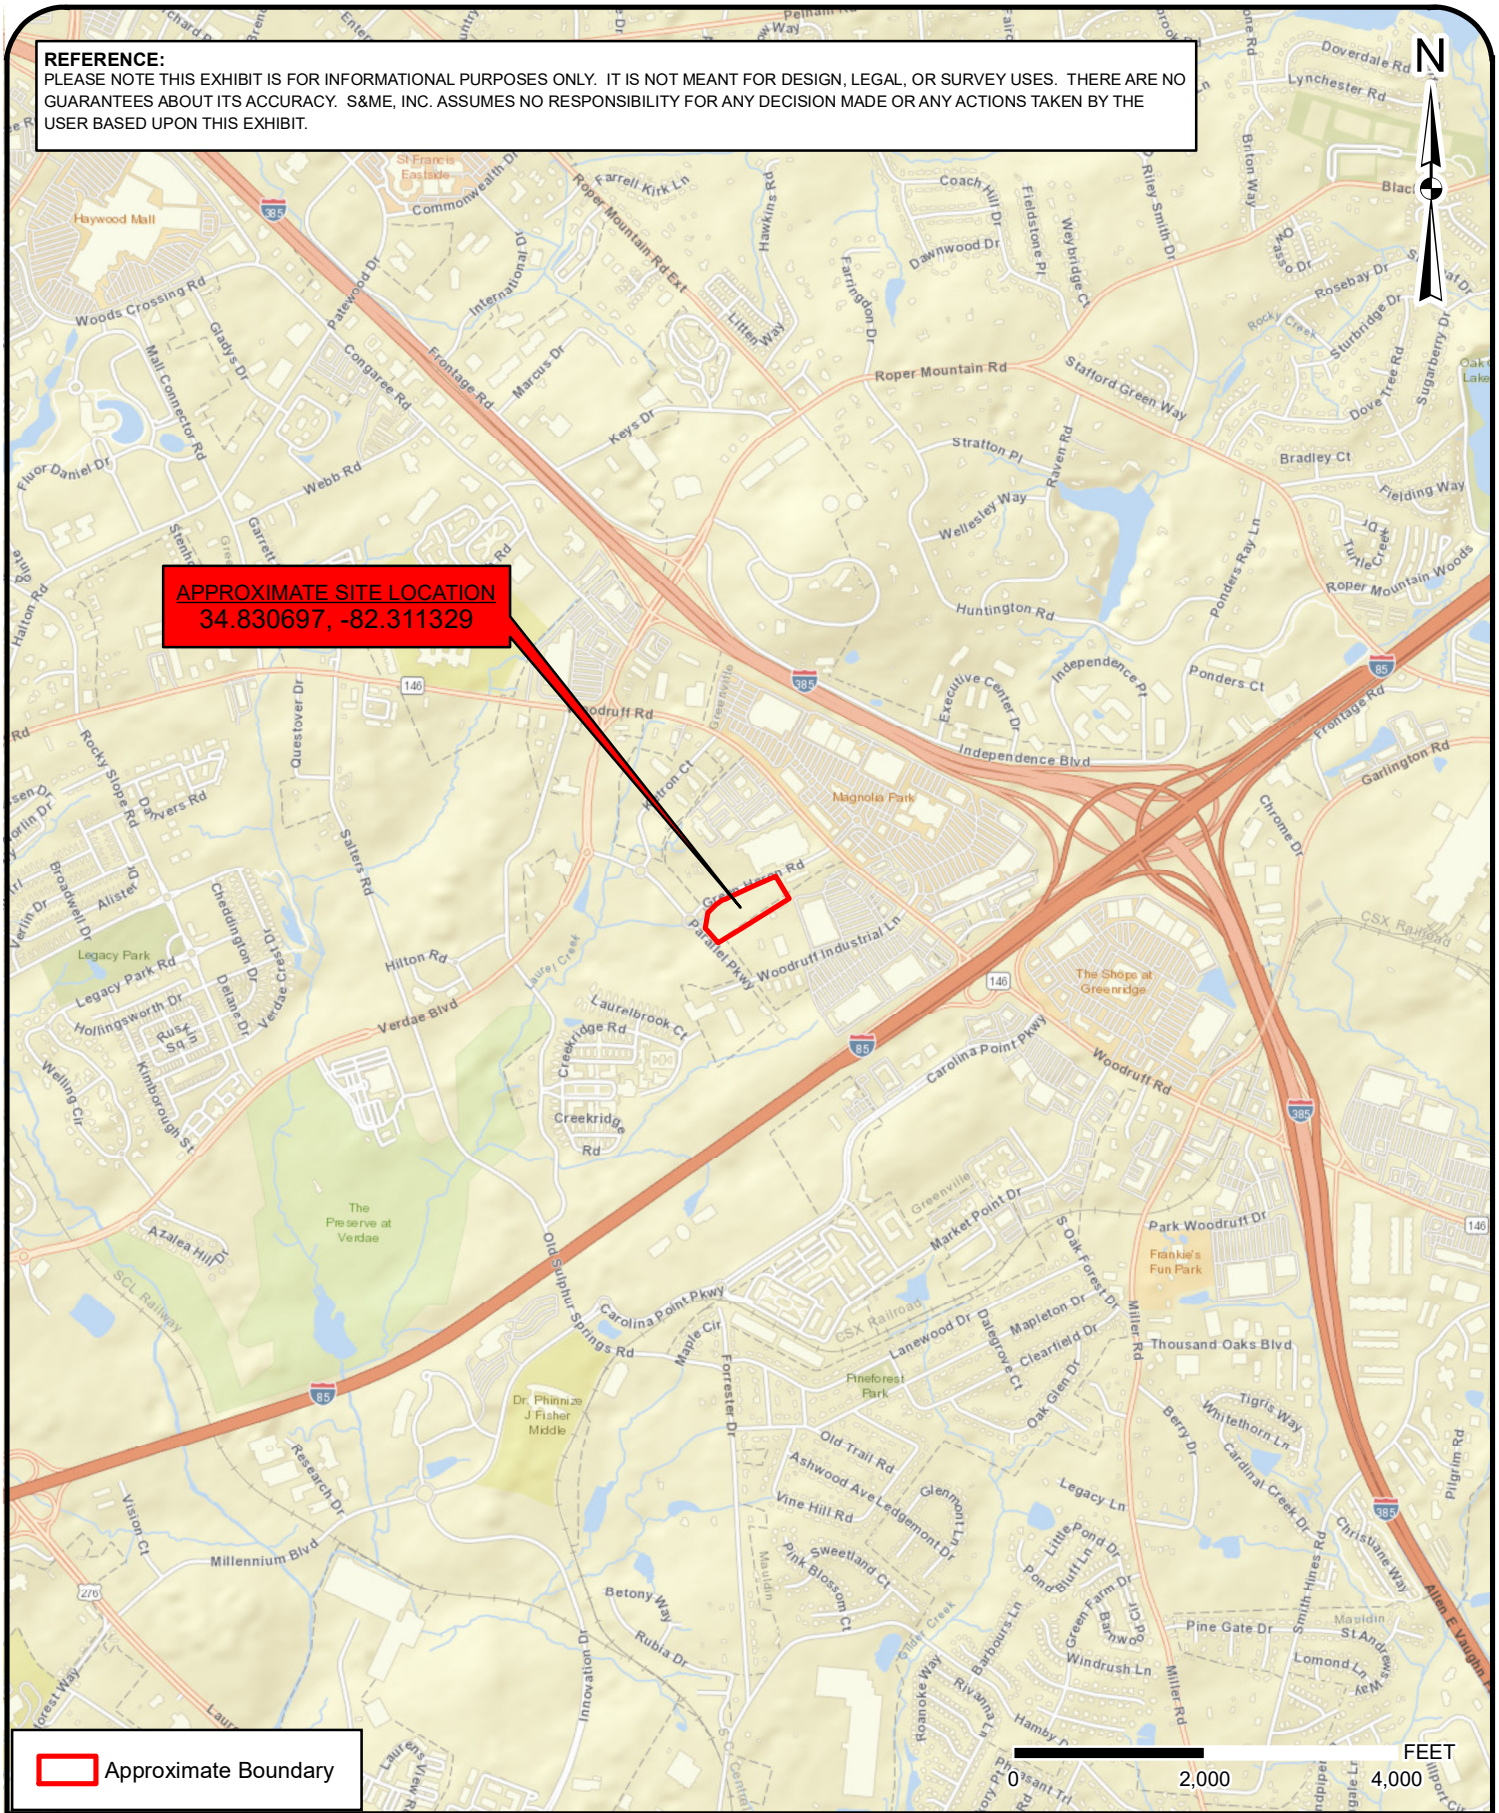

S&ME delivers engineering, design, planning, environmental, and construction services for the built environment. Founded in 1973, we have grown to an 1,100-person corporation operating from 34 offices across the United States.

Qualifications of the Environmental Professionals and staff who contributed to this Phase I ESA are included in **Appendix VIII**.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

NUTRA MANUFACTURING EPA ID:: SCD980839203	***1050 WOODRUFF RD***	***NNE 0 - 1/8 (0.055 mi.)***	***1***	***8***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 7 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

SC SHWS: State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

A review of the SC SHWS list, as provided by EDR, and dated 03/04/2025 has revealed that there are 10 SC SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

SC UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Health & Environmental Control's list: Comprehensive Underground Storage Tanks.

A review of the SC UST list, as provided by EDR, and dated 10/07/2024 has revealed that there are 14 SC UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: 12839
Status: Abandoned

State and tribal institutional control / engineering control registries

SC RCR: The Bureau of Land and Waste Management established this Registry to help monitor and maintain sites that have conditional remedies. A Conditional Remedy is an environmental remedy that includes certain qualifications. These qualifications are divided into two major categories: Remedies requiring Land Use Controls and Conditional No Further Actions.

A review of the SC RCR list, as provided by EDR, and dated 10/01/2024 has revealed that there are 6 SC RCR sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SC ALLSITES: The South Carolina Department of Health and Environmental Control is pleased to have the Public Record for your review. The purpose of this database is two-fold. First, it will provide to communities another form of notice of cleanup activity, allowing them to have more information about assessment and cleanup activities in their area and in the State. Second, it can assist those seeking to redevelop brownfield properties within South Carolina.

A review of the SC ALLSITES list, as provided by EDR, and dated 11/21/2025 has revealed that there are 4 SC ALLSITES sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 14 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D007
Waste Description:	Chromium

NUTRA MANUFACTURING (Continued) 1000212765

Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents

NUTRA MANUFACTURING (Continued) 1000212765

Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code:	P045
Waste Description:	2-Butanone, 3,3-Dimethyl-1-(Methylthio)-, O-[Methylamino]Carbonyl] Oxime (Or) Thiofanox
Waste Code:	P098
Waste Description:	Potassium Cyanide (Or) Potassium Cyanide K(Cn)
Waste Code:	U044
Waste Description:	Chloroform (Or) Methane, Trichloro-
Waste Code:	U122
Waste Description:	Formaldehyde
Waste Code:	U151
Waste Description:	Mercury
Waste Code:	U188
Waste Description:	Phenol
Waste Code:	U197
Waste Description:	2,5-Cyclohexadiene-1,4-Dione (Or) P-Benzoquinone
Waste Code:	U213
Waste Description:	Furan, Tetrahydro-(I) (Or) Tetrahydrofuran (I)
Waste Code:	U220
Waste Description:	Benzene, Methyl- (Or) Toluene
Waste Code:	U394
Waste Description:	A2213 (Or) Ethanimidothioic Acid, 2-(Dimethylamino)-N-Hydroxy-2-Oxo-, Methyl Ester
Waste Code:	U395
Waste Description:	Diethylene Glycol, Dicarbamate (Or) Ethanol, 2,2'-Oxybis-, Dicarbamate

Subcategory (containing 1% to <10% TOC)
Waste Code 2: F003
Waste Type 2: The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
Waste Code 3: F005
Waste Type 3: The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of those spent solvents and spent solvent mixtures.

Waste Description: 1,4-Dichlorobenzene

Waste Code: D028
Waste Description: 1,2-Dichloroethane

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P012
Waste Description: Arsenic Oxide As2o3 (Or) Arsenic Trioxide

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P046
Waste Description: Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-

TARGET STORE T1182 (Continued) **1009218509**

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U075
Waste Description: Dichlorodifluoromethane (Or) Methane, Dichlorodifluoro-

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U279

Environmental Interest/Information System:
The South Carolina Department of Health and Environmental Control

AIR POWER (Continued) **1004780270**

(DHEC) Environmental Facility Information System (SC-EFIS) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The South Carolina Department of Health and Environmental Control (DHEC) Environmental Facility Information System (SC-EFIS) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Data of Government Version: 12/10/2025

SEMS: Superfund Enterprise Management System
SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Data of Government Version: 11/30/2025
Data Data Arrived at EDR: 12/03/2025
Data Made Active in Reports: 12/10/2025
Number of Days to Update: 7

Next Scheduled EDR Contact: 03/30/2026
Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Data of Government Version: 11/30/2025
Data Data Arrived at EDR: 12/03/2025

Next Scheduled EDR Contact: 03/30/2026
Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 02/17/2026
Next Scheduled EDR Contact: 06/01/2026
Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Data of Government Version: 10/30/2025

Data Release Frequency: Quarterly

Lists of state- and tribal hazardous waste facilities

SHWS: Site Assessment Section Project List
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Data of Government Version: 03/04/2025
Data Data Arrived at EDR: 03/11/2025

State and tribal institutional control / engineering control registries

RGR: Registry of Conditional Remedies
The Bureau of Land and Waste Management established this Registry to help monitor and maintain sites that have conditional remedies. A Conditional Remedy is an environmental remedy that includes certain qualifications. These qualifications are divided into two major categories: Remedies requiring Land Use Controls and Conditional No Further Actions.

Data of Government Version: 10/01/2024

Data Release Frequency: Varies

AUL: Land Use Controls
The term Land Use Controls or "LUCs" encompass institutional controls, such as those involved in real estate interests, governmental permitting, zoning, public advisories, deed notices, and other legal restrictions. The term also includes restrictions on access, whether achieved by means of engineered barriers (e.g., fence or concrete pad) or by human means (e.g., the presence of security guards). Additionally, the term includes both affirmative measures to achieve the desired restrictions (e.g., night lighting of an area) and prohibitive directives (e.g., restrictions on certain types of wells for the duration of the corrective action). Considered altogether, the LUCs for a facility will provide a tool for how the property should be used in order to maintain the level of protectiveness that one or more corrective actions were designed to achieve.

VCP: Voluntary Cleanup Sites
Sites participating in the Voluntary Cleanup Program. Once staff and a non-responsible party have agreed upon an approved scope of work for a site investigation and/or remediation, the party enters into a voluntary cleanup contract. Staff oversees the cleanup efforts to ensure that activities are performed to our satisfaction. Upon completion of the negotiated work in the voluntary cleanup contract, the non-responsible party receives State Superfund liability protection.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

ALLSITES: Site Assessment & Remediation Public Record Database
The South Carolina Department of Health and Environmental Control is pleased to have the Public Record for your review. The purpose of this database is two-fold. First, it will provide to communities another form of notice of cleanup activity, allowing them to have more information about assessment and cleanup activities in their area and in the State. Second, it can assist those seeking to redevelop brownfield properties within South Carolina.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information
A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing
To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information
Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing
A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing
Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Data of Government Version: 11/02/2025
Data Data Arrived at EDR: 11/03/2025
Data Made Active in Reports: 01/23/2026

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Day Care List
Source: Department of Social Services

GREEN HERON ROAD SITE
SOUTH OF GREEN HERON ROAD
GREENVILLE, SC 29607

TARGET PROPERTY COORDINATES

Latitude (North):	34.830644 - 34° 49' 50.32"
Longitude (West):	82.311319 - 82° 18' 40.75"
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	380087.5
UTM Y (Meters):	3854849.2
Elevation:	997 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50048405 MAULDIN, SC
Version Date:	2024

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

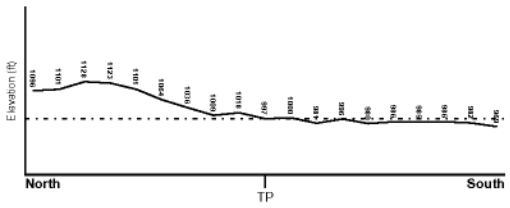

TOPOGRAPHIC INFORMATION

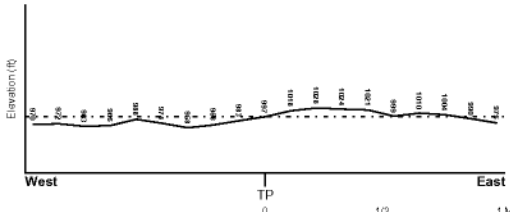

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 997 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
45045C0408E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
45045C0402E	FEMA FIRM Flood data
45045C0406E	FEMA FIRM Flood data
45045C0404E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MAULDIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
12	1/2 - 1 Mile West	SSE
1G	1/2 - 1 Mile West	SSE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

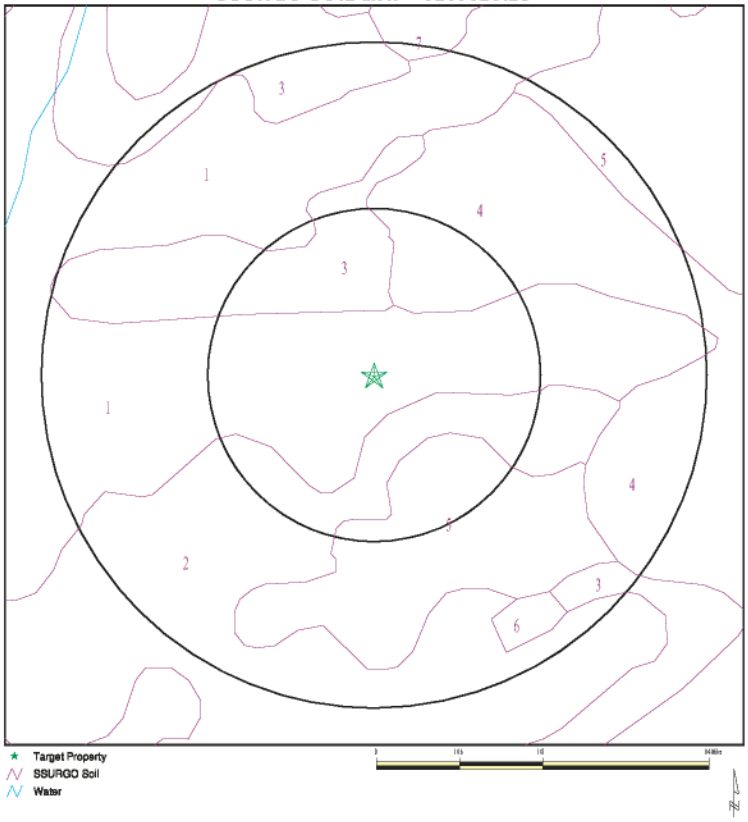

Era:	Paleozoic
System:	Pennsylvanian

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Natural Resources
Telephone: 803-734-9494

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

South Carolina Water Well Database
Source: Department of Natural Resources
Telephone: 803-734-6440
Water wells in the Coastal Plain counties of South Carolina.

Water Well Database
Source: Department of Natural Resources
Telephone: 864-654-1671
A listing of water wells in the Piedmont (upstate) counties.

RADON

State Database: SC Radon
Source: Department of Health & Environmental Control
Telephone: 864-241-1090
Radon Test Results by Zip Code

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Contact: Edward Brantley

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by S&ME, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 9033-4972-8338

PO # NA

Project 26610087 Phase 431

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 9033-4972-8338

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

S&ME, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

The LightBox City Directory Report is designed to assist environmental professionals in evaluating potential liabilities on select properties resulting from past activities. The report includes a search of available business directory data at approximately five-year intervals.

SOURCES

Through agreements with major city directory publishers, including Cole Information, InfoUSA, and Bresser, as well as our own collections (Haines & Stewart), the LightBox City Directory Report offers comprehensive national coverage.

LightBox is authorized to reproduce and redistribute all works featured in this report. The purchaser of this LightBox City Directory Report may include it in their final report(s).

Appendix IV – Vapor Encroachment Screening

Attachment - Tier 1 Vapor Encroachment Screening Report

♦ Introduction

S&ME has conducted a Phase I Environmental Site Assessment (ESA) for the subject property located south of Green Heron Road in Greenville, Greenville County, South Carolina. The Phase I ESA was performed in accordance with American Society for Testing and Materials (ASTM) E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2021), which requires the consideration of confirmed or potential releases of hazardous substances and/or petroleum products that may pose a threat of contamination to the subject property, including an evaluation of the potential migration of vapors. The evaluation of potential migration of contaminant vapors for this Phase I ESA, herein referred to as a Tier 1 Vapor Encroachment Screening (VES), was accomplished utilizing procedures described as Tier 1 Screening in ASTM E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (ASTM 2022) and, if applicable, using the refined search distances presented by Buonicore (2009), as described below.

♦ Purpose

The purpose of this VES is to assist in evaluating the existence of Vapor Encroachment Conditions (VECs) at the subject property. The VES was performed to identify releases or potential releases of chemicals of concern on or near the subject property and to evaluate the likelihood of vapors migrating from the releases via the subsurface to the subject property. The presence or likely presence of vapors containing chemicals of concern in the subsurface of the subject property constitutes a VEC and may also constitute a *recognized environmental condition* (REC), as defined by ASTM E1527-21.

♦ Evaluation Process

The following information was reviewed during the Tier 1 VES to identify releases or potential releases of chemicals of concern on or near the subject property and to evaluate the likelihood of vapors migrating from the releases via the subsurface to the subject property:

- The type of contaminant (petroleum product vs. non-petroleum product known or suspected to have been stored on-site or at identified off-site sources.
- The distance between identified off-site sources and the nearest subject property boundary.
- Information of known or assumed groundwater flow directions(s) with respect to the subject property.
- The potential for preferential pathways or barriers to exist between the identified off-site sources and the subject property boundary.
- Physical setting and other information sources.

The ASTM E 2600-22 Tier 1 Screening process recommends initial screening distances to estimate contaminant plume length and width with no empirical plume data. In cases where the direction of groundwater flow is known or can be reasonably assumed, those distances were refined under a conservative scenario using calculations presented by Buonicore (2009). The resulting vapor screening distances (*i.e.*, distances from a potential off-site contaminant source to the nearest boundary of the subject property) are presented in Table 1 with respect to the type of contaminant and the known or presumed direction of groundwater flow.

Table 1 - VES Area of Concern (AOC) Screening Distances

Contaminant Type	Source Location with respect to the nearest Subject Property boundary and considering known or assumed groundwater flow direction(3)		
	Up-gradient	Cross-gradient	Down-gradient
Non-petroleum COC(1) (see ASTM E 2600-15, Appendix X6)	1,760 feet (1/3rd mile)	365 feet	100 feet
Petroleum COC NAPL (2)	528 feet (1/10th mile)	165 feet	100 feet
Petroleum COC Dissolved	528 feet (1/10th mile)	95 feet	30 feet

Notes: (1) COC – Chemicals of Concern
(2) NAPL – Non-Aqueous Phase Liquid (*i.e.*, free product)
(3) Groundwater Flow Direction – if not known or assumed, use search distance of 1,760 feet for up-gradient, cross-gradient, and down-gradient

♦ Results

Based on our review of information collected as part of the Phase I ESA process, the subject property was not identified as a potential vapor contaminant source. Potential off-site contaminant sources were evaluated with respect to the process, screening distances, type of contaminant, and known or assumed groundwater flow direction. Table 2 lists the potential vapor contaminant source(s) identified at the subject property. One off-site facility (Nutra Manufacturing LLC/General Nutrition Inc) was identified with the AOC.

Table 2 – Identified Potential Contaminant Sources

Contaminant Source	Distance, direction, and groundwater flow direction (with respect to the nearest subject property boundary)	Contaminant Type and Screening Distance	Vapor Encroachment Conditions Determination
Nutra Manufacturing LLC/General Nutrition Inc.	Adjoining to north Cross-gradient	Non-petroleum COC (PCE) 365 feet	**A VEC Exists**

♦ Conclusions

Based on the processes described herein, the following conclusions were drawn from this VES:

- **Nutra Manufacturing LLC/ General Nutrition Inc.**: According to the BLE 2024 report for the above-referenced site, tetrachloroethylene concentrations were detected in vapor pins located approximately 190 feet north and cross-gradient from the subject property. The two closest vapor pins had detections of 289 and 2,710 micrograms per meter cubed. Accordingly, the Nutra Manufacturing LLC/General Nutrition Inc. facility **is considered a VEC**.

Notes:
Results listed in micrograms per meter cubed
Bold cells indicate detections above the laboratory method detection limit.
J = estimated value between practical quantitative limit and method detection limit.

Notes:
Results listed in micrograms per meter cubed
Bold cells indicate detections above the laboratory method detection limit.
J = estimated value between practical quantitative limit and method detection limit.

Notes:
Results listed in micrograms per meter cubed
Bold cells indicate detections above the laboratory method detection limit.
J = estimated value between practical quantitative limit and method detection limit.

SITE RECONNAISSANCE CHECKLIST
Phase I Environmental Site Assessment

Site and Project Information

Site Name: Green Heron Road Site

Job Number: 26610087

Site Address: South of Green Heron Road, Greenville, Greenville County, South Carolina

Date: 2026-03-03

Site Reconnaissance performed by: Edward Brantley

Accompanied by: N/A Representing whom: S&ME

General Property Description:

Structures (# and use of buildings, type of construction, # of stories, approx. age, current source of heating fuel, apparent age of current heating system, evidence of former heating system, presence of floor drains, sumps, elevators, chemical storage, current/past septic systems): no structures

Site Manager (name, title, affiliation, period on-site): N/A

Occupants (name, title, affiliation, period of occupancy): None

Pavements (type, general condition): None

Limitations (locked doors, unsafe conditions, ground cover, low light, excluded areas): None

Inaccessible areas (location, size, why inaccessible): None

Topography: Drainage to the southwest

Soil Type: Loamy sands

Rock Outcrops: None

Apparent direction of G/W flow: Southwest

On-Site Observations:

SITE FEATURES	OBSERVED (Y/N)	DESCRIPTION
USTs	No	
ASTs	No	
Drums	No	
Staining/Spills	No	
Solid Waste Storage / Disposal	No	
Unusual or Noxious Odors	No	
Transformers/Other PCB Equipment	No	
Drums, Barrels and/or Containers > 5 Gallons	No	
Stressed vegetation	No	
Discolored or Disturbed Soil	No	
Mounding or Piles of Soil	No	
Evidence of Land Filling	No	
Depressions	No	
Pits, Ponds, or Lagoons	Yes	One stormwater detention pond was observed on the southwestern portion of the subject property
Railroad Spurs	No	
Monitor Wells	No	
Municipal Water/Sewer	No	
Water Supply Wells/Septic Tanks	No	
Other	No	

Are MSDS's available for stored chemicals: N/A

Non-hazardous waste disposal by: N/A

Hazardous waste disposal by: N/A

Off-Site Observations:

Property to the **north** is at an **equal** elevation than subject property	Describe observations: International Vitamin Corporation.
Property to the **east** is at a **higher** elevation than subject property	Describe observations: Candlewood Suites and Target.
Property to the **south** is at an **equal** elevation than subject property	Describe observations: Piedmont Natural Gas Company.
Property to the **west** is at a **lower** elevation than subject property	Describe observations: Parallel Parkway and Hamilton Townes at Verdae.

Appendix VI – User Questionnaire and Interview Documentation

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

To qualify for Landowner Liability Protections (LLPs), ASTM E1527-21 specifies that the Phase I ESA User must provide the following information, if available, to the Environmental Professional. Failure to provide this information could make the Phase I ESA incomplete and the User unable to qualify for LLPs.

1. As the User of this Phase I ESA, do you have knowledge of any environmental clean-up liens against the subject property that are filed or recorded under federal, tribal, state, or local laws?

   No

2. As the User of this Phase I ESA, do you have knowledge of any Activity and Use Limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, state, or local laws?

   No

3. As the User of this Phase I ESA, do you have any specialized knowledge or experience related to the subject property or nearby properties?

   No

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the subject property? If not, is the lower purchase price attributable to known or suspected contamination?

   YES, FAIR MARKET VALUE

5. As the User of this Phase I ESA, do you have knowledge of information about the subject property that would be helpful in identifying conditions indicative of contaminant releases, such as: a) past use of the subject property; b) presence of specific chemicals (past or present); c) spills or chemical releases at the subject property; or d) environmental cleanups that have taken place at the subject property?

   Will provide 2013-era Phase 1 report

6. As the User of this Phase I ESA and based on your knowledge and experience of the subject property, are there any obvious indicators that point to the presence or likely presence of contamination on the subject property?

   No

7. What is the purpose of the Phase I ESA (i.e., why is it needed)?

   TO AID IN DUE DILIGENCE DEVELOPING AFFORDABLE MULTIFAMILY NEW CONSTRUCTION

User Questionnaire (continued)

In addition, certain other information should be provided, although not necessarily to qualify for *LLPs,* including contact information for past and current property owners, operators, and key occupants; the reason for performing this ESA; and documentation showing the property address, location, and boundaries.

8. Is the subject property on city utilities? If so, how long has the subject property been on the city system?
   ___ No ✓ Yes (please explain below)
   THERE IS A SANITARY SEWER LINE RUNNING NORTHEAST TO SOUTHWEST ON THE RIGHT SIDE OF THE PROPERTY
9. Is there or was there previously a septic system present at the subject property?
   X No ___ Yes (please explain below)
10. If there are buildings on the subject property, how are the buildings heated?
    X No ___ Yes (please explain below)
11. Have the buildings always been heated this way? If not, what was the prior heat source(s)?
    ___ Yes ___ No (please explain below)
    N/A
12. Are you aware of past or present land application of residual biosolids at the subject property? If so, what is (or was) the source of the residual biosolids?
    No
13. Are you aware of underground and above-ground storage tanks on the subject property?
    No
14. If available, **provide contact information for past and current property owners, operators, and key occupants.**
    Verdae Development
15. If not previously presented to S&ME, please provide documentation showing the subject property address, location, and boundaries.

Printed Name Joseph Kass Signature _____ Date 02/24/25

USER-FURNISHED INFORMATION

The following is a list of documents and information that could be useful to S&ME in preparing your Phase I ESA. Please check the appropriate boxes below, sign, and e-mail this form along with the signed Agreement for Services and completed User Questionnaire. We will contact you regarding review of any available materials.

Yes	No		
✓		1.	Environmental site assessment reports OLD 2013 PHASE 1
	X	2.	Environmental audit reports
	X	3.	Environmental permits (i.e., solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits)
	X	4.	Registrations for underground and above-ground storage tanks
	X	5.	Material safety data sheets (MSDS)
	X	6.	Community right-to-know plan
	X	7.	Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control plans, etc.
	X	8.	Reports regarding hydrologic conditions on the subject property or surrounding area
	X	9.	Reports of any past or current environmental remediation on-site or on adjoining properties
	X	10.	Notices or other correspondence from any government agency relating to past or existing environmental liens encumbering the subject property
	X	11.	Hazardous waste generator notices or reports
	X	12.	Geotechnical studies
	X	13.	Report of earthwork or land filling activities on-site
	X	14.	Information concerning any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum Products
	X	15.	Notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products
	X	16.	Disclosure of sumps, pits, drainage systems (i.e., the existence of and location)
	X	17.	Building plans (architectural, utility, structural)
	X	18.	Description of current site operations, including layout drawings or sketches
	X	19.	Title report/chain-of-title
	X	20.	Tax assessor records (previous owner and occupants)
	X	21.	Purchase price analysis (if lower than comparables)
	X	22.	Current and historical photographs of the subject property
	X	23.	Current and historical topographic maps of the subject property

Printed Name Joseph Kass Signature _____ Date 2/24/25

PHASE I ENVIRONMENTAL SITE ASSESSMENT
OWNER QUESTIONNAIRE

1. Do you have knowledge of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state, or local laws? **No**

2. Do you have knowledge of any Activity and Use Limitations (AUL's) such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, state, or local laws? **No**

3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? **The property across Parallel Parkway from the Green Heron site has monitoring wells (TMS 0547010100101).**

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If not, is the lower purchase price attributable to known or suspected contamination? **Yes, this is market price.**

5. Do you have knowledge of information about the property that would be helpful in identifying conditions indicative of contaminant releases, such as: a) past use of the property; b) presence of specific chemicals (past or present); c) spills or chemical releases at the property; or d) environmental cleanups that have taken place at the property? **None Known.**

6. Based on your knowledge and experience of the property, are there any obvious indicators that point to the presence or likely presence of contamination on the property? **No**

Owner Questionnaire (continued)

7. What are the current and past uses of the property? **Vacant Land**

8. Is the subject property on city utilities? If so, how long has the subject property been on the city system?
No

9. Is there or was there previously a septic system present at the subject property?
No

10. If there are buildings on the subject property, how are the buildings heated?
None

11. Have the buildings always been heated this way? If not, what was the prior heat source(s)?
NA

12. Are you aware of past or present Underground Storage Tanks or Aboveground Storage Tanks on the property? **No**

13. Are you aware of past or present land application of residual biosolids at the subject property? If so, what is (or was) the source of the residual biosolids? **No**

Executive Summary

Atlantic Environmental Services, Inc., (AES) has conducted a Phase I Environmental Site Assessment (ESA) for a proposed +/-4.1-acre property located adjacent to the south side of Green Heron Road, in Greenville, South Carolina for Green Heron Development, LP, on behalf of the South Carolina State Housing Finance and Development Authority. The subject Site is wooded, undeveloped land.

The objective of a Phase I ESA is to identify recognized environmental conditions (REC) for a subject site. A recognized environmental condition is defined in ASTM standard E-1527 as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property, or into the ground, groundwater, or surface water of the property."

A Site reconnaissance visit was conducted on January 21, 2013. The site inspection of the property and surrounding area, and the information provided to AES, indicated the following:

- The Site is a +/-4.1-acre portion of a +/-6.835-acre parent parcel as approximately shown on the sketch included in Appendix B, Figure 1, and identified as parent parcel 0547010100205 in Greenville County property Records. The property is located on the south side of Green Heron Road southwest of its intersection with Woodruff Road in Greenville, South Carolina.

- The parcels surrounding the Site consist of commercial, industrial, and undeveloped properties.

- Duke Energy provides electricity to the parent property and AT&T provides landline telecommunication service. Water service is provided by the Greenville Water System and sewer is provided by the City of Greenville Department of Public Works. Natural gas is provided by Piedmont Natural Gas.

- Topography at the Site generally slopes to the southwest. Elevation at the Site ranges from approximately 970-feet to 1,005-feet above msl.

- AES contacted Mr. Rick Sumerel, of Verdae Development, Inc., for an interview aimed at determining the past and present uses of the subject and

adjoining properties and to obtain information to be used in the identification of recognized environmental conditions at or near the property. Mr. Sumerel referred AES to Ms. Dale Hall of Hollingsworth Funds to answer interview questions. Ms. Hall provided documents indicating previous environmental studies on the Hollingsworth Funds/Verdae properties with respect to the adjacent Nutra Manufacturing facility. Ms. Hall provided a "Site Access Agreement for Environmental Investigations" dated September 5, 2008, between Hollingsworth Funds, Verdae Properties, and Nutra Manufacturing. This agreement is for Nutra to access the subject Site and other adjoining parcels to install and sample groundwater monitoring wells in response to the findings of a 2007 investigation that reported the "presence of tetrachloroethylene and other contaminants" at the Hollingsworth Funds/Verdae property. The Agreement states that "the source of the contaminants is unknown, but they might be migrating off of the Nutra property". The Agreement does not detail whether the contaminants were found on the subject Site or its parent property or the other adjoining Hollingsworth Funds/Verdae parcel to the west. Ms. Hall provided AES with contact information for Mr. Dain Ranew of Nutra Manufacturing and Mr. Bob Olson of Natural Resource Engineering, a consultant for Nutra. AES contacted these gentlemen as detailed in Section 6.5.

- A visual inspection of the Site revealed no significant staining or odors on or coming from the ground or structures. Trash dumping was observed in the areas of what appeared to be the foundation remains of a barn or former house site. Piles of construction debris were also noted in the northwestern corner of the Site along what appeared to be an old roadbed extending from the end of Green Heron Road. This pile contains pieces of concrete, metals, concrete stormwater pipe and vaults, PVC pipe, tires, and household trash. Most of this material is on the roadbed and may be physically on the adjoining property. This dumping is considered a de minimis condition as defined in ASTM E1527. A deflated trench line was noted down the center of the Site. Along this trench line were several sink holes exposing what appeared to be a 12 to 18-inch reinforced concrete pipe. It is unclear from visual inspection if this line is still in service, if it discharges to the detention pond on the adjoining parent property, and what areas it may serve.

- A stormwater detention pond exists on the parent parcel to the southwest of the Site and is an area that previously served as a waste pond. Based on a letter provided by Verdae Development, it appears that the waste pond was closed

out in 1978. Verdae Development also forwarded a letter from SCDHEC dated in 2005 that it provided as documentation of a "no further action" status for the close out of the former waste pond area.

- The subject Site is not listed in the federal, state, or local environmental databases searched by EDR per ASTM standards. The surrounding area was found to contain numerous mapped and unmapped records in the state and federal environmental databases searched per ASTM standards. A review of this database information indicates that Nutra Manufacturing on the adjoining property to the north has the potential to affect the subject property. Based on a review of the listed status and location of the remaining database records, it has been determined that they are not expected to affect the subject property.

- This Phase I Environmental Site Assessment was performed in conformance with the scope and limitations of ASTM Practice E 1527-05 for the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.4. This assessment has revealed evidence of recognized environmental conditions in connection with the adjacent Nutra Manufacturing facility. Due to the proximity and topographic position of the Nutra facility, a limited Phase II Investigation is recommended to determine if the conditions at the Nutra facility have affected the subject Site.

1. Introduction

1.1 Purpose

The purpose of a Phase I Environmental Site Assessment (ESA) is to identify recognized environmental conditions for a subject site. A recognized environmental condition is defined in ASTM standard E-1527 as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property, or into the ground, groundwater, or surface water of the property."

AES was contracted to perform this assessment by Green Heron Development, LP, on behalf of the South Carolina State Housing Finance and Development Authority.

1.2 Detailed Scope of Services

This assessment has been conducted in conformance with ASTM E 1527-05.

The scope, completed by assembly of this report, consisted of the following.

1) Obtain and review federal and state regulatory agency records for the site and immediate surrounding area for inclusion in databases listing known areas of environmental risk and / or contamination.

2) Perform a site inspection of accessible areas of the property to determine the presence or likely presence of recognized environmental conditions.

3) Review available aerial photographs and other historical information for the site from readily available sources in order to evaluate changes in site vegetation, topography and use.

4) Assess adjacent property use by observation from the subject site or from adjacent public roadways. Contact local regulatory agencies, fire department, neighbors, and previous owners as may be productive in verifying historical use of the property.

5) Identify site history of ownership by reviewing readily available property ownership records on the county register of deeds website.

6) Prepare a written report documenting the results of the foregoing evaluations and form an opinion of the presence or likely presence of recognized environmental conditions at the site.

1.3 Significant Assumptions

A Phase I ESA per ASTM standards is an assessment that is based on various assumptions. Assumptions are inherently made by the environmental professional in the site inspection, property research, and reporting tasks involved in completing the process.

In the inspection and research phase, the environmental professional has to assume that the conditions observed during the Site inspection are representative of the unaltered condition of the Site. In addition, the professional has to accept as true the information obtained from the past and present owners, regulatory officials, and other historical and publicly available sources.

In assembling all of the data obtained through the Site inspection and research procedures into a report, the professional also has to make assumptions about the extent, or lack of, impact that may have occurred from an apparent release of a petroleum product or hazardous waste. Further, assumptions have to be made concerning subsurface conditions and how the variables of soil characteristics and groundwater hydrology can affect the fate and transport of contaminants.

1.4 Limitations and Exceptions

The evaluations presented in this Phase I ESA are based exclusively on information provided by Green Heron Development, LP, current and former owners of the property, Environmental Data Resources, Inc., other publicly available sources, and observations made during the site inspection. No quantitative field activities were conducted; no samples were collected; and AES performed no laboratory analyses. In preparing this report AES has accepted as true the information provided by the property owner and other publicly available sources. AES cannot warrant the actual site conditions described in this report beyond matters amenable to visual confirmation within the limits of this site inspection program or beyond the date of the site inspection.

Services associated with evaluation of Site buildings, if any, for asbestos, vapor intrusion, mold, and radon were excluded from this scope of services.

1.5 Special Terms and Conditions

This Phase I ESA report is intended only for the use of the individual or entity for which it was prepared and may contain information that is privileged, confidential, and exempt from disclosure under applicable law. Any dissemination, distribution, reliance, or copying of this document is strictly prohibited.

1.6 User Reliance

AES warrants that the services performed for the user were conducted in a competent and professional manner in accordance with sound consulting practices and procedures. Reliance on this document by parties other than the user is solely for informational purposes and is taken at any other party's own risk.

2. Site Description

2.1 Location and Legal Description

The subject property is located on the south side of Green Heron Road southwest of its intersection with Woodruff Road. This location is southeast of Greenville, South Carolina. A legal description for the property was not provided by the user. A sketch of the subject Site is included as Figure 1 in Appendix B.

2.2 Site and Vicinity General Characteristics

The subject Site is a portion of Greenville County parcel 0547010100205 (the parent property) totaling approximately 4.1-acres. The property is currently wooded and vacant. Ground cover consists of mostly of mixed hardwood trees and shrubs over ivy, leaves, grasses, and weeds.

The Site is in the Mauldin, South Carolina, USGS topographic quadrangle. The surface elevation at the Site ranges from approximately 970-feet to 1,005-feet above mean sea level (msl). Topography at the Site generally slopes to the southwest. Stormwater runoff onto and across the Site is from Green Heron Road and parking lot or lawn and wooded areas of the adjoining properties and is directed to the southwest toward an unnamed tributary to Laurel Creek. A stormwater detention pond exists in the southwest corner the parent property, but is not part of the subject 4.1-acres.

The property is bound on the north by Green Heron Road and Nutra Manufacturing, on the west by undeveloped woodlands, on the east by commercial use under construction, and on the south by commercial use. A vicinity and topographic map for the Site is included as Figure 2 in Appendix B.

2.3 Current Use of the Property

The property is currently vacant.

2.4 Current Descriptions of Structures, Roads, Other Improvements on the Site (including heating/cooling system, sewage disposal, source of potable water)

The subject Site is currently an undeveloped, wooded property. Evidence of former residential use exists on the Site in the form of structures and trash dumping. The remains of a barn and/or house foundation were noted on the Site. Household trash and construction debris dumping was observed during the Site reconnaissance.

Water service to the subject property is provided by the Greenville Water System and sewer service is provided by the City of Greenville Department of Public Works. Landline telecommunications service is provided by AT&T and Piedmont Natural Gas provides natural gas to the property.

2.5 Current Uses of the Adjoining Properties

Properties adjoining the subject property consist of industrial and commercial development and undeveloped woodlands.

3. User Provided Information

3.1 Title Records

Chain-of- title research back to 1940 or the first developed use was not included in the scope of this assessment and was not provided by the user. Title records for the subject Site were reviewed on the Greenville County Register of Deeds website. Previous owner history was reviewed in an attempt to determine prior ownership that may indicate industrial use or use contributing to recognized environmental conditions.

Title records indicate that the subject property has been owned by Verdae Properties since 2001. Verdae Properties purchased the parcel as part of a 10.27-acre purchase from Michigan Ag-Chem, a Hollingsworth Funds Company. Back references in this deed indicate that the property was acquired by Michigan Ag-Chem from Alvin Green in 1972. Further, it appears that Alvin Green acquired the property from individual Green family owners in 1943. This 1943 deed does not provide a back reference but does indicate prior Green family ownership.

Documentation provided by the owner also indicates Mr. Pete Peterson as an owner of all or part of the parcel in the late 1970s, though this was not evident on the readily available deeds reviewed on the Greenville County Register of Deeds website.

3.2 Environmental Liens or Activity and Use Limitations

There are no known environmental liens against the subject Site and no activity or use limitations other than local zoning ordinances and building codes.

3.3 Specialized Knowledge

No specialized information or knowledge has been provided by the owner or user for the subject property.

3.4 Valuation Reduction for Environmental Issues

A valuation reduction has not been included as part of the scope of this assessment.

3.5 Owner, Property Manager, and Occupant Information

The subject property is currently owned by Verdae Properties, Inc. Mr. Rick Sumerel of Verdae Development, Inc., was contacted to provide details of his knowledge of the historical use of the property as described below in Section 6.1.

3.6 Reason for Performing Phase I

This Phase I ESA has been performed to identify recognized environmental conditions for the subject site. The user is interested in determining the likelihood of RECs at or near the subject property for the proposed purchase of the Site.

3.7 Other

No other user provided information is noted.

4. Records Review

4.1 Standard Environmental Record Sources

AES subcontracted with Environmental Data Resources (EDR) to complete research of readily available federal, state, and local regulatory databases to identify properties with environmental concerns within one-mile of the subject property. EDR researches applicable databases for properties with environmental concerns within specific radii from a subject property according to the standards in ASTM E 1527. The EDR Radius Map report is included as Appendix C.

Accordingly, the following records and databases were reviewed:

FEDERAL ASTM STANDARD

NPL National Priority List
Proposed NPL - Proposed National Priority List Sites
CERCLIS - Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP - CERCLIS No Further Remedial Action Planned
CORRACTS - Corrective Action Report
RCRIS-TSD - Resource Conservation and Recovery Information System
RCRIS-LQG - Resource Conservation and Recovery Information System
RCRIS-SQG - Resource Conservation and Recovery Information System
ERNS - Emergency Response Notification System

STATE ASTM STANDARD

SHWS - State Priority List Sites
SWF/LF - Permitted Landfills List
LUST - Leaking Underground Storage Tank List
UST - Comprehensive Underground Storage Tanks
VCP – Voluntary Cleanup Sites

FEDERAL ASTM SUPPLEMENTAL

CONSENT - Superfund (CERCLA) Consent Decrees
ROD - Records Of Decision
Delisted NPL - National Priority List Deletions
FINDS - Facility Index System/Facility Identification Initiative Program Summary Report
HMIRS - Hazardous Materials Information Reporting System
MLTS - Material Licensing Tracking System
MINES - Mines Master Index File
NPL Liens - Federal Superfund Liens
PADS - PCB Activity Database System
DOD – Department of Defense Sites
RAATS - RCRA Administrative Action Tracking System

TRIS - Toxic Chemical Release Inventory System
TSCA - Toxic Substances Control Act
FTTS - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

AST - Aboveground Storage Tank List
SC Spills - Spill List
GWCI - Groundwater Contamination Inventory
DRYCLEANERS – Drycleaner Database

EDR PROPRIETARY HISTORICAL DATABASES

Coal Gas - Former Manufactured Gas (Coal Gas) Sites

BROWNFIELDS DATABASES

US BROWNFIELDS – A Listing of Brownfields Sites
Brownfields – Brownfields Projects Inventory
INST CONTROL – No Further Action Sites With Land Use Restrictions Monitoring
VCP – Responsible Party Voluntary Action Sites

A brief description of each of the above databases is provided in Appendix C.

The subject property is not listed in any of the environmental databases researched by EDR. The surrounding area however, was found to contain several mapped and unmapped records in the state and federal environmental databases searched per ASTM standards.

The mapped records include listings in the RCRA-SQG, FINDS, AIRS, USAIRS, SHWS, LUST, UST, RCR, and BROWNFIELDS databases.

The closest of the mapped records is for Nutra Manufacturing with records in the RCRA-SQG, FINDS, AIRS, USAIRS, SHWS databases. This facility listing reports Nutra as a small quantity generator of hazardous waste with numerous violations reported. The violations appear to be related to record keeping, storage, and general requirements and do not indicate a hazardous substance release. The facility is however reported as a hazardous waste site as identified by EPA ID SCS123457231.

The remaining mapped records within 1/4-mile of the Site are for UPS Truck Leasing and Costco Gasoline. These properties are listed in the LUST/UST and UST databases. They are listed with a status of tanks in use and/or tanks that have been abandoned with a no further action status and are therefore not expected to affect the subject Site.

The remaining database listings are located from 1/4-mile to 1-mile from the subject Site. These records are separated from the subject Site by topographic features and distance such that they are not expected to affect the subject property.

Numerous unmapped records were reported by EDR with limited and incomplete address information. An examination of both the estimated location and listed status of these records was conducted to determine if they are likely within the ASTM radii of being a potential source of contamination. The address information provided for each unmapped record was cross-referenced with the streets that intersect within a one-mile radius of the Site.

Based on this analysis of the limited address information provided, the reported status of each unmapped record, and knowledge of the area gained during the site reconnaissance, it has been determined that the unmapped records are not expected to affect the Site. See Appendix C for details on each record listing.

4.2 Additional Environmental Record Sources

The EDR Radius Map report includes reporting of numerous federal and state supplemental databases. These additional environmental record sources were reviewed in the manner described above.

Further, per ASTM standards, an inquiry was made with Verdae Development for review of any previous Phase I ESA of the Site and/or adjoining properties. Verdae reported no previous Phase I ESA for the Site or parent property.

4.3 Physical Setting Source(s)

Data describing the environmental setting of a subject site is used for assessing the potential for migration of contaminants from adjoining properties or from within a parent property. Such data typically includes topographic and geologic sources that can be used to make judgments concerning the transport and fate of contaminants in air, soil, and groundwater.

Greenville County lies in the northwest part of South Carolina in the Upper Piedmont Plateau and Blue Ridge Mountains. Soils at the Site are classified as Pacolet sandy loam (PcE) 15% to 25% slopes. The PcE soils are described as well drained soils that are found adjacent to small streams. They have a moderate permeability. The soil reaction is medium to strongly acidic with a pH range from 5.2 to 5.7. The depth to

bedrock is typically greater than 60-inches and the depth to seasonal high water table is greater than 72-inches.

4.4 Historical Use Information on the Property

Historical use information for the Site was collected through review of previous environmental investigations if any, the USGS topographic map, ownership records, interviews, city directories, historical topographic maps, aerial images, and Sanborn Historical Maps. The latter three are discussed in this section and the others are discussed in various other sections.

Sanborn map coverages for the Site were researched by EDR. No map coverage was found for the area of the subject Site.

An aerial image dated from either a 1960 or 1970 photobase was reviewed in the county soil survey. This image is of large scale and low resolution making it difficult to discern the use of the Site. The Site appears to be a wooded, vacant property with a manmade pond, possibly a waste treatment pond, in the southwest corner of the parent property.

Images from 1997, 2003, 2006, 2008, 2009, 2010, 2011, and 2012 were reviewed on the Greenville County GIS website. The Site appears as a wooded, undeveloped property in these images. The stormwater detention pond on the parent property first appears in the 2003 image.

A historic aerial package provided by EDR includes images from 1955, 1965, 1976, 1978, 1989, 1994, 1999, 2000, 2005, and 2006. The 1955 image shows the area of the Site as either cultivated land or pasture and woodlands with some farmstead structures. The 1965 image shows the Site as described above. The 1976 image shows conditions similar to the 1965 image but includes a constructed pond in the southwest corner of the parent property. The building that is now Nutra Manufacturing is also evident in the 1976 image. The 1978 image shows the Site in a condition similar to the 1976 image. The 1989 image shows the Site with increased tree cover and it appears that the pond in the southwest corner of the parent property has been removed or is no longer in use. The Site remains as a wooded, vacant lot in the 1994-2006 images. The properties surrounding the Site show increasing commercial and industrial development over this period. No industrial use is indicated by these aerials over this period with the possible exception of the pond on the parent property.

Historical topographic maps were provided for the Site by EDR for the years 1938, 1957, and 1983. These maps show the elevation contours in the area of the Site and surrounding properties as relatively unchanged. The 1938 and 1957 maps show residential or farmstead structures in the vicinity of the Site. The 1983 map shows the pond in the southwest corner of the parent property labeled as an industrial waste pond.

4.5 Historical Use Information on Adjoining Properties

Information on the historical use of the properties adjoining the Site was obtained through review of the historical resources named above. The adjoining properties appear to have been vacant or developed for commercial or residential purposes. The adjoining parent property appears to have been the site of an industrial waste pond during the mid to late 1970s.

5. Site Reconnaissance

5.1 Methodology and Limiting Conditions

A Site reconnaissance was conducted on January 21, 2013. The Site inspection consisted of a walk of the subject Site for a visual inspection.

5.2 General Site Setting

The Site was found to consist of approximately 4.1-acres of wooded property. The Site is set in a commercial and industrial area southeast of the City of Greenville. The property is located to the southwest of the intersection of Woodruff Road (Highway 146) and Green Heron Road.

5.3 Exterior Observations

The exterior of the subject Site includes undeveloped woodlands with the remains of a barn or house on the northeastern side of the property. Household trash dumping was observed in this area and scattered across the Site. Dumping of construction debris was noted in the northwest corner of the Site along Green Heron Road. This pile contains pieces of concrete, metals, concrete stormwater pipe and vaults, PVC pipe, tires, and household trash. Most of this material is on the roadbed and may be physically on the adjoining property. This dumping is considered a de minimis condition as defined in ASTM E1527.

A deflated trench line was noted down the center of the Site. Along this trench line were several sink holes exposing what appeared to be a 12 to 18-inch reinforced concrete pipe. It is unclear from visual inspection if this line is still in service, if it discharges to the detention pond on the adjoining parent property, and what areas it may serve.

Ground cover consists of ivy, grasses, and weeds. The tree canopy consists of mixed hardwood and pine. Some terracing was also observed.

5.4 Interior Observations

No structures exist on the Site for interior inspection.

6. Interviews

6.1 Interviews with Owner

AES contacted Mr. Rick Sumerel of Verdae Development, Inc. (manager of the Hollingsworth Funds properties), for an interview aimed at determining the past and present uses of the subject and adjoining properties and to obtain information to be used in the identification of recognized environmental conditions at or near the property. Mr. Sumerel referred AES to Ms. Dale Hall of Hollingsworth Funds, Inc. Ms. Hall reported that the subject Site was purchased in 1985 and indicated that the property has had previous agricultural use and that there was a waste treatment lagoon on the parent property that was closed out and restored. She indicated that she did not know who operated the treatment lagoon or what area or industry it served. She did provide some documentation of the close out of the waste pond in the late 1970s and a 2005 SCDHEC letter acknowledging a study of the area of the former waste pond as evidence of a no further action status. These documents are included as Owner Provided Information in Appendix H. She also reported no knowledge of any dumping, burning, or burial of hazardous waste or petroleum products at or near the Site. She also reported no knowledge of any environmental liens or regulatory actions against the property, no activity or use restrictions, and no recognized environmental conditions at the subject Site.

Ms. Hall provided a "Site Access Agreement for Environmental Investigations" dated September 5, 2008, between Hollingsworth Funds, Verdae Properties, and Nutra Manufacturing. This agreement is for Nutra to access the subject Site and other adjoining parcels to install and sample groundwater monitoring wells in response to the findings of a 2007 investigation that reported the "presence of tetrachloroethylene and other contaminants" at the Hollingsworth Funds/Verdae properties adjoining the Nutra property. The Agreement states that "the source of the contaminants is unknown, but they might be migrating off of the Nutra property". The Agreement does not detail whether the contaminants were found on the subject Site or its parent property or the adjoining Hollingsworth Funds/Verdae parcel to the west. Ms. Hall has provided AES with contact information for Mr. Dain Ranew of Nutra Manufacturing and Mr. Bob Olson of Natural Resource Engineering, a consultant for Nutra. AES contacted these gentlemen as detailed below in Section 6.5.

6.2 Interview with Site Manager

See section 6.1 above.

6.3 Interviews with Occupants

There are no occupants at the subject Site.

6.4 Interviews with Local Government Officials

AES contacted Jim Gurley, Fire Marshal of The Wade Hampton Fire Department, to obtain information on fire calls, spills, HAZMAT responses or other environmental conditions at or near the subject Site. Mr. Gurley reported no fire calls, spill, or HAZMAT calls or environmental conditions at the Site in his 23-years of service.

AES contacted the office of Fire Marshal Dan Shirley of the City of Greenville to obtain information on fire calls, spills, HAZMAT responses or other environmental conditions at or near the subject Site. A freedom of information request was faxed to Ms. Tammy Sanderford. She reported no fire calls, spill, or HAZMAT calls or environmental conditions at or near the property during the approximately 3-years that the property has been in the City.

6.5 Interviews with Others

AES contacted Mr. Dane Ranew of Nutra Manufacturing and requested permission to discuss historical and current reports with respect to the Nutra property and the adjoining Hollingsworth Funds/Verdae properties. Mr. Ranew referred AES to Mr. Bob Olson of Natural Resource Engineering, a consultant for Nutra.

AES contacted Mr. Bob Olson. Mr. Olson confirmed that he is working on a project for Nutra and that the Nutra property is in the Voluntary Cleanup Program as directed by SCDHEC. He provided historical data for sampling of soils, groundwater, and surface waters on the Nutra property and some on Verdae property to the south of the Nutra Property. This data indicates that a release(s) of chlorinated hydrocarbons and other regulated substances has occurred on the Nutra property. The data does not indicate that the release(s) has affected the subject Site.

7. Findings

The following findings were made during this Phase I ESA process. They are listed as follows:

- The Site is a +/-4.1-acre portion of a +/-6.835-acre parent parcel as approximately shown on the sketch included in Appendix B, Figure 1, and identified as parent parcel 0547010100205 in Greenville County property Records. The property is located on the south side of Green Heron Road southwest of its intersection with Woodruff Road in Greenville, South Carolina.

- The parcels surrounding the Site consist of commercial, industrial, and undeveloped properties.

- Duke Energy provides electricity to the parent property and AT&T provides landline telecommunication service. Water service is provided by the Greenville Water System and sewer is provided by the City of Greenville Department of Public Works. Natural gas is provided by Piedmont Natural Gas.

- Topography at the Site generally slopes to the southwest. Elevation at the Site ranges from approximately 970-feet to 1,005-feet above msl.

- AES contacted Mr. Rick Sumerel, of Verdae Development, Inc., for an interview aimed at determining the past and present uses of the subject and adjoining properties and to obtain information to be used in the identification of recognized environmental conditions at or near the property. Mr. Sumerel referred AES to Ms. Dale Hall of Hollingsworth Funds to answer interview questions. Ms. Hall provided documents indicating previous environmental studies on the Hollingsworth Funds/Verdae properties with respect to the adjacent Nutra Manufacturing facility. Ms. Hall provided a "Site Access Agreement for Environmental Investigations" dated September 5, 2008, between Hollingsworth Funds, Verdae Properties, and Nutra Manufacturing. This agreement is for Nutra to access the subject Site and other adjoining parcels to install and sample groundwater monitoring wells in response to the findings of a 2007 investigation that reported the "presence of tetrachloroethylene and other contaminants" at the Hollingsworth Funds/Verdae property. The Agreement states that "the source of the contaminants is unknown, but they might be migrating off of the Nutra

property". The Agreement does not detail whether the contaminants were found on the subject Site or its parent property or the other adjoining Hollingsworth Funds/Verdae parcel to the west. Ms. Hall has provided AES with contact information for Mr. Dain Ranew of Nutra Manufacturing and Mr. Bob Olson of Natural Resource Engineering, a consultant for Nutra. AES contacted these gentlemen as detailed in Section 6.5.

- A visual inspection of the Site revealed no significant staining or odors on or coming from the ground or structures. Trash dumping was observed in the areas of what appeared to be the foundation remains of a barn or former house site. Piles of construction debris were also noted in the northwestern corner of the Site along what appeared to be an old roadbed extending from the end of Green Heron Road. This pile contains pieces of concrete, metals, concrete stormwater pipe and vaults, tires, and household trash. Most of this material is on the roadbed and may be physically on the adjoining property. This dumping is considered a de minimis condition as defined in ASTM E1527. A deflated trench line was noted down the center of the Site. Along this trench line were several sink holes exposing what appeared to be a 12 to 18-inch reinforced concrete pipe. It is unclear from visual inspection if this line is still in service, if it discharges to the detention pond on the adjoining parent property, and what areas it may serve.

- A stormwater detention pond exists on the parent parcel to the southwest of the Site and is an area that previously served as a waste pond. Based on a letter provided by Verdae Development, it appears that the waste pond was closed out in 1978. Verdae Development also forwarded a letter from SCDHEC dated in 2005 that it provided as documentation of a "no further action" status for the close out of the former waste pond area.

- The subject Site is not listed in the federal, state, or local environmental databases searched by EDR per ASTM standards. The surrounding area was found to contain numerous mapped and unmapped records in the state and federal environmental databases searched per ASTM standards. A review of this database information indicates that Nutra Manufacturing on the adjoining property to the north has the potential to affect the subject property. Based on a review of the listed status and location of the remaining database records, it has been determined that they are not expected to affect the subject property.

- This assessment has revealed evidence of recognized environmental conditions in connection with the adjacent Nutra Manufacturing facility.

8. Opinion

The Phase I ESA process has lead to the formation of the following opinion(s) with respect to the aforementioned findings.

- Further investigation is warranted based on the current findings of this Phase I ESA process to develop a conclusion on the existence of current or historical recognized environmental conditions at the Site with respect to the adjacent Nutra facility.

9. Conclusions

- This Phase I Environmental Site Assessment was performed in conformance with the scope and limitations of ASTM Practice E 1527-05 for the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.4. This assessment has revealed evidence of recognized environmental conditions in connection with the adjacent Nutra Manufacturing facility. Due to the proximity and topographic position of the Nutra facility, a limited Phase II Investigation is recommended to determine if the conditions at the Nutra facility have affected the subject Site.

10. Deviations

No significant deviations were applied in this assessment.

12. Signature(s) of Environmental Professional(s)

The signature of the environmental professional that prepared this assessment is provided on the title page.

13. Qualifications of Environmental Professional(s)

Jon Pruitt has nineteen years of experience in environmental assessment, compliance, and engineering. His master's degree studies in environmental systems engineering were concentrated in physiochemical treatment, waste management and risk assessment. In his professional career he has been involved in a number of industrial and municipal wastewater design projects and has completed numerous NEPA compliance reports and Environmental Assessments. Project experience includes ASTM Standard Phase I and II Environmental Site Assessments, having completed assessments for hundreds of properties. These projects have included numerous undeveloped properties proposed for residential subdivisions or industrial business parks, commercial, utility, and industrial properties. He also has experience with industrial and municipal solid waste projects, wetlands delineation, asbestos inspection, construction management, as well as project management in Wireless Telecommunications and Land Development.

Re: "Lagoon Site" near Green Heron Road
Greenville County, S. C.
Tax Map No. 547.1-1-3

Dear Tommy:

We represent Michigan Agri-Chemical, Inc. in connection with the acquisition of the property briefly identified above. It is my understanding that over the last two or three years since sanitary sewer lines were installed on a portion of the property that the sewer lagoon has been discontinued and the property restored. Although I am not familiar with all of the details, I believe that Michigan Agri-Chemical and Mr. Pete Peterson have worked together in this regard.

Mr. Peterson has requested that I send to you the documentation necessary to conclude the transaction inasmuch as title to an undivided one-half interest in the same is in the name of Southern Bank and Trust Company as Administrator CTA of the Estate of Charles J. Peterson, deceased. Accordingly I am enclosing herewith a copy of an agreement providing for the sale of this interest in the property and attached thereto a proposed deed for the conveyance of the property which was acquired by the bank from P. I., Inc. in May of 1975 by deed recorded in Deed Book 1019, Page 115.

The within agreement sets forth the terms of the sale as we understand them and has been executed by Michigan Agri-Chemical. If you find it to be in order, I would appreciate your attending to its execution on behalf of the bank as Administrator CTA and returning two of the within three copies to me fully executed and dated. Once that has been accomplished, we can set a definite closing date at a mutually convenient time within the closing period contemplated by the agreement.

Please let me know if you have any questions regarding the proposed procedure. I am sending a copy of this letter and of the agreement and

attached deed to Mr. Peterson as well as to Michigan Agri-Chemical, Inc.

With kind personal regards, I remain

Yours very truly,

A. Marvin Quattlebaum

Paid 5/25/79 1,680.00 (1/2 of total) Class 505

Byars Ditching, Inc.

Peterson Lagoon

December 19, 1978

Item	Total Price
Pumping fresh water into existing Lagoon for a period of 30 days. (1) Water Pump 24 hrs. per day (2) 1 Man 2 hrs. per day (3) 1 Pick-up truck (4) Gas & oil for pump	$ 1,150.00
Draining Lagoon for a period of 30 days at g.p.d. rate	350.00
Return existing Lagoon to natural form of land	1,250.00
Top soil & sand (1) 40 Loads top soil (2) Spreading 40 loads top soil (3) 1200 lb. seed, fescue	1,210.00
	$ 3,960.00
For pumping	- 600.00
	~~$ 3360.00~~ CR.

Step 1

1 - The pond's contents will be pumped into the receiving stream. To avoid degradationof the receiving stream, a set procedure must be followed if this method is used. A potable (non-polluted) water will be piped into the present inlet of the pond at a rate equal to the present flow of wastewater through the pond. (Note: The potable water supply line must be provided with an air gap between it and the wastewater system.) This flow will continue for a period of time equal to the calculated detention time of the oxidation pond. When the above has been completed, all flow into the pond should be discontinued and the pond may then be emptied by pumping into the stream at the rate equal to the present flow of wastewater through the plant.

Step 2

1 - Treatment of sludge that will remain on the bottom after the pond has been drained. Lime should be applied to the sludge to prevent odor problems. (Note: Lime addition is not required, but we do strongly advise it.) As soon as the pond is dry enough, the sludge should be disced into the soil. If the pond is to be filled in and bulldozed flat, no treatment of sludge will be required provided that the filling in and bulldozing proceeds as soon as the pond is drained. Advise this office of the course of action that will be taken on the abandonment of the pond.

Thank you for your time and patience.

Sincerely,

Robert H. Sentelle

WHEREAS, the South Carolina Department of Health and Environmental Control ("SCDHEC") has requested that Nutra conduct certain investigations of subsurface environmental conditions on the Nutra Property and possibly on properties that are in the vicinity of the Nutra Property; and

WHEREAS, the Owner Property is adjacent to the Nutra Property and Nutra desires access to the Owner Property in order to place wells on the Nutra Property near the property line with the Owner Property as access is easier from the Owner Property and possibly to complete sampling on the Owner Property; and

WHEREAS, Nutra has requested that the Owner provide access across the Owner Property to the Nutra Property to allow for well installation on the Nutra Property and for the sampling of such wells in the future; and

WHEREAS, Nutra has requested that the Owner provide access on the Owner Property for the purpose of possibly conducting certain investigations of the surface and subsurface conditions, including, but not limited to, soil samples, surface water and groundwater sampling on and underneath the Owner Property (hereinafter collectively referred to as the "Investigations"); and,

WHEREAS, the Owner has agreed to provide such access on the terms and conditions contained in this Agreement; and.

NOW THEREFORE, FOR AND IN CONSIDERATION of the mutual covenants, agreements, and undertakings herein set forth and other valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto hereby agree as follows:

Section 1 Definitions:

As used in this Agreement, the terms defined in the Preamble and in the Recitals hereto shall have the respective meanings specified therein, and the following additional terms shall have the meanings specified:

"At" or "at," when used with respect to the Owner Property means, "on, at, in, under, above or about."

"Environmental Law" means any and all applicable federal, state or local laws, statutes, ordinances, rules, regulations, orders, principles of common law, judgments, permits, licenses or determinations of any judicial or regulatory authority, now or hereafter in effect, imposing liability, establishing standards of conduct or otherwise relating to protection of the environment (including natural resources, surface water, groundwater, soils, and indoor and ambient air); health and safety; land use matters; or the presence, generation, treatment, storage, disposal, Release or threatened Release, transport or handling of any Hazardous Material including, but not limited to, the Federal Clean Air Act, the Federal Water Pollution Control Act, the Resources Conservation Recovery Act, and the Comprehensive Environmental Response, Compensation, and

Sent to Donald Leaver 5/19/81

STATE OF SOUTH CAROLINA)

COUNTY OF GREENVILLE)

A G R E E M E N T

This Agreement made and entered into this the _____ day of _____, 1981, by and between Southern Bank and Trust Company as Administrator CTA of the Estate of Charles J. Peterson, Deceased, hereinafter referred to as Southern Bank, and Michigan Agri-Chemical, Inc., hereinafter referred to as Michigan.

W I T N E S S E T H :

For and in consideration of the mutual covenants, recitals and agreements hereinafter set forth, and other good and valuable consideration, the receipt of which is hereby acknowledged, the undersigned do hereby agree as follows:

1. The real property located near Woodruff and Green Heron Roads in Greenville County, South Carolina which is the subject of this agreement (the Property) is fully described on the form of deed attached hereto as Exhibit A and incorporated herein by reference.

2. The Property was conveyed by Alvin D. Green to P.I., Inc. which had installed on the property a sanitary sewer line and sewer treatment lagoon as appears in deed dated March 12, 1969 recorded in the RMC Office for Greenville County in Deed Book 886, Page 16. This conveyance was expressly made subject to the condition that the property be used for the purpose of a sewer treatment lagoon and in the event the same ceased to be used for lagoon purposes a one-half undivided interest therein would revert to and revest in the grantor, his heirs and assigns.

3. Thereafter on or about August 15, 1972, the said Alvin D. Green conveyed his right, title and reversionary interest in the property to Michigan by deed dated August 15, 1972 recorded in the RMC Office for Greenville County in Deed Book 952, Page 23; and P.I., Inc. subsequently deeded the property to Southern Bank by deed dated January 31, 1975 recorded in the RMC Office in Deed Book 1019, Page 115, subject, however, to the reversionary interest

RE: Verdae Development
Site ID #01865
Assessment Report dated April 25, 2005
Greenville County

Dear Mr. Cothran:

The Department has reviewed the referenced assessment report. As documented, the soil sample results were below EPA's recommended PRG's with exception of arsenic. The arsenic concentrations ranged from 1.7 mg/kg to 14 mg/kg. However, these values are within the range of background levels reported throughout the state. Please reference SCDHEC *Elements in South Carolina Inferred Background Soil and Stream Sediment Samples.*

As the Department did not specifically request this data, and the work conducted at this site received no prior review by the Department, we cannot provide any comments on the completeness of the work performed or the overall environmental conditions of the site. Based on the information and analytical data submitted, there is no evidence to indicate that a violation of the Pollution Control Act has occurred. Consequently, no investigation will be required at this time. Please note this statement pertains only to the data submitted and does not apply to other areas of the site and/or any other potential regulatory violations. Further, the Department retains the right to request further investigation if deemed necessary.

On all correspondence please reference Site ID # 01865. If you have any questions, please feel free to call me at 803-898-4248.

Sincerely,

South Carolina File Number 400896
Nutra Manufacturing, Inc. Facility
Greenville, South Carolina

Dear Mr. Berresford:

Natural Resource Engineering, Inc. (NRE) on behalf of Nutra Manufacturing (Nutra) is providing this summary report to SC Department of Health and Environmental Control (DHEC). The report summarizes the activities of the approved work plan including: (1) a discussion of the activities and any deviations from the approved collection procedures; (2) complete copies of the laboratory test results; (3) a technical evaluation of the assessment results, and; (4) proposed future assessment activities. We are submitting one hard copy of the report and appendices and one electronic copy of the report and appendices in accordance with your request. We will be pleased to develop a work plan for the agreed upon next phase of assessment activities upon notification of your approval.

We appreciate your assistance on the project and if you need additional information, please do not hesitate to call.

Sincerely,

1.0 Introduction

This project was initiated to investigate the potential presence of a source of tetrachloroethylene (PCE) on the Nutra Manufacturing facility (Nutra), located in Greenville, South Carolina (Figure 1). The investigation was conducted in response to detection of dissolved chlorinated hydrocarbons (CHC) on an abutting property southwest of the Nutra facility. Specifically, the PCE was measured in surface and groundwater above regulatory criteria during an environmental site assessment in 2007. In response to these off-site findings, the South Carolina Department of Health and Environmental Control (SCDHEC) issued a letter (dated March 24, 2008) requesting that:

> "[A]n environmental assessment be conducted at the Nutra Facility. The assessment should determine if the plume(s) originates onsite, and the source of the chemicals of concern as well as the horizontal and vertical extent of the plume (if the plume(s) originates or a source is confirmed onsite".

To address the request of SCDHEC, Natural Resource Engineering, Inc. (NRE), on behalf of Nutra and in conjunction with Focus Environmental Services, Inc. (Focus) and NewFields, LLC have conducted a comprehensive environmental investigation of the site. A summary of the investigative activities conducted to-date are summarized in the following sections. A map depicting locations of samples collected to-date is provided in Appendix A.

1.1 Previous Investigative Activities

1.1.1 Preliminary Environmental Site Assessment –

The initial phase of the environmental investigation was a review of pertinent and available documents. In particular, NRE commissioned and reviewed results of an environmental records search, completed a review of the SCDHEC files, and conducted a records review during a site visit of the Nutra Manufacturing facility. In addition, the Phase I and II Environmental Site Assessments for the property located along Nutra's southwestern boundary were reviewed. The following is a summary of the findings of the review:

- The area surrounding the Nutra Plant is primarily commercial with the exception of undeveloped abutting property to the west-southwest. The Nutra property is located on a southwesterly sloping topographic high with streams occurring along the northern and southern property boundaries.
- Preconstruction aerial photographs and topographic maps suggest potential preferential groundwater flow paths to the north and south, with an overall south to southwest groundwater flow direction.
- The Phase I report for the adjacent property identified the former Nutra wastewater lagoon (hereafter referred to as the "on-site lagoon") as a "recognized environmental condition."
- The results of the off-site property investigation indicated the presence of PCE and its daughter products in groundwater and surface water above applicable regulatory criteria.
- No other facilities in the vicinity of the Nutra property were identified that would suggest PCE was used in their operations.
- A review of the on-site records indicates that PCE was used on-site from the late 1970s into the 1980s. Historical hazardous waste manifests document that spent and unused PCE waste was shipped off-site for disposal.

- The "Soil Assessment and Remediation Report", by Jacobs-Sirrine Engineers (April 1997) documents the remediation and closure of two former wastewater settling tanks. The report stated that records indicate that PCE was used "at the facility for less than 10 years in the 1980's." The report describes the investigation conducted during the removal of "two abandoned settling tanks." According to the report, the settling tanks were installed in the early 1980's to remove solids from the wastewater prior to discharge into the WCRSA sewer system. The settling tanks and contaminated soil were removed for disposal at a licensed hazardous waste landfill. No groundwater samples were collected for analyses during the assessment and remediation activities.
- In 1997, the Fletcher Group collected for volatile organic compound (VOC) analysis three (3) soil samples from the former wastewater lagoon. The laboratory results indicated there were no detectable VOC constituents in the samples.
- The most western portion of the Nutra facility, a 4.8 acre parcel, was previously owned by Greenville County. This parcel, which is now the southwest corner of the current parking lot and east of former lagoon, was the location of a former county road construction debris disposal area from 1968 to 1978. The debris area is currently surfaced with gravel and secured with chain link fencing.

1.1.2 Prior Nutra Investigation Efforts

After the records review an initial work plan was developed pursuant to SCDHEC's request for investigation in its March 2008 letter. The assessment was conducted in an iterative manner with earlier results dictating subsequent assessment scope. The investigation activities performed prior to 2012 were discussed in detail in our earlier data submittals and included:

1) Geophysical Survey of the construction debris area;

2) Direct Push Technology / Membrane Interface Probe (MIP) to identify the presence and location of CHC in the subsurface;

3) Soil Borings/Monitoring Wells – eleven wells were installed on site including eight wells screened in the saprolite and 3 wells screened in partially weathered rock;

4) Groundwater Monitoring –A semi-annual groundwater monitoring program was initiated in 2008, with groundwater samples collected for laboratory analysis, wells gauged and field parameters measured during each event;

5) Surface Water Monitoring – samples were collected from as many as fourteen (14) surface water stations in the southern and northern streams on the abutting property;

6) Geoprobe© Direct Push Technology groundwater sampling at 37 locations;

7) Hydraulic Conductivity Testing was conducted on the eight saprolite monitoring wells;

8) Sub-slab soil vapor sampling were collected from beneath the manufacturing plant floor;

9) Groundwater samples were collected along the southern stream's northern bank;

10) Receptor Survey - A receptor survey was conducted to identify potential users of groundwater in the vicinity of the Nutra site, and;

11) Location Survey - The northing and easting coordinates and the elevation of all sample and investigation points were field determined.

1.2 Conclusions from Prior Efforts

The results of the previous efforts indicate:

- PCE was used on-site during the late 1970s and 1980s.
- The southwestern portion of the site was reportedly used as a road construction debris disposal area by the county highway department.
- General Nutrition used the on-site wastewater lagoon to treat the wastewater generated on-site for approximately one (1) year.
- Dissolved phase and soil vapor impacts have been identified in the subsurface soil and groundwater on the Nutra property. No evidence of mobile non-aqueous phase liquids (NAPL) has been identified during the numerous investigations. One potential primary source area is located beneath the area of the former settling tanks and possibly beneath the area where the PCE was formerly used.
- Chlorinated hydrocarbon soil vapors are present beneath the Nutra facility building. Elevated vapor concentrations are localized in the vicinity of the potential primary source area.
- PCE is the primary dissolved CHC present in impacted soils and groundwater. Groundwater discharging to the adjacent streams has resulted in dissolved phase CHC concentrations in surface water. Surface water sampling indicates the concentrations are attenuated with distance in the streams.
- Groundwater beneath the site ranges in depth from 20 to 50 feet below the ground surface. The groundwater table as measured from the monitoring wells screened in the saprolite slopes to the west southwest with an approximate gradient of 0.02.

1.3 Prior Submissions

The documentation for the project has been provided to DHEC for review and approval. The documents submitted to DHEC to date include:

- The activities conducted prior to approximately May 2010 were presented to DHEC on June 17, 2010 at meeting in Columbia, SC. A copy of the Power Point presentation was provided to DHEC.
- A data report, including all collected data, was submitted to DHEC on July 16, 2010. Following DHEC review, the data submittal was approved in its letter dated July 16, 2012.
- A work plan was submitted on October 12, 2012 to collect samples from all surface water stations and groundwater monitoring wells prior to initiating additional investigation tasks.
- The 4th Quarter 2012 status report was submitted on January 31, 2013 and included the sampling was conducted in December 2012, as outlined in the October work plan.

- A work plan was submitted to DHEC for further characterization on April 4, 2013. Following clarification of several details (DHEC letter dated May 24, 2013), the 2013 work plan (Work Plan) was approved on June 17, 2013.
- A status report was submitted on August 31, 2013 describing the activities conducted since January 31, 2013

2.0 2013 Site Investigation

The Work Plan approved on June 17, 2013 for additional assessment included geologic mapping of the stream channels, further sub-slab vapor sampling in the building, vadose zone vapor screening, and stream bank sampling along the northern stream. The site assessment activities conducted in 2013 have refined our understanding of the potential location of the chlorinated hydrocarbon (CHC) sources and the resultant dissolved CHC transport processes. In addition, data that was collected has provided information that can be used in identifying potential remediation alternatives and locations of future monitoring wells. The following sections summarize the tasks completed in 2013 per the approved Work Plan.

2.1 Sub-Slab Soil Vapor Sampling

A total of twelve sample ports were installed to collect soil vapor samples from beneath the facility's concrete floor slab and asphalt paving. The sampling approach was designed to further characterize the magnitude and distribution of sub-slab vapors that were identified in a previous investigation. Eight of the ports were located beneath the facility and four ports were located just outside the northern wall of the facility (2 beneath concrete slabs and 2 in asphalt paved areas). The sample ports were installed by TAZ personnel (a subcontractor to Nutra), as described in the Work Plan, on July 5, 2013. The samples were collected from the ports on July 24, 2013 by NRE using summa canisters configured with a laboratory preset 5 minute sampling interval. The samples were analyzed by Accutest for VOCs using EPA Method TO-15. A summary of laboratory results for detected CHC constituents is provided in Table 1 and posted on Figure 2. The complete laboratory report is provided in Appendix B.

2.2 Stream Bank Sampling

A stream bank sampling program was conducted by NRE, supported by AE Drilling, along the northern stream on July 31 and August 1, 2013. As noted in the work plan this stream bank sampling program augments the previous stream bank sampling program conducted along the southern stream in 2010. The 2013 program involved collecting twelve (12) shallow groundwater samples from the southern and eastern side of the northern stream bank. Groundwater samples were collected as described in the approved work plan. All samples, except two (NSB-11 and NSB-12), were collected using direct push technology (DPT) Geoprobe©. The samples for NSB-11 and NSB-12 were collected using a variation of the USGS Hydraulic Potentiomanometer Technique. In addition to the stream bank sampling efforts one (1) additional groundwater sample (NWCGP) was collected near the northwest corner of the Nutra property using DPT. The stream bank sampling and NWCGP locations with detected CHC constituent concentrations are illustrated in Figure 3. The detected CHC concentrations are summarized in Table 2, and the complete laboratory results are provided in Appendix C. DHEC well completion forms are included in Appendix D.

2.3 Geologic Mapping of Stream Channels

The geologic mapping task for the northern and southern stream channels was conducted on June 20 and 21, 2013. This task involved traversing the stream channels while obtaining insitu surface water quality parameters near bedrock outcrops. The objective of the stream channel investigation was to identify a possible correlation of the distribution of detected CHCs in the channels and stream banks with the site geology. Outcrops were mapped and measured at observed locations at the base of the channel and in the

stream banks. Previous mapping in the area conducted by Buffaloe for the South Carolina Department of Natural Resources, Geology Survey (Buffaloe, 2002) documented the occurrence of silimanite mica schist and quartzo-feldspathic gneiss within the general location of the Nutra facility. Based on the work of Buffaloe, the site is located between an overturned antiform to the east and an overturned synform to the west. No measurements or geologic outcrops were reported by Buffaloe along the streams channels at the site. Figure 4 illustrates the geologic map developed by Buffaloe in the site area.

Three borings extending into the PWR were installed at the Site in 2009, MW-101, MW-104, and MW-107. The partially weathered bedrock at these locations varied from a siliceous-rich gneiss to a micaceous-rich gneiss to granite. Fractures and weathered zones were observed in all three locations. The weathered zones are characterized by iron oxidation, representative of groundwater flow. Details of the character of the PWR at each location are presented below.

MW-101-PWR: The partially weathered bedrock at this location consists of mica and feldspar-rich gneiss. Oxidized iron zones were observed in 3 to 5 feet zones separated by relatively fresh, unweathered bedrock. In the weathered zones, fractures are common.

MW-104-PWR: At this location, the partially weathered bedrock consists of well foliated gneiss intermixed with large clusters of silica (e.g., quartz). The silica clusters are 2 to 4 inches in size and occur sporadically in the bedrock. Two strongly oxidized zones were observed in the partially weathered bedrock core. These zones are highly weathered and range from 4 to 6 inches in thickness.

MW-107-PWR: The partially weathered bedrock at this location consists of banded gneiss and non-foliated granite. The granite is unweathered with minor fractures. The banded gneiss is slightly weathered with a strongly oxidized zone near the base of the core. The oxidized zone is approximately 4 to 6 inches thick.

Outcrops of siliceous-rich gneiss and micaceous-rich gneiss were observed in the northern and southern stream channels. The micaceous-rich gneiss consists of biotite and muscovite with crystals ranging up to 1 millimeter in size (Figure X1). The micaceous gneiss is present in northeastern portions of the area. The siliceous-rich gneiss was observed in the southern portions of the site area. Quartz and feldspar crystals in the silica rich gneiss were as large as several millimeters (Figure X2). The base of the stream channels in southern portions of the site is composed of silca rich gneiss containing large amounts of quartz. Figure X3 illustrates the observed distribution of the micaceous-rich gneiss and siliceous-rich gneiss as observed from outcrops in the stream channels.

These lithologic units appear to be intensely folded within this area. Measured strikes and dips range from flat lying to steeply dipping (Figure X4), which may reflect smaller folds within the larger overturned antiforms and synforms mapped by Buffaloe. In particular, the bedding planes observed within the southern stream generally strike east-west with a southerly dip of approximately 5 to 10 degrees. Planar surfaces in outcrops in the northern stream were observed to range from near horizontal in the southern portion of the stream (near the confluence of the streams) to steeply dipping in the northern portion of the stream. Near the confluence of the north and south streams, the siliceous-rich gneiss bedding planes are generally horizontal. Approximately 500 feet north of the confluence the bedding planes steepen to nearly vertical within the mica schist. This significant change in attitude may reflect a fault or intense folding. The northern stream channel morphology reflects the structural attitude

of the gneiss and schist as the channel changes direction in response to the strike of the undertlying lithologic units.

Groundwater flow appears to be controlled by the structure of the underlying geology. In particular, the banded layering within the gneiss likely produces preferential flow paths. Fluid movement preferentially flows along bedding planes defined by the observed foliation. This is consistent with the observed zones of oxidation observed in the PWR Well cores. As such groundwater is flowing in the direction of the strike (east to west) in the northern portion of the area where the attitude of the foliation is near vertical and along the dip (north to south) in the southern portion of the area where the attitude of the foliation is near horizontal.

2.4 Water Sampling/Measurements

2.4.1 Groundwater Level Measurements

Gauging of groundwater levels have been conducted routinely since September 2008. The depth to water is used in conjunction with existing top-of-casing elevation data to estimate purge volumes prior to sample collection and to define the potentiometric surface in the site area. The groundwater elevations for the August 2013 event are summarized in Table 3, while the historical elevations for each monitoring event are provided on Figure 9. Potentiometric surface maps for the August 2013 elevations for the saprolite and partially weathered rock (PWR) water bearing zones are depicted on Figures 10A and 10B, respectively. The figures depict equipotential groundwater contours based on the site groundwater elevations.

In addition to the site potentiometric surface maps, the potentiometric surface for the current study area (the site and the area bounded by the North and South Streams) was projected in Figure 10C. This potentiometric surface projection used the site groundwater elevations and assumed that the elevations of the stream channel (SW elevations) coincided with off-site groundwater table elevations.

2.4.2 Groundwater Sampling

Groundwater sampling of the existing wells occurred from August 20 to 22, 2013 in accordance with the procedures defined in the Work Plan. All monitor wells were purged of at least three well volumes while recording insitu indicator parameters (pH, temperature, oxidation reduction potential (ORP), turbidity, conductivity and dissolved oxygen). Groundwater samples were collected using disposable bailers. Three water sample vials were collected from each well, placed on ice in a cooler, and shipped to Accutest Laboratories under chain-of-custody protocol for analysis of VOCs by SW-846 Method 8260B. In addition, quality assurance/quality control samples (trip blanks and blind field duplicates) were submitted for analysis of VOCs. The purge records are provided in Appendix E and the analytical results for detected compounds are summarized in Table 4 and posted on Figure 11. The historical PCE concentrations observed in each well are illustrated on Figure 12. The complete Accutest Laboratories reports for the August 2013 sampling event are provided in Appendix F.

2.4.3 Surface Water Sampling and Insitu Parameters

The surface water sampling program was initiated in September 2008 with 5 stations. The program was expanded to include 14 stations in the southern and northern creeks by March 2010. The most recent surface water sampling program was conducted in conjunction with the Northern Stream Bank sampling

program in August 2013. During this sampling event, two additional surface water sampling stations, SW – 15 and SW – 16, were established in the northern stream to assist in the interpretation of the bank sampling analytic results. A thunder storm occurred after 13 of the 16 surface water stations had been sampled. As a result, significant increase in the stream flow was observed and samples could not be collected at three (3) of the 16 surface water stations (SW-6, SW-13, and SW-14). In addition, modifications to the plunge pool downstream of SW-12 have resulted in higher tail water which precludes the collection of a representative sample from the storm water pipe. As discussed in the work plan, all stream samples were collected using the dip technique, placed on ice in a cooler, and shipped to Accutest Laboratories under chain-of-custody protocol for analysis of VOCs by SW-846 Method 8260B. The results of the most recent sampling event for detected constituents are summarized in Table 5 and posted on Figure 13. A time trend plot for PCE in all surface water stations is presented on Figure 14. The complete laboratory reports are included in Appendix G.

2.4.4 Surface Water Flow Measurements

Surface water flow estimates were incorporated in the surface water sampling program after the initial sampling event. Due to the shallow depths, pooled areas, meandering nature of the creeks, and the changing creek bed conditions following runoff events, it has been difficult to obtain reliable flow measurements for every event at every station. Suitable conditions for these flow measurements were further compromised by the excessive rain experienced in June and July of 2013. Flow estimates were made using one of several techniques, where appropriate based on encountered conditions. Estimates were typically made using measured cross sectional area and time of travel velocity techniques. The area was measured using a tape and the velocities were estimated by timing floating material over a measured 3 to 6 foot distance. Visual estimates of flow were also made when the discharge was low and conditions were not conducive for acceptable measurements. The flow estimates could only be made at 2 stations for the August 2013 sampling event. The flow estimate of 24 gallons per minute (gpm) for SW-11 was obtained using area times velocity while a flow >0.5 gpm was a visual estimate.

Insitu parameters were obtained at the surface water stations that were sampled. The measurements were obtained using a Hanna 991301 meter. The measurements obtained during the sampling event are summarized in Table 6.

2.5 Former Lagoon Discharge Pipe Location

The location of the discharge pipe from the former wastewater lagoon, which was not previously known, was investigated in June and July of 2013. The discharge structure in the former lagoon indicated that the discharge pipe conveyed the wastewater towards the southern stream, but the actual pipe length and discharge point were unknown. The initial investigation, conducted by RotoRooter on June 21, involved using a sewer camera to traverse the pipe, locate the discharge point and evaluate its condition. The camera (in the recording mode) was inserted into the inlet and was manually pushed into the pipe for approximately 145 feet. Though the camera did not emerge at the end of the pipe, the pipe was intact and the joints appeared relatively tight. An additional investigation was conducted on July 5 in an attempt to locate the end of the pipe. During this investigation, RotoRooter performed a smoke test that determined the end of the pipe was located approximately 30 feet north of the southern stream near SW-3 (Figure in Appendix A). The recording of the camera results are included as Appendix H.

2.6 Soil Vapor Sampling Along Former Discharge Pipe

The purpose of the soil vapor sampling was to screen potential areas along the former lagoon discharge pipe where CHC constituents may have been released. On July 25, 2013 NRE created five (5) sample locations by hand augering a 2-inch hole to a depth of 2 to 3 feet below ground surface. TO-17 Radiello - Thermal Desorption passive sorbent (TDPS) sampling devices were suspended 1 to 2 feet below ground surface in the sealed auger borings in a manner that avoided contact between the TDPS device and surrounding soil. The space within the boring above the TDPS sample device was backfilled with soil so as to create a below ground sampling void. The samplers were deployed in the bore hole for 14 days. Following removal of the TDPS sampling devices, the bore holes were backfilled with the previously excavated soil. The samples were placed on ice and shipped to Air Toxics Laboratories under chain-of-custody protocol for analysis of VOCs using modified EPA Method TO-17. During the deployment period, the site experienced approximately 3.5 inches of rain with approximately 2 inches falling two days before the devices were retrieved. A summary of laboratory results for detected constituents are provided in Table 7 and posted on Figure 15, while the complete laboratory report is provided in Appendix I.

2.7 Location Survey

The northing and easting coordinates and the elevation of sampling locations and significant geologic investigation observations were field determined by Fant Reichert & Fogleman, Inc., a licensed South Carolina surveyor. The indoor sub-slab sampling locations were located by measuring from fixed building structures (walls, beams, etc.) identifiable on a scaled building drawing.

3.0 Results

The recent characterization efforts coupled with the prior investigation results have provided a refined understanding of potential CHC sources and the transport mechanisms of the CHCs. The following sections provide our understanding of the surrounding geology, the groundwater and surface water impacts and the soil gas interaction with the groundwater. In addition, a conceptual model is presented that discusses the potential sources and the transportation mechanisms.

3.1 Geologic Setting and Characteristics

The Nutra Manufacturing facility is located in the Piedmont Geologic Province of South Carolina. The Piedmont Region is characterized by igneous and metamorphic crystalline rocks that are weathered near the surface due to humid conditions and abundant rainfall. The weathering process of the crystalline bedrock creates a layered system that includes an upper weathered zone, termed saprolite, underlain by partially weather rock (PWR) zone, and then at depth, the unweathered competent bedrock. Saprolite is a unique geologic media in that it is characterized as a soil in terms of grain size and density but it retains the internal structure (e.g., fractures and foliations) of the parent rock. With depth, the weathering decreases and the characteristics of the bedrock become more evident.

The geology underlying the Nutra site is characterized by a complex composite of stratigraphic units including metamorphic schists and gneiss. (SCGS, 2002). Structurally, these units are highly deformed. The orientation of the planar surfaces (the strike) varies from east-west to north-south within the site area with dips ranging from near horizontal to vertical. The structural attitude of the rock units appears to influence the movement of groundwater due to the preferential flow along the banded planes within the gneiss. This is particularly true for the micaceous-rich gneiss.

At the site, results of our geologic investigations (borings and mapping) generally conform with previous geologic studies in the area and are generally consistent with the character of the Piedmont Region. The initial borings and wells were installed in the saprolite at a depth of approximately 35 to 55 feet below ground surface. The saprolite at the site is composed of clay, silt, and sand size particles derived from weathering of the parent metamorphic and igneous bedrock. Structural banding in the saprolite was observed indicative of internal structure of the bedrock..

Three borings were installed within the PWR in the northern portion of the site. The PWR at these locations generally ranged from 70 to 90 feet below ground surface. The partially weathered bedrock observed at these locations varied from siliceous-rich gneiss to a micaceous-rich gneiss. Fractures and weathered zones were observed in all three locations. The weathered zones are characterized by iron oxidation, indicative of oxidized groundwater interaction with iron-bearing minerals.

Outcrops of the siliceous-rich gneiss to a micaceous-rich gneiss occur in the northern and southern stream channels. The siliceous-rich gneiss is present in the southern portion of the area, near the confluence of the streams whereas the micaceous-rich gneiss is present in the northern and eastern portion of the channels (Figure 7). The attitude of the bedding as observed in outcrops in the stream channels is complex ranging from near horizontal to vertical. In particular, along the northern stream channel the orientation of the gneiss is approximately horizontal near the confluence of the stream but becomes nearly vertical 500 feet upstream. This severe change in attitude may reflect a fault or the structural limb of a steeply dipping fold. Groundwater flow is likely influenced by the structure as movement of fluids will preferentially occur along bedding planes.

Based on data from the stream investigation and the PWR borings, the suspected CHC release in the vicinity of the building would have entered the micaceous-rich gneiss where the foliations in the gneiss in this area appear to be near vertical. As a result, groundwater transport appears to be directed south to southwest, along the foliation planes. This explains why only low levels of dissolved CHC were detected in the numerous borings along the northwest portion of the building. In particular, the preferential flow along the bedding planes contained the transport as a narrow plume. This preferential flow path appears to be maintained to the south resulting in the impacts at NSB-2 and NSB-3. Along the northern stream, these are in the direction of the hydraulic gradient and structure of the micaceous gneiss. The lower concentrations observed in the northern stream at NSB-5a and NSB-6 may be the result of influence by the contact between the micaceous-rich gneiss and the siliceous-rich gneiss in this same general area.

Similarly, in the southern portion of the area, the potential release(s) of dissolved CHCs in the southern portion of the property to have been transported along foliation planes in the micaceous gneiss. In this case, the dip of the foliation varies spatially relative to the gradient, and as such, the dissolved plumes are more capable of dispersion. Hence, this explains the observed distribution of low dissolved CHC levels detected in the stream bank samples along the southern channel.

3.2 Soil Gas

Soil gas sampling was conducted at two locations, sub-slab samples near the former settling tanks and along the former lagoon discharge pipe. The sub-slab soil vapor samples were collected beneath the facility's concrete floor slab at eight locations in March 2009 and at 12 locations in July 2013 to further characterize the the location of the encountered PCE impacts. The sample locations (Figure 3) were situated so as to provide broad facility coverage. The March 2009 samples were collected using passive devices, while the July 2013 samples were collected using an active sampling device (Summa canisters).

The results from each of the sub-slab vapor sampling events indicate that residual CHC mass may be present beneath the facility concrete slab, primarily in the vicinity of the former sewer holding tank (VMW-8) and the area where the PCE was reportedly used (VSC-6). As shown in Figure 3, the vapor concentrations attenuate with distance from the afore referenced usage/conveyance areas. These data also indicate that vapor is migrating from the potential source area, potentially along preferential flow paths; sewer lines and/or porous foundation base material (i.e. gravel, loose soil, etc.). Due to interior facility access constraints (an activity manufacturing facility), the vertical and horizontal extent of the potential residual CHC mass has not been determined.

The five (5) soil gas samples collected along the former discharge pipe did not provide conclusive results. Discussions with Air Toxics Laboratory personnel indicate that as a result of the excessive rainfall, sseveral of the Radiello sampling devices were compromised (wet and/or high moisture) and where useable, the concentrations could only be estimated. Two (SG-1 and SG-2) could not be analyzed. The PCE concentrations for samples SG-3 and SG-4 were estimated to be >5.5 and >5.7 ug/l, respectively. The PCE concentration for SG- 5 was 0.1 ug/l. The investigation objectives for the former pipeline were compromised due to the wet weather conditions. Though the SG-5 results do not indicate significant leakage of CHCs, additional sampling will be required to fully evaluate leakage from the discharge pipe.

3.3 Groundwater

Groundwater is present beneath the site ranging in depth from approximately 15 to 30 feet below the ground surface. Over the course of the project, the groundwater elevations have varied by almost 5 feet,

with the lowest elevation occurring in October 2008 and the highest in August 2013. The high groundwater elevations encountered in August are the result of recharge from almost 18 inches of rain experienced in June and July 2013.

The recent monitoring event included gauging and the collecting groundwater samples from the eleven existing monitoring wells. Though the groundwater elevations were the highest observed at approximately 2.5 to 4.5 feet higher than those measured in December 2012, the elevations were similar to those measured in March 2010 and general lateral gradient directions are consistent with those observed during the previous sampling events. The groundwater table as measured from the saprolite wells slopes to the west southwest with a gradient of 0.018 ft/ft. Based on the fluid level measurements from the three PWR monitoring wells, the groundwater gradient is 0.016 ft/ft and also slopes to the southwest. The average hydraulic conductivity measured in the saprolite wells in March 2009 was 5.4×10^{-4} centimeters per second (cm/s). Based on the average hydraulic conductivity and the measured gradient, the groundwater velocity is approximately 50 to 60 feet per year.

A downward vertical gradient in the saprolite water bearing zone was observed based on water elevations in the saprolite and PWR well pairs (MW1-1 vs. MW 101-PWR and MW 4-1 vs. MW104-PWR). In particular, the vertical gradient measured at the northern nested well location (MW1-1 vs. MW 101-PWR) is 0.01 ft/ft, while at the central nested well location (MW 4-1 vs. MW104-PWR) it is 0.006 ft/ft. The significant difference in vertical gradients between these locations is likely in response to the proximity of the northern creek, which, if connected with the PWR, would support localized downward vertical groundwater flow.

The quality of the groundwater has been impacted by CHCs, primarily PCE. Over the years, other unexplained constituents from unknown sources (primarily gasoline components- MTBE, toluene, etc.) have also been detected (though not consistently) at low concentrations. The historical PCE concentrations for all monitoring wells are shown in Figure 12. The historical groundwater concentrations observed for all groundwater sampling tasks (Geoprobe, stream bank and monitoring well) is presented in Figure 13.

As shown in Figure 12, the recent (August 2013) analytical results are generally consistent with the previously measured concentrations and with few exceptions (MW-1) there is a noticeable downward trend in the PCE concentrations. The recent analytical results confirm that PCE is the only constituent that exceeds any South Carolina groundwater quality standard (5 ug/l). These exceedances occurred in four of the eight saprolite monitoring wells and in one (1) of the three PWR wells. Three of the four locations, where concentrations are below the standard, are upgradient well (MW-2) and on the southern boundary of the site, MW-3-1 and MW 5-2. These measurements are consistent with the historical PCE use and prior remediation efforts being located along the northern boundary of the site.

The August 2013 and March 2010 increased PCE concentrations reported in analytical results for the groundwater sample from MW-1-1 is indicative of the potential presence of residual CHC mass in soils near the former sewer holding tank removed in 1997, extending under the northern portions of the building. The potential presence of residual CHC mass under the northern portions of the building is further indicated by the elevated sub-slab vapor results at VSC-6. The higher groundwater elevations may have resulted in groundwater coming into contact with potential residual CHC mass which is normally in the vadose zone. The analytic results for groundwater samples collected at MW 101-PWR have always indicated non-detectable levels of PCE. This data suggest that potential CHC mass

associated with the former sewer holding tank and sewer conveyance to the tank is limited to the soils and shallow groundwater in this area.

3.4 Surface Water

As previously discussed, the surface water sampling program was initiated in September 2008 with 5 stations and has been expanded over time to 16 stations in August 2013. The samples collected during the August 2013 event should represent a relatively wet period after the Greenville area observed as much as 17.65 inches of rain in the 2 month period prior to the August 1 sampling. As shown in Figure 14, representative samples could not be collected from SW-6, SW-12, SW-13 and SW-14 due to the occurrence of a thunder storm during the sampling event.

Similar to historical surface water sample results, the measured PCE concentrations were above South Carolina Water & Organism quality standard (0.69 ug/l) in 8 of the 12 surface water samples, but have historically been below the Organism Only quality standard (3.3 ug/l) at 10 of the 16 stations. PCE has never been detected in samples collected from stations SW-1, SW-2 and SW-3. In addition, PCE was not detected at the recently established station SW-16. As shown on Figure 16, the concentrations observed at the SW stations have historically been relatively constant with a potential downward trend at select stations (SW-4, SW-6 and SW-11).

The stream bank sampling tasks conducted along the southern stream in 2010 and recently along the northern stream, has aided in a refined understanding of the groundwater discharge's impact on the streams. As shown in Figure 3, CHC impacted groundwater is discharging into both the southern and northern streams. Though SW-12 could not be sampled, historical data indicate that CHC impacted groundwater is probably discharging into the storm sewer pipe north of the facility. With the exception of SW-9 to SW-7, the surface water CHC concentrations decrease in a downstream direction. These data demonstrate that after the impacted groundwater discharges into the stream the CHCs are removed from the surface water by volatilization. The SW-9 to SW-7 exception is the result of groundwater with higher CHC concentrations entering the stream near stream bank sample location RBW-9A.

3.5 Potential Source Areas

Four areas were previously identified as potential sources contributing to the observed CHCs in the groundwater and surface water. Data collected to date now suggests that most CHC impacts result from a potential primary source in the vicinity of MW1-1 and VSC-6 and a potential secondary source in the vicinity of the topographic low near MW-107. While two other potential sources (debris area and former wastewater lagoon) may contain some residual PCE, they are not considered significant. No evidence of on-site historic disposal of PCE has been identified; rather the observed sources appear to have the resulted from possible leakage from conveyance systems and/or the release from materials that were contaminated with PCE. PCE has been detected in relatively low concentrations, when compared to solubility of 150 mg/l, at many areas on and downgradient of the facility (although above the groundwater quality standard of 5 ug/l). The groundwater in the southeastern quadrant of the property, as shown in Figure 11, has not been impacted. These observations are the result of the location of the potential source (s), the geologic characteristics underlying the site and the groundwater flow direction.

Potential Primary Source Area: near Former Settling Tank/Use Area – As noted above the potential primary source of the PCE impacts is apparently the area near the former wastewater settling

tank that was "clean closed" in 1997. This area includes the sewer piping that conveyed wastewater to the tank and the area under the building where the PCE was formerly used. The vapor PCE result from VSC-6 (594 ppmv) is the highest impacts observed on-site. . The elevated vapor concentrations at this point and the other nearby vapor sample locations (VSC-2 and VSC-7) indicate that there is potential for residual CHC mass in the soils beneath the facility floor slab. The analytical PCE results for the groundwater sample from MW-1-1, Geoprobe samples NGB-1A(131 ug/l) and NGB-4A (73.8 ug/l), MIP 1-2 log and surface water sample SW-5 further support the potential presence of residual CHC mass in soils and groundwater possibly extending under the northern portion of the building near the former sewer holding tank. Analytical results for the PWR wells indicate that there is insufficient CHC mass (if present) to support downward movement of the CHCs as there were none detected in MW-101-PWR while the adjacent saprolite well MW 1-1 contained 86.7 ug/l of PCE. Similarly, the MW-104-PWR sample contained 4.4 ug/l of PCE while the sample from adjacent well MW 4-1 contained 18.7 ug/l of PCE, again suggesting minimal downward migration.

Potential Secondary Source near Topographic Low Area – There is a topographic low along the northern property boundary near MW- 107 PWR, MIP 7-1, and one of the current stormwater ponds. This location is near a topographic grade change and is along the path of existing site stormwater lines, the existing regional collection sewer and the former sewer line that conveyed wastewater to the wastewater lagoon. Any historic spillage or sewer leakage containing PCE would migrate to this topographic low area. Unlike the other PWR wells (MW-101 and MW-104), the August 2013 CHC concentrations observed in MW-107-PWR (total CHC 68 ug/l) were similar to total CHC concentrations observed in the well in March 2010 and were higher than those observed in December 2012.Since the concentration increased, similar to MW1-1, this implies that there is the potential for residual mass to be near MW-107-PWR and the need for a saprolite well in this area. This observation is consistent with the results at MIP locations 7-1 and 7-2 that indicate elevated CHC concentrations at depths ranging from 30 feet to termination depth of 53 feet below ground.

The NGB Geoprobe results near this low lying area (depth 40 feet) indicate that the areal extent of this potential secondary source is not extensive (Figure 13). NGB-15 and NGB-16 are located approximately 95 and 164 feet east of MW-107-PWR, respectively. The PCE concentrations observed in NGB-15 and NGB-16 were 7 and 8.4 ug/l, respectively. The PCE concentrations in NGB-14 and NGB-13, which are located approximately 70 and 122 feet west of MW-107-PWR, respectively were 0.0 and 1.1 ug/l, respectively.

Potential Debris Area Source – Though monitoring well data collected to date suggest a potential source west of the building, geoprobe and MIP borings results from within the former debris disposal area do not reflect possibility of sufficient CHC mass to support observed downgradient concentrations in MW 6-1 and 8-1. All the DAGB samples collected at 40 feet bgs were less than 14.9 ug/l with an average of 4.9 ug/l and a median of 4.0 ug/l. The highest result in the debris area (37.6 ppb) was collected at DAGB 7-D which was a deeper sample (58.5 feet bgs) and was adjacent to DAGB 7 (14.9 ug/l at a depth of 40 feet bgs).

Potential Source From Former Wastewater Lagoon – Three shallow (2.0, 5.5 and 7.5 below ground surface) soil samples were collected and analyzed for CHCs in 1997 during the regulatory closure of the wastewater lagoon. Though no CHC constituents were detected in the soil samples, CHC constituents were detected in the 2010 groundwater samples collected in the former lagoon at Geoprobe locations FWLGB-1 and FWLGB-2 (Figure 13). The CHC concentration for FWLGB-1 and -2 were 20.1 and

38.4 ug/l, respectively. Geoprobe locations NGB-17 and NGB-18 are just upgradient of the former wastewater lagoon. The CHC concentrations for groundwater samples collected at NGB-17 and NGB-18 were 25.1 and 33.6 ug/l, respectively. Again these concentrations do not represent a possible source material of sufficient mass to result in the down gradient concentrations observed at MW-8 and NWCGP. It is our opinion that the data do not support a potential significant residual PCE mass associated with the former wastewater lagoon.

During the 2013 investigation tasks the wastewater discharge line was investigated by sampling proximal soil gas. As previously noted, two (2) of the locations (SG-1 and SG-2) did not produce usable data as a result of weather conditions. In addition, two (2) samples (SG- 3 and SG-4) provided estimated values while the results for SG-5 indicate that leakage from the discharge pipe would not provide a significant source. As a result additional samples will be collected to further evaluate the potential impact.

3.6 CHC Transport and Fate

As noted above it is our opinion that the potential primary source of the PCE is an area near the former wastewater settling tank that includes the sewer piping that conveyed wastewater to the tank and the area where the PCE was formerly used. Though the exact potential release mechanism is unknown, the data suggests that PCE was released in the area (via leakage from pipes or tank, spillage of liquid or solids, etc.) and migrated through the vadose zone vertically to the upper portion of the groundwater table.

The geologic characterization supports the concept that the potential primary source is the area near the former sewer holding tank. As previously described, the foliations in the micaceous gneiss in this area appear to be near vertical. As a result, groundwater transport appears to be directed south to southwest, along the planes of schistosity. This explains why only low levels of dissolved CHC were detected in the numerous borings along the northwest portion of the building. In particular, the preferential flow along the bedding planes contained the transport as a narrow plume. This preferential flow path appears to be maintained to the southwest as the impacts at NSB-2 and NSB-3 along the northern stream these are in the direction of the hydraulic gradient and the strike of the foliation within the gneiss. The lower concentrations observed in the northern stream at NSB-5a and NSB-6 may be influenced by the contact between the schist and the gneiss in this same general area.

Similarly, in the southern portion of the area, as the CHC are transported westerly, they contact the foliation of the micaesous gneiss and are transported to the southern stream. In this case, the dip of the foliation varies spatially with respect to the hydraulic gradient, and as such, the dissolved plumes are more capable of dispersion. Hence, this, in conjunction with the low levels potentially released in the suspected potential secondary source areas, explains the low dissolved CHC levels detected in the stream bank samples along the southern stream.

The data collected over the past five years (Figure 12) indicate that the concentrations in the groundwater plume are attenuating. With the exception of MW 1-1 and MW107-PWR (near potential source areas), the groundwater concentrations have evidenced as much as 60% a reduction. These same 5 years of data also exhibit a potential attenuation in the surface water concentrations. Since the surface water stations are down gradient of the groundwater wells, any attenuation will predictably lag the groundwater results. The plume discharges into the south and north streams. Once in the stream, the PCE volatilizes due to turbulence in the stream channel.

4.0 Future Characterization and Remediation Recommendations

PCE is the primary dissolved chlorinated compound. It is present within water-bearing zones of the upper saprolite and partially weathered bedrock of the underlying metamorphic and igneous terrain. Groundwater discharges to the northern and southern streams have resulted in dissolved chlorinated compounds present in surface water. Surface water sampling indicates concentrations are attenuated with distance in the streams. Chlorinated hydrocarbon vapors are present beneath the Nutra facility building. The distribution of the vapor concentrations appear to be directly related to the area of the potentially identified source. Following DHEC review, these proposed future activities will be described in detail in a subsequent work plan.

To further delineate the vertical and horizontal extent of the CHC plume and to validate that the plume discharges into the southern and northern streams, we propose installing additional monitoring wells at the locations shown on Figure 17. The monitoring wells include:

- A set of nested monitoring wells (saprolite, PWR and bedrock) west of the confluence of the north and south streams.
- A set of nested monitoring wells (saprolite, PWR and bedrock) north of the north stream, just north of SW-11.
- PWR and bedrock monitoring wells at the MW 8-1 saprolite well location.
- Saprolite and bedrock monitoring wells near the MW 107 PWR well location.
- PWR and bedrock monitoring wells at the MW 6-1 saprolite well location.

To address the possible PCE mass near the potential primary source, we propose initiating the design and installation of a system to mitigate the CHC soil vapors beneath the slab.

An additional soil gas investigation is proposed along the former wastewater lagoon discharge pipe. The investigation will supplement and refine the data previously collected.

* The chlorinated hydrocarbons shown in the table are considered the constituents of concern. There were other constituents detected in low concentrato that were unrelated to the project (asphalt constituents, acetonem benzene, etc.). In addition, 2-propanol, a constituent of isopropol alcohol, was detecte in high concentrations. Isopropyl alcohol was applied near the exterior of the sampling train as a leak detector. The complete laboratory results are in Ap

Dear Mr. Cassidy,

Bunnell-Lammons Engineering, Inc. (BLE) is pleased to submit the attached 2024 Annual Assessment Report on behalf of Nutra Manufacturing, LLC (Nutra) for their facility located at 1050 Woodruff Road in Greenville, South Carolina (Site). This Assessment Report has been prepared in general accordance with Voluntary Cleanup Contract (VCC) 12-5881-RP, between the South Carolina Department of Health and Environmental Control (SCDHEC), currently the South Carolina Department of Environmental Services (SCDES), and Nutra Manufacturing, LLC (Nutra) and the January 2022 *Work Plan for Monitoring Program* submitted to SCDES by BLE on behalf of Nutra and approved by SCDHEC on January 12, 2022.

BLE appreciates the opportunity to provide our professional services on this project. If you have any questions regarding this report, or if we can be of additional service, please feel free to contact us at (864) 288-1265.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

1.0 INTRODUCTION

This 2024 Annual Assessment Report has been prepared by Bunnell-Lammons Engineering, Inc. (BLE) on behalf of Nutra Manufacturing, LLC (Nutra) pursuant to the terms of Voluntary Cleanup Contract (VCC) No. 12-5881-RP, which Nutra has entered into with the South Carolina Department of Health and Environmental Control (SCDHEC), currently the South Carolina Department of Environmental Services (SCDES), in September 2012. This report presents the results of the June 2024 and December 2024 environmental sampling events performed at the Nutra facility (Site) and monthly inspections of the Vapor Extraction System (VES). The Site is located at 1050 Woodruff Road in Greenville, South Carolina (**Figure 1**).

2.0 BACKGROUND INFORMATION

2.1 Site Description and History

The Site consists of one parcel of land, identified by the Greenville County Tax Assessor as Tax Map Number 0547010100202, totaling approximately 15.6-acres (**Figure 2**). The Site is located approximately 4-miles east of the downtown commercial district of Greenville, South Carolina.

The Site currently operates as a Nutra manufacturing facility for the production, storage, and commercial transfer of vitamins and dietary supplements. The primary operations at the Site include weighing and blending of raw materials, production of vitamins and dietary supplements via hard-shell, soft-gel, and compression processes, packaging of finished products, and warehousing of finished goods and raw materials. Facility operations are associated with NAICS Code 325412 – Pharmaceutical Preparation Manufacturing and SIC Code 2834 - Pharmaceutical Preparations.

According to previous environmental reports prepared by Natural Resource Engineering, LLC (NRE), in 2007, a release of tetrachloroethylene (PCE) was identified in surface water and groundwater at the Site in concentrations exceeding South Carolina regulatory standards. In response, the SCDES issued a letter dated March 24, 2008 requiring an environmental assessment be performed to determine the source of PCE as well as the horizontal and vertical extent of the associated contaminant plume. The potential source area of PCE was determined to be near former settling tanks located within the manufacturing building.

Since 2008, multiple environmental investigations have been performed to assess the extent of the contaminant plume in groundwater and surface water. Historically, there have been 25 groundwater monitoring wells associated with the Site (17 on-Site and eight off-Site). Eight of the 25 monitoring wells have been abandoned leaving 17 groundwater monitoring wells in the current groundwater monitoring well network. In addition, 16 surface water monitoring stations have been established in localized drainage features generally west of the Nutra building. The locations of the groundwater monitoring wells and surface water monitoring stations are provided in **Figure 3**. Groundwater and surface water at the Site has been routinely monitored since 2009.

Since March 2009, soil vapor sampling has been performed beneath the manufacturing plant floor and to the north of the manufacturing plant building. In April 2016, a Vapor Extraction System (VES) was installed within the manufacturing plant building near the location of the former settling tanks. The purpose of the VES is to capture and remove chlorinated hydrocarbons, in particular PCE, from sub-surface soils beneath the Site building. The VES and soil vapor sampling network currently consists of one exhaust port, six vapor monitoring wells, and 27 vapor monitoring ports.

In November 2022, the VES system was modified by removing the original blower fan, a RadonAway GP501, and replacing it with an Air Control Industries Multi-Stage 5MS11 centrifugal fan. The fan update increased air outflow rates through the VES from approximately 20 cubic feet per minute (CFM) to approximately 150 CFM.

2.2 Conceptual Site Model

The cumulative environmental investigations at the Site are utilized to develop a Conceptual Site Model (CSM). The CSM concludes the following:

Hydrologic Conditions

- The surface topography of the Site slopes toward the west/southwest. Two creeks occur peripheral to the western portion of the Site – one to the north and one to the south. These creeks merge off-Site into a single channel. The creeks are gaining creeks and act as groundwater discharge zones.
- Groundwater beneath the Nutra property ranges in depth from approximately 20 to 35 feet below the ground surface. The groundwater table as measured from the monitoring wells slopes toward the west/southwest.
- Groundwater flow occurs primarily within two hydrostratigraphic units. The shallow, water-table aquifer soils and the partially weathered rock (PWR) units. The competent bedrock beneath the PWR acts as an aquitard within the subsurface.
- Groundwater movement occurs vertically between the shallow and PWR aquifer units.
- Hydraulic conductivity and water quality measurements across the Site document that the PWR is the primary transmissive hydraulic unit. The PWR unit is the principal zone for groundwater flow, as it is coarser grained and more permeable material than the shallow unit. Both the PWR and shallow units discharge into the creeks.
- Groundwater discharges occur as discrete seepages along the channels of both the northern and southern creeks. In the northern creek, the impacted groundwater discharge appears to occur primarily in the upstream segment, while in the southern creek, the impacted groundwater discharge appears to occur primarily in the central segment.

Contaminant Transport

- PCE was used on-Site during the late 1970s into the 1980s. During this time, PCE was utilized as a cleaning agent during manufacturing operations.
- A confirmed PCE source area of contamination is located in the northern portion of the manufacturing building, specifically in the vicinity of the former settling tanks and possibly beneath the area where the PCE was formerly used in the manufacturing building (located near vapor port VP-16 and VSC-6).
- No evidence of non-aqueous phase liquids (NAPL) has been identified on-Site or off-Site during previous environmental investigations.
- Chlorinated hydrocarbons, composed of PCE and its daughter products (trichloroethylene (TCE) and cis 1,2 Dichloroethylene (DCE)) are present in the dissolved and vapor phases in the subsurface on the Nutra Site.
- In the hydraulically upgradient area near the manufacturing building, dissolved PCE in groundwater is observed primarily in the shallow aquifer. As the contaminant plume migrates downgradient, it also moves deeper in the aquifer and is present in the PWR layer (i.e., MW-107). At the Site boundary and off-Site, the dissolved plume occurs in both the shallow aquifer and PWR.
- Groundwater seepage into down-gradient creeks has produced a localized area where dissolved phase contaminant concentrations are detected in surface water.
- Sediment and near surface soil samples collected at off-Site locations as part of a supplemental investigation did not detect chlorinated hydrocarbons. This indicates that contaminant impacts down-gradient of the facility are likely limited to groundwater and surface water.
- Based on the historic data collected, the contaminant plume is confined vertically by the underlying bedrock.
- Contaminant concentrations have been identified in soil vapor samples collected from beneath the building's concrete floor slab. The results from the sub-slab vapor sampling events indicate that

residual contaminant mass is primarily in the vicinity of the former settling tanks and the area where the PCE was reportedly used and/or handled (currently the Gelcap Area).

- Ongoing VES operations continue to remove the chlorinated hydrocarbon mass (PCE, TCE, and DCE) from beneath the building slab.

3.0 FIELD INVESTIGATION

The following scope of services was performed in general accordance with the January 2022 *Work Plan for Monitoring Program* prepared by BLE and approved by the SCDES on January 12, 2022. The Work Plan was prepared pursuant to VCC 12-5881-RP. The assessment and remediation activities performed during 2024 included the following:

Second Quarter of 2024

- Collect analytical samples from the 17 groundwater monitoring wells;
- Collect analytical samples from the 17 surface water monitoring stations;
- Collect soil vapor samples from the 26 vapor monitoring ports, 6 vapor monitoring wells, and the exhaust port associated with the VES.

Fourth Quarter of 2024

- Collect soil vapor samples from seven (7) vapor monitoring ports and two (2) vapor monitoring wells.

Throughout the entire year, monthly inspections of the VES were performed to record the differential pressure between the interior of the building and below the floor slab of the building.

3.1 Groundwater Assessment

BLE personnel obtained groundwater elevation measurements on June 26,2024. Nutra currently utilizes Onset Hobo U-20L (Hobo) units to collect continuous temperature and pressure data from the active groundwater monitoring wells, MW-1 through MW-4, MW-6, MW-7-1, MW-7-2, MW-8, MW-11, MW-101, MW-104, MW-106 through MW-108, MW-111, and MW-112. BLE field personnel were to collect groundwater field parameter data from these wells using the Hobo units and discrete groundwater depth and temperature field measurements from the remaining monitoring wells at the time of sampling (Table 1).

BLE utilized Passive Diffusive Sample (PDS) bags to collect analytical samples from each of the groundwater monitoring wells associated with the current monitoring well network. On June 26, 2024, the PDS bags were retrieved, and analytical groundwater samples were collected. The groundwater samples were collected in general accordance with Environmental Protection Agency (EPA) EPA Region 4 environmental sampling guidelines: *US EPA Region 4 SESD Operating Procedure, Groundwater Sampling,* (SESDPROC-301-R6, April 22, 2023).

The groundwater samples were submitted to a South Carolina certified laboratory, Pace Analytical Services, LLC (Pace), for analysis of Volatile Organic Compounds (VOCs) via EPA Method 8260D. The sample containers were sealed, marked with identifying numbers, placed immediately in sample coolers, secured, and maintained at less than 4º C. The samples were transported to the environmental laboratory for analysis under strict chain-of-custody.

3.2 Surface Water Assessment

Surface water samples were collected from 17 surface water monitoring stations associated with the Site on June 27, 2024. Nutra currently utilizes a Hobo unit to collect continuous temperature and pressure data at one surface water monitoring station, SW-9. BLE collected surface water field parameter data from this surface water monitoring station using the Hobo unit. BLE collected discrete surface water samples and

field measurements from the remaining surface water monitoring stations at the time of the sampling event. Measured field parameters included dissolved oxygen, oxidation reduction potential, specific conductance, temperature, and pH. Surface water sampling was performed in general accordance with *EPA Region 4 SESD Operating Procedure, Surface Water Sampling*, (SESDPROC-201-R6. April 22, 2023).

The surface water samples were placed into laboratory prepared sample containers and submitted to Pace for analysis of VOCs via EPA Method 8260. The sample containers were sealed, marked with identifying numbers, placed immediately in sample coolers, secured, and maintained at less than 4º C. The samples were transported to the environmental laboratory for analysis under strict chain-of-custody.

3.3 Soil Vapor Assessment

On June 27, 2024, BLE field personnel collected soil vapor samples from each sample location associated with the VES (**Figure 4**). Specifically, BLE collected samples from the exhaust port (VES-Exhaust), the six vapor monitoring wells (VMW-1s, VMW-1d, VMW-2s, VMW-2d, VMS-3s, and VMW-3d), and the 26 vapor monitoring ports (VSC-2 through VSC-10, VSC-12 and VP-1 through VP-16). BLE attempted to collect a sample from VSC-1, however water was in the monitoring port at the time of sampling which prevented the collection of a soil vapor sample.

On December 12, 2024, BLE field personnel completed the fourth quarter sampling requirements by collecting soil vapor samples from the seven (7) vapor monitoring ports (VP-1, VP-2, VP-5, VSC-2, VSC-6, VSC-7 and VSC-8) and two (2) vapor monitoring wells VMW-2s and VMW-2d.

The soil vapor samples were collected by employing unused Teflon tubing to connect the vapor port sampling tap with a laboratory prepared Summa cannister. The Summa cannister was prepared by the laboratory to collect the vapor sample over an approximate 10-minute sample period. Soil vapor samples were collected in general accordance with EPA Region 4 environmental sampling guidelines, *US EPA Region 4 SESD, Operating Procedure* S*oil Gas Sampling* (SESDPROC-307-R4, April 22, 2023).

Following sample collection, the soil vapor samples were submitted to Pace for analysis of VOCs by EPA Method TO-15.

4.0 INVESTIGATION RESULTS

As described in Section 3.0, BLE collected analytical samples from groundwater, surface water, and soil vapor. The samples were analyzed by a South Carolina certified laboratory. The complete analytical reports are presented in **Appendix B** and **Appendix C** and are summarized below.

Groundwater quality results were compared to the South Carolina State *Primary Drinking Water Regulation R.61.58* (MCL) or, if not specified in R.61-58, to the EPA Region IV Regional Screening Level (RSL) for "TapWater". Surface water quality results were compared to the SCDES *Water Classifications and Standards, 6 S.C. Code Ann. Regs. 61-68 – Organism Only* (dated June 27, 2014).

4.1 Potentiometric Results

In June 2024, the recorded depth to groundwater ranged between 19.40-feet below the top of casing (BTOC) in monitoring well MW-106 and 29.56-feet BTOC in monitoring well MW-3. Generally, groundwater was shallower in monitoring wells located hydraulically downgradient, nearest the northern and southern creeks.

The groundwater flow direction was generally toward the southwest. There also appears to be a downward vertical gradient (recharging condition) in groundwater around the Site building and presumed source area. The recharging condition is evidenced in shallow/deep well clusters; MW-1/MW-101 and MW-4/MW-104. Historically, the monitoring well clusters located in the downgradient areas nearer the creeks (MW-8/MW-108 and MW-12/MW-112) have an upward vertical gradient (discharging condition).

A table summarizing the groundwater surface elevation is provided as **Table 1,** and potentiometric maps for the shallow and PWR aquifer units are included as **Figure 5A and Figure 5B**.

4.2 Groundwater Analytical Results

Seventeen (17) groundwater samples were collected during the 2024 environmental assessment. A map of the PCE concentrations in groundwater is shown as **Figure 6A.**

PCE was the only contaminant of concern detected in groundwater at concentrations exceeding its SCDES MCL. Four (4) additional VOCs were detected at concentrations exceeding laboratory minimum detection limits; however, the reported concentrations were below the respective regulatory standard.

In general, PCE concentrations in groundwater have steadily decreased over the past several years. Specifically, in 2021 PCE concentrations in groundwater exceeded their regulatory standard in nine (9) monitoring wells. During the 2024 sampling event, PCE concentrations in groundwater only exceeded their regulatory standard in six (6) monitoring wells and the PCE concentrations had decreased in each of the nine (9) wells.

Table 2 presents a summary of the groundwater analytical results.

4.3 Surface Water Analytical Results

Seventeen (17) surface water samples were collected during the 2024 environmental assessment. A map of the PCE concentrations in surface water is shown as **Figure 6B.**

PCE was the only VOC detected in surface water at concentrations above laboratory minimum detection limits. Specifically, PCE was detected in four (4) sample locations above laboratory minimum detection limits but below its regulatory standard. PCE concentrations in surface water have remained below their regulatory standard since 2022.

Table 3 presents a summary of the analytical results for the surface water samples.

4.4 Soil Vapor Analytical Results

During both the second quarter and fourth quarter 2024 sampling events multiple VOCs were detected in vapor samples at concentrations above the laboratory minimum detection limits. Concentrations of the primary contaminant of concern, PCE, continue to decrease likely due to the modifications made to the VES system in November 2022. A summary of the soil vapor results are provided as **Table 4**.

4.5 Vapor Extraction System Performance

The VES began operating in April 2016, and the system has continued to remove PCE mass from beneath the building slab since the VES startup. In November 2022, the VES was modified by installing a larger blower fan which has increased flow rates within the VES. The increased flow rate has resulted in an increased effectiveness of the overall VES.

The VES is currently on a monthly maintenance and inspection schedule. The monthly schedule includes checking the vapor pressure beneath the slab at 15 vapor monitoring ports, the vapor pressure at the exhaust port, and the volume of condensate generated. BLE will continue the monthly maintenance and inspection schedule. A table summarizing the inspections performed during 2024 is included as **Table 5**.

Nutra has authorization to discharge condensate into the on-Site sewer system for pre-treatment prior to discharge into the Renewable Water Resources (ReWa) municipal sewer system. As shown on **Table 5**, there was no measurable condensate generated in 2024. The lack of condensate generation is attributed to the efforts taken by Nutra to reduce water infiltration into the subsurface, such as pipe repair/replacement and sealing the surface asphalt around the building.

5.0 CONCLUSIONS

The 2024 assessment and remediation activities performed at the Nutra Site included the following:

- Monthly inspections of the VES.

Second Quarter of 2024

- Collect analytical samples from the 17 groundwater monitoring wells;
- Collect analytical samples from the 17 surface water monitoring stations;
- Collect soil vapor samples from the 26 vapor monitoring ports, 6 vapor monitoring wells, and the exhaust port associated with the VES.

Fourth Quarter of 2024

- Collect soil vapor samples from seven (7) vapor monitoring ports and two (2) vapor monitoring wells.

The scope of services was performed in general accordance with the January 2022 *Work Plan for Monitoring Program* prepared by BLE and approved by the SCDES. The Work Plan was prepared pursuant to VCC 12-5881-RP.

The following provides the conclusions of this environmental assessment.

- PCE was the only VOC present in groundwater above its regulatory standard.
- Four (4) additional VOCs were detected in groundwater at concentrations exceeding laboratory minimum detection limits but below their respective regulatory standard.
- PCE concentrations in groundwater continue to decrease.
- PCE was the only VOC detected in surface water samples at concentrations above laboratory minimum detection limits.
- No VOCs, including PCE, were present in surface water above their respective regulatory standard.
- PCE concentrations in surface water continue to decrease.
- Multiple VOCs were detected in vapor samples at concentrations above laboratory minimum detection limits.
- The VES remains operational and effective in recovering chlorinated hydrocarbon vapors, particularly PCE.

6.0 RECOMMENDATIONS

BLE has prepared this *2024 Annual Assessment Report* on behalf of Nutra, pursuant to the terms of Voluntary Cleanup Contract (VCC) No. 12-5881-RP. The goal of this assessment was to continue to evaluate the dissolved phase PCE contaminant plume in groundwater and surface water as well as to continue to monitor the effectiveness of the VES for removing chlorinated hydrocarbon vapors from beneath the on-Site building.

Based on the results of this assessment, BLE recommends the following:

- Continued implementation of the January 2022 *Work Plan for Monitoring Program.*
- Continued monthly maintenance and inspection of the VES, including measuring pressure at select vapor ports, analyzing the pressure at the VES vault, and measuring the volume of condensate generated.

7.0 QUALIFICATION OF REPORT

This report is for the use and benefit of, and may be relied upon by Nutra or any of their affiliates pursuant to previously agreed upon terms and conditions. Reliance on this document by any party other than Nutra may occur only upon the express written consent of Nutra and upon the relying third party's execution of a written Secondary Client Agreement between the relying third party and BLE. The services provided have been performed for Nutra and this report may or may not be suitable for any and/or all of the purposes of the relying third party. Use of this report for purposes beyond those reasonably intended by Nutra and BLE will be at the sole risk of the user. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations placed on the scope, nature and type of BLE's services as stated in BLE's proposal and/or this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the site that were not discoverable within the authorized scope of the assessment. BLE makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied.

The activities and evaluative approaches used in this assessment are consistent with those normally employed in projects of this type. Our evaluation of site conditions has been based on our understanding of the site and project information, and the data obtained in our exploration.

Regardless of the thoroughness of an environmental site assessment, there is always the possibility that conditions between borings will be different from that at the specific boring location due to the variability of subsurface conditions. Therefore, it was not possible to identify all conceivable forms of contamination at this site. The primary objective was to perform sufficient work to assess specific areas of concern. It was not the purpose of this evaluation to fully define the degree or extent of all forms of contamination.

Notes:
Results are reported in micrograms/liter
SCDHEC Water Classifications and Standards, 6 S.C. Code Ann. Regs. 61-68 - Organism Only
Highlighted cells above the SCDHEC Water Classifications Standard
Bold cells indicate detections above the laboratory method detection limit.
Shaded cells indicate concentrations above regulatory standard
J - Estimated value between practical quantitative limit and method detection limit.
NE - Not Established

Notes:
Results listed in micrograms per meter cubed
Bold cells indicate detections above the laboratory method detection limit.
J = estimated value between practical quantitative limit and method detection limit.

Re: No Further Action
Piedmont Natural Gas Co., 100 Woodruff Industrial Ln., Greenville, SC
UST Permit # 12465
Release reported March 21, 1990
IGWA report received October 18, 2012
Greenville County

Dear Ms. Mooney:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) has reviewed the referenced report.

As laboratory analyses of soil samples for benzene, toluene, ethylbenzene, xylenes, naphthalene, methyl tertiary butyl ether (MtBE), and PAHs are below established risk based screening levels; the reported release does not present a significant threat to human health or the environment. Therefore, no further action will be required at this time. However, if any contamination becomes evident which could be attributed to this UST system, this office may, under authority established in the South Carolina UST Control Regulations R.61-92 Part 280.52/280.73, require additional site rehabilitation activities. **The decision for requiring no further action pertains only to the release from the permitted UST system reported on March 21, 1990 and is based solely on the information provided in the referenced report.**

On all correspondence related to this facility, please reference UST Permit number 12465. If you have any questions, or need additional information, please contact me at (803) 896-6218, e-mail me at fordrj@dhec.sc.gov, or fax me at (803) 896-6245.

Sincerely,

Jamie Ford

Re: QAPP Contractor Addendum Directive for Tier I
Food Mart 111, 3687 St Matthews Rd, Orangeburg, SC
UST Permit # 10633
Release Reported October 9, 2012
Phase II Environmental Site Assessment Report received October 9, 2012
Orangeburg County

Dear Mr. Smith:

The Underground Storage Tank (UST) Management Division has reviewed the referenced report submitted by KLM Environmental, LLC on your behalf. The report indicates that groundwater concentrations of benzene and methyl tert butyl ether are above risk-based screening levels (RBSLs).

To determine what risk the referenced release may pose to human health and the environment, and in accordance with Section 280.65 of the South Carolina Underground Storage Tank Control Regulations, implementation of a Tier I Assessment as outlined in the UST Quality Assurance Program Plan (QAPP) is necessary. The Tier I must be conducted in accordance with the UST QAPP and must be conducted in compliance with all applicable regulations once the site specific QAPP Contractor Addendum is approved. A copy of the UST QAPP is available at http://www.scdhec.gov/environment/ lwm/usthome/Qapp.htm. **Your contractor must complete and submit the QAPP Contractor Addendum within thirty (30) days of the date of this letter.** A cost agreement is not required unless your contractor thinks the total monitoring well footage will exceed 75 feet or there are any water supply wells within 500 feet of this facility. **Please note that approval from the Agency must be issued before work begins.**

According to Division records, the release at the facility was reported to the Agency on October 9, 2012. In accordance with Section 44-2-40(D) of the State Underground Petroleum Environmental Response Bank (SUPERB) Act, you are responsible for the first $25,000 of site rehabilitation costs. To insure that expenditures for the Tier I apply to the $25,000 deductible, costs must be preapproved and a cost agreement provided once the site specific QAPP contractor addendum is approved. Our records indicate that a site rehabilitation contractor has not been selected for this release. **The enclosed form should be completed and returned to my attention within fifteen (15) days of the date of this letter.** A list of certified contractors is enclosed for your information.

Please note that in accordance with R.61-92, Subpart H, Section 280.114, you are required to notify the Division by certified mail within ten (10) days of commencing a voluntary or involuntary proceeding in bankruptcy. State law also requires that an owner/operator or guarantor that files for bankruptcy protection must immediately submit appropriate forms documenting that entity's ability to demonstrate financial responsibility.

On all correspondence regarding this site, please reference UST Permit # 10633. If you have any questions concerning this correspondence, please call me at (803) 896-6218. I can also be reached by email at fordrj@dhec.sc.gov or by fax at (803) 896-6245.

Sincerely,

Jamie Ford

UNDERGROUND STORAGE TANK (UST) OWNER/OPERATOR LEAD INFORMATION SHEET

1. CONTRACTOR OF CHOICE

As the UST Owner/Operator of the UST Permit # 10633, I would like to use the contractor or person(s)* listed below and request that they represent me for:

☐ Tier I

☐ All future assessment scopes. **

Name of Contractor/Person(s) _____

Address _____

_____

_____

Telephone Number _____ Agency UST Certification Number _____

Note: After September 20, 1997, rehabilitation activities must be performed by a SC Certified Site Rehabilitation Contractor.

*indicate if the person listed is your own employee

** if you would like the contractor to perform all future assessment activities at this and/or other UST sites that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.

2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above? _____ Yes _____ No (please initial)

Financial Relationship: A connection or association through a material interest of sources of income which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancée.

3. PAYMENT

The first $25,000.00 in eligible site rehabilitation costs will be applied against the applicable SUPERB deductible, upon submittal of the canceled check (front and back) or a notarized statement from the contractor verifying payment.

For eligible costs exceeding the $25,000.00 deductible, you can pay the contractor and, upon the submittal of the canceled check (front and back) or a notarized statement from the contractor verifying payment, be compensated from the SUPERB Account, or have payment issued directly from the SUPERB Account to the contractor. (check one)

_____ For eligible costs exceeding the deductible, I request that payment be made to me after I have paid the contractor.

_____ For eligible costs exceeding the deductible, I request that payment be made directly to the contractor.

(Note: all costs must receive prior financial approval from the Agency regardless of payment option.)

Underground Storage Tank Owner/Operator Signature _____

Printed Name _____

Date Signed _____

Re: Initial Groundwater Assessment (IGWA) Report
Piedmont Natural Gas Co., 100 Woodruff Industrial Lane
Greenville, Greenville County, South Carolina
UST Permit #12465
Terracon Project No. 86117069

Dear Mr. Ford:

Please find enclosed the *IGWA Report* for the aforementioned site located at 100 Woodruff Road in Greenville, South Carolina. Terracon Consultants, Inc. (Terracon) performed the IGWA at the Department's request dated July 27, 2012 (J. Ford to A. Mooney).

Terracon was unable to install a groundwater monitoring well (MW-1) due to shallow bedrock conditions encountered at 15 feet (MW-1 boring) and 7 feet (MW-1 offset boring). No groundwater was detected in the soil borings above the competent bedrock. A soil sample was collected at the soil/bedrock interface in the MW-1 soil boring for laboratory analysis. Constituents of concern were not detected above risk-based screening levels from the MW-1 soil sample. Due to minimal soil impacts, shallow bedrock conditions with no groundwater, and no receptors within a 250 foot radius of the petroleum release, Terracon recommends the petroleum release be considered for no further action. If you have any questions or comments regarding the findings of the IGWA, please contact me at 864-292-2901 or cdeady@terracon.com.

Sincerely,

TERRACON CONSULTANTS, INC.

Craig D. Eady, P.G.
Senior Geologist, SC License No. 1099

Enclosure

RECEPTOR & SITE DATA		
Are any drinking water supply wells (public or private) or surface water supply intakes within 1,000 feet of the UST?		NO
Are irrigation or other non-drinking water wells located within 1,000 feet of the UST?		NO
Are other potential receptors (i.e., utilities, surface water, wetlands, etc.) less than 500 feet from the UST?		NO

Underground utilities are identified within 500 feet of the site. The utilities are buried along Woodruff Industrial Lane.

The current use of the site is for Piedmont Natural Gas Company operations and maintenance division. Adjacent properties consist of wooded land to the north and to the west; Target retail store to the east and Woodruff Industrial Lane followed by commercial businesses to the south.

SOIL & BORING/MONITORING WELL DATA	
Primary Soil Type	**Sandy silt / Partially weathered rock**
Well Installation Method/Date	**Hollow Stem Auger/August 16, 2012**

RE: Project: PNG-IGWA 86117069
Pace Project No.: 92128437

Dear Mr. Eady:
Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Godwin for
Kevin Herring

PROJECT NARRATIVE

Project: PNG-IGWA 86117069
Pace Project No.: 92128437

Method: EPA 6010
Description: 6010 MET ICP
Client: Terracon
Date: August 29, 2012

General Information:
1 sample was analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3050 with any exceptions noted below.

Initial Calibrations (Including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

PROJECT NARRATIVE

Project: PNG-IGWA 66117069
Pace Project No.: 92128437

Method: EPA 8270 by SIM
Description: 8270 MSSV MW PAH by SIM
Client: Terracon
Date: August 29, 2012

General Information:
1 sample was analyzed for EPA 8270 by SIM. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: OEXT/18648

A matrix spike and matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92128437001

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- MS (Lab ID: 817789)
  - Benzo(b)fluoranthene
  - Benzo(g,h,i)perylene

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 817789)
  - Benzo(b)fluoranthene
  - Benzo(g,h,i)perylene

R1: RPD value was outside control limits.
- MSD (Lab ID: 817790)
  - Benzo(b)fluoranthene

QUALIFIERS

Project: PNG-IGWA 86117069
Pace Project No.: 92128437

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Acid preservation may not be appropriate for 2-Chloroethylvinyl ether, Styrene, and Vinyl chloride.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A	Pace Analytical Services - Asheville
PASI-C	Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

26	Does the report include a brief discussion of the aquifer evaluation and results?			X
27	Does the report include a brief discussion of the fate & transport models used?			X

28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			X
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			X
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			X
31	Have recommendations for further action been provided and explained?	X		
32	Has the soil analytical data for the site been provided in tabular format? (Table 1)	X		
33	Has the potentiometric data for the site been provided in tabular format? (Table 2)			X
34	Has the current and historical laboratory data been provided in tabular format?			X
35	Have the aquifer characteristics been provided and summarized on the appropriate form?			X
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			X
37	Has the topographic map been provided with all required elements? (Figure 1)	X		
38	Has the site base map been provided with all required elements? (Figure 2)	X		
39	Have the CoC site maps been provided? (Figure 3 & Figure 4)			X
40	Has the site potentiometric map been provided? (Figure 5)			X
41	Have the geologic cross-sections been provided? (Figure 6)			X
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			X
43	Has the site survey been provided and include all necessary elements? (Appendix A)			X
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B)	X		
45	Is the laboratory performing the analyses properly certified?	X		
46	Has the tax map been included with all necessary elements? (Appendix C)			X
47	Have the soil boring/field screening logs been provided? (Appendix D)	X		
48	Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)			X
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			X
50	Have the disposal manifests been provided? (Appendix G)	X		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			X
52	Has all fate and transport modeling been provided? (Appendix I)			X
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			X
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	X		

Explanation for missing or incomplete information

COMMISSION MEETINGS

Unless otherwise noted, Greenville Water Commission meetings are held on the first Tuesday of each month at 8:15 a.m. Meeting agendas, minutes and schedule are posted online at www.greenvillewater.com.

Providing High Quality Drinking Water

Greenville Water is pleased to present our 2024 Water Quality Report. Each year, the team at Greenville Water works diligently to protect our watersheds, ensure our treatment practices are highly effective, and provide you, our customers, with drinking water that meets and exceeds all federal and state drinking water standards. Once again, we are happy to report that Greenville Water meets all of the strict drinking water standards established by the Environmental Protection Agency (EPA) and the South Carolina Department of Environmental Services (SCDES). In order to protect its customers, Greenville Water and SCDES collected 22,984 samples and performed 96,694 tests during 2024. Greenville Water ensures your water quality by testing water samples collected during the treatment process and as the water is delivered to customers through 3,165 miles of pipeline. The 2024 Water Quality Report indicates that our drinking water meets all federal and state drinking water standards.

Where Does My Drinking Water Come From?

Greenville Water draws water from three sources: Table Rock Reservoir, North Saluda Reservoir and Lake Keowee. Table Rock and North Saluda Reservoirs are both located in the foothills of the Blue Ridge Mountains in northern Greenville County. Greenville Water owns 100 percent of both watersheds. Greenville Water regularly patrols and carefully maintains these uninhabited, pristine lands. The properties are further protected by a Conservation Easement with The Nature Conservancy. Lake Keowee is owned by Duke Energy. In 2013, Greenville Water obtained two South Carolina Surface Water Withdrawal permits, one for the Stovall Treatment Plant and one for the Adkins Treatment Plant. The Stovall Treatment Plant has two supply sources, Table Rock Reservoir (2,077 million gallons per month [MGM]) and North Saluda Reservoir (1,860 MGM). The Adkins Treatment Plant has one supply source, Lake Keowee (4,650 MGM).

Source Water Protection is Important

To raise awareness about the ways in which water pollution can impact your drinking water, SCDES has identified potential sources of contamination for each drinking water source in the state.

More information on source water assessment can be found at: https://www.des.sc.gov/programs/bureau-water/source-water-protection and Greenville Water's Source Water Assessment can be reviewed upon request.

Abbreviations

AL	Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
LRAA	Locational Running Annual Average: The highest average concentration for four consecutive quarters at all sampling locations.
MCL	Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
MCLG	Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MRDL	Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water without an unacceptable possibility of adverse health effects. There is convincing evidence that addition of a disinfectant is necessary for the control of microbial contaminants.
MRDLG	Maximum Residual Disinfectant Level Goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of the disinfectants to control microbial contaminants.
NA/ND	Not Applicable: Does not apply. Ranges are not applicable for sampling conducted by SCDES. Not Detected: Not detected or below detection limits.
NR	Monitoring not required, but recommended.
NTU	Nephelometric Turbidity Units: Units of measure to indicate water clarity.
ppb	Parts per billion: This is the same as micrograms per liter, or one penny out of $10,000,000.
ppm	Parts per million: This is the same as milligrams per liter, or one penny out of $10,000.
ppt	Parts per trillion: This is the same as nanograms per liter, or one penny out of $10,000,000,000.
SU	Standard Units: Unit of measure to indicate water acid/base scale (pH).
TT	Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
Turbidity	Measure of water clarity and filtration effectiveness.

How Much Is That?

Parts Per Million (ppm)
1 drop in a hot tub = 1 ppm

Parts Per Billion (ppb)
1 drop in an Olympic size swimming pool = 1 ppb

Parts Per Trillion (ppt)
1 drop in a 6-acre lake = 1 ppt

NEED WATER FOR COMMUNITY EVENTS? GREENVILLE WATER HAS THE SOLUTION!

Greenville Water provides drinking water for outdoor community events held within our service area. We do this as a public service to support the community and share information about tap water.

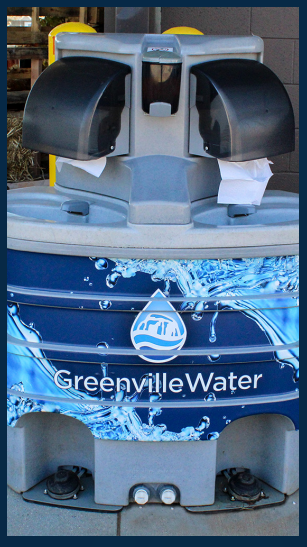

The Quench Buggy and Water Buffalo are designed to dispense 400 gallons of clean, refreshing tap water into cups or reusable bottles. It is an environmentally friendly way to serve water at your event!

Just as important, we can also provide Hand Wash Stations for outdoor events. Our staff will deliver the stations, fill them with water and stock the station with paper towels and soap. We have four stations available.

To view guidelines and reserve the Quench Buggy, Water Buffalo and/or Hand Wash Stations for your event, please visit www.greenvillewater.com/community-outreach.

Adkins Highest Amount Detected	0.07
Distribution System Average	0.25

How it gets in the water: Soil runoff.

**Turbidity is a measure of water clarity and a good indicator that the treatment process is removing tiny particles.*

***Results obtained by SCDES.*

As part of the Unregulated Contaminant Monitoring Rule, Greenville Water tested the finished water at both the Adkins and Stovall Water Treatment Plants for per- and polyfluoroalkyl substances (PFAS) in 2014, and none were detected. As a follow up, Greenville Water conducted additional PFAS testing in 2019, 2021, 2022, 2023 and 2024 at our Table Rock and North Saluda Reservoirs, as well as Lake Keowee. None of the compounds were detected in any of the samples.

Greenville Water conducted two rounds of UCMR5 sampling in 2024 as required by the EPA. None of the 29 PFAS chemicals or lithium were detected in either sampling event.

Sample Results

Lead and Copper Rule *(Samples Taken 2024)*

Lead (ppb)

(sampled at customer's kitchen tap)

Households Exceeding AL	Ideal Goal (MCLG)	0
1*	90th Percentile	0
✓ No Violation	Action Level	15

How it gets in the water: Corrosion of household plumbing.

Copper (ppm)

(sampled at customer's kitchen tap)

Households Exceeding AL	Ideal Goal (MCLG)	1.3
0	90th Percentile	0.093
✓ No Violation	Action Level	1.3

How it gets in the water: Corrosion of household plumbing.

Greenville Water after an extensive record search, field investigation and modeling has determined that we do not have any lead service lines in our distribution system. For additional information please visit our website at https://www.greenvillewater.com/water-resources/water-quality.

Lead & Copper: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Greenville Water is responsible for providing high-quality drinking water, but cannot control the variety of materials used in private household plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your drinking water, you may wish to have the water inside your home tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

**A repeat sample collected at this site had no lead detected.*

IMPORTANT INFORMATION FROM THE EPA

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention guidelines on appropriate means to lessen the risk of infection by Cryptosporidium or other microbial contaminants are also available from the EPA's Safe Drinking Water Hotline (800-426-4791).

WHAT IF I HAVE QUESTIONS?

If you would like more information about water treatment techniques or about our water quality, contact Greenville Water's Laboratory at (864) 241-7838. You can also visit our website at www.greenvillewater.com or contact us by email at laboratory@greenvillewater.com.

How We Clean the Water

Water found in nature contains substances such as minerals, salts and metals, while viruses and bacteria can be introduced into water from farm animals, septic systems, or wild animals.

While Greenville Water's private reservoirs are protected from outside development and toxic chemical waste, we continue to monitor and treat the water diligently to ensure the highest quality water is distributed to the Upstate through our two award-winning water treatment plants.

The Witty Adkins Treatment Plant, a conventional filtration plant with a current capacity of 90 million gallons per day (MGD), draws water from Lake Keowee. The L.B. Stovall Treatment Plant provides filtration for all water drawn from the Table Rock and North Saluda Reservoirs with a capacity of 75 MGD. Stovall is one of the largest plants in the United States to use an innovative flotation process for particle removal (see Step 2 below).

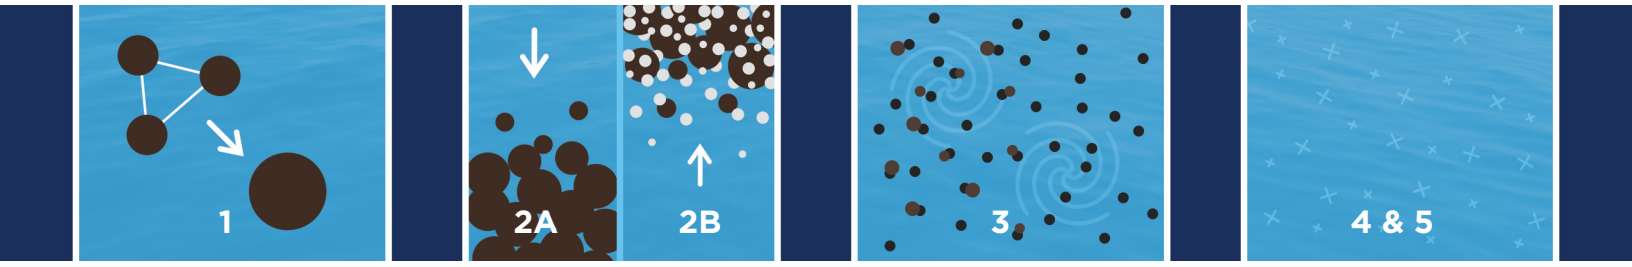

All treatment plants are maintained and monitored by State Certified Environmental Systems Operators who are thoroughly trained to perform routine chemical and physical testing for water treatment.

Greenville Water
trust THE tap
QUALITY WATER. SUSTAINABLE FUTURE.

Water that comes from your faucet is much more regulated than bottled water from stores and vending machines. Bottled water is tested less frequently than water from your tap water provider and stored in plastic containers that can leach toxic chemicals. There is no required testing for plastic bottles leaching toxins into the water, or testing for possible bacteria that might form in water bottles.

The Safe Drinking Water Act requires that public tap water providers conduct comprehensive water quality testing by certified laboratories, in addition to providing annual water quality reports to water customers. Greenville Water goes above and beyond state and federal requirements to ensure that your water is protected and monitored from source to tap — and it tastes great, too! We were voted ***South Carolina's Best Tasting Water*** in 2024 at the South Carolina Environmental Conference.

The Stovall and Adkins Water Treatment Plants use two approved methods of treating the water:

STEP 1:
COAGULATION

The water we collect from nature is mixed with alum to coagulate dirt to form larger particles, along with small amounts of sodium hydroxide for pH adjustment.

STEP 2:
SEDIMENTATION OR DISSOLVED AIR FLOTATION (DAF)

(A) Adkins uses settling, meaning that over time the larger particles fall to the bottom where they are removed. (B) Stovall, however, uses DAF to float the particles to the surface using pressurized air bubbles, where they are then scraped off from the top of the water.

STEP 3:
FILTRATION

The remaining water flows through filters made of layers of fine materials, like sand or coal. These layers stop even smaller particles of contaminants from getting through, and only very clear water is left.

STEP 4:
DISINFECTION

We add a small amount of chlorine combined with ammonia — known as chloramines — to protect against water-borne diseases.

STEP 5:
OTHER CHEMICAL ADDITIONS

Fluoride — the same thing in your toothpaste — is added at the last step in accordance with EPA guidelines to help prevent tooth decay. An ortho/polyphosphate blend is added to protect the pipes from corrosion as the water travels to your home.

Shares

Overview

EWG's drinking water quality report shows results of tests conducted by the water utility and provided to the Environmental Working Group by the South Carolina Department of Health & Environmental Control, as well as information from the U.S. EPA Enforcement and Compliance History database (ECHO). For the latest quarter assessed by the U.S. EPA (April 2024 - June 2024), **tap water provided by this water utility was in compliance with federal health-based drinking water standards.**

LEARN ABOUT LEAD IN THIS UTILITY →

Legal does not necessarily equal safe.

- Getting a passing grade from the federal government does not mean the water meets the latest health guidelines.
- Legal limits for contaminants in tap water have not been updated in almost 20 years.
- The best way to ensure clean tap water is to keep pollution out of source water in the first place.

Suspected industrial discharges of PFAS

Appendix VIII – Qualifications of Environmental Professional and Staff

Edward Brantley

Staff Scientist

PROJECT ROLE
Staff Scientist

LOCATION
Columbia, South Carolina

EDUCATION
- Bachelor of Arts in Environmental Studies, Wofford College, 2021

YEARS OF EXPERIENCE
Joined S&ME in 2024 with one year of experience.

CERTIFICATIONS
- 40-hour HAZWOPPER
- Wilderness First Aid & Safety

Mr. Brantley is a Staff Scientist for S&ME's Columbia, South Carolina location. Typical projects include jurisdictional determination requests for state and federal agency coordination, protected species assessments including U.S. Fish and Wildlife Service (USFWS) Section 7 Consultation and Biological Assessments, Phase I ESAs, and NEPA HUD Reviews.

Mr. Brantley has performed dozens of soil and groundwater contamination investigations associated with UST, Industrial, and Commercial sites throughout the state, and various kinds of Environmental Remediation events such as AFVR extraction events. Mr. Brantley has also assisted in Asbestos surveying, vapor pin installation, monitoring well installation and removal, site surveying, Phase II/VCC field work, and seismic surveying.

Project Experience

Environmental Site Assessments
Various counties in SC, NC, and GA (2023-present)

Performed multiple Phase I ESAs for commercial property transactions in South Carolina, North Carolina, and Georgia. Conducted work for NEPA HUD reviews in South Carolina.

Environmental Remediation
Various Counties in SC (2023-Present)
Performed 96-hour AFVR extraction events.

UST Well Monitoring Assessment and Sample Collection
Various counties in SC, NC, and GA (2023-present)
Performed UST Well Monitoring, groundwater sampling, and soil sampling for commercial, state, and federal mitigation in projects in South Carolina, North Carolina, and Georgia.

Jurisdictional Determination Requests
Various counties in South Carolina (2024)
Assisted in determining wetland areas across various counties in South Carolina.

Protected Species Assessments
Various counties in South Carolina and North Carolina
Assisted in conducting Protected Species Assessments for subject properties in South Carolina and North Carolina.

Thomas Wallace Behnke, P.G., CHMM

Senior Hydrogeologist

PROJECT ROLE
Asbestos/Lead Based Paint Services

LOCATION
Columbia, SC

EDUCATION
- BA, Geology, 1989, College of Charleston

YEARS OF EXPERIENCE
Joined S&ME in 2005 with 15 years of experience

REGISTRATIONS
- PG SC, 1995, #2014
- PG, NC, 1996, #1510

CERTIFICATIONS
- Certified Hazardous Materials Manager 2001 #10652
- SC Asbestos Management Planner 1995 MP-0004
- SC Asbestos Project Designer 1996 PD-00061

PROFESSIONAL MEMBERSHIPS
- Environmental Information Association – Past President
- Institute of Hazardous Materials Managers

Mr. Behnke is the Environmental Location Coordinator for S&ME's Columbia, South Carolina Office. He is a licensed geologist in South Carolina and North Carolina. He is skilled in the following disciplines: Phase I and Phase II environmental site assessments, Brownfields Assessment, soil and ground water sampling, subsurface investigations, corrective action plans development and implementation, assessment and remediation of solid hazardous waste sites, asbestos consulting and lead based paint services including building inspections, and asbestos and lead paint abatement project design, monitoring well installation and drilling oversight, indoor air quality/biological assessments in public buildings, supervision of mold remediation projects in commercial buildings.

Key Projects and Assignments

SC Army National Guard – Seven Facilities
Midlands, Low Country, Upstate, and Pee Dee Region, SC | 2021

Sr. Project Manager for Hazardous Materials surveys on seven SCANG facilities located throughout South Carolina. Services included a review of client provided asbestos and lead based paint reports, a visual assessment of the facilities and preparation of asbestos and lead paint update reports including recommendations.

SC Department of Mental Health Bull Street Campus
Columbia, South Carolina | 2008-Ongoing

Senior Project Manager for environmental investigation of the South Carolina Department of Mental Health Bull Street campus under the South Carolina Department of Health and Environmental Control's (SCDHEC) Brownfields Program. Work included Phase I Environmental Site Assessment on 150-year-old mental health campus in downtown Columbia. Site consisted of 182 acres of property with 52 buildings ranging from 150 to 20 years in age. Follow up Remedial Investigation of 25 areas of concern including subsurface soil and groundwater sampling and removal and assessment of 12 USTs. Work included performing asbestos surveys on 52 campus buildings totaling over 1 million square feet of building space in accordance with SCDHEC regulations.

Carolina Crossroads Hazardous Materials Assessments
Columbia, South Carolina | 2018

Project Manager for hazardous materials assessments (Asbestos & Lead Based Paint) for multiple bridge and highway overpass structures along the I-26 – I-20 interchange corridor in Columbia. Project included development of site-specific safety procedures in connection with asbestos and lead-based paint sampling in active interstate conditions. Project was safely executed on time and in budget.

**Experience with previous employer.*

PHASE II NARRATIVE OF HOW REC(S) WILL BE MITIGATED USING RECOGNIZED METHODS AND ESTIMATED COSTS

May 12, 2026

NHE
325 Rocky Slope Road, Suite 301
Greenville, South Carolina 20607

Attention: Mr. Joseph Kass, NHE Development Manager
jkass@nhe-inc.com

Reference: **Plan of Action for Phase II Environmental Site Assessment**
Green Heron Road Site
Greenville, Greenville County, South Carolina
S&ME Project No. 26610087

Dear Mr. Kass:

S&ME, Inc. (S&ME) will be conducting a Phase II Environmental Site Assessment (ESA) on the Green Heron Road Site in Greenville, South Carolina. S&ME previously performed a Phase I ESA on the referenced site and presented our findings in our report dated May 4, 2026. From our Phase I ESA report, we identified the following recognized environmental condition (REC) and vapor encroachment condition (VEC):

- The northern adjoining Nutra Manufacturing LLC / General Nutrition Inc. facility has documented groundwater, surface water, and indoor air concentrations of the volatile organic compound (VOC) tetrachloroethene (or perchloroethylene or PCE) and daughter products. While the Nutra site has had ongoing monitoring for groundwater and surface water beginning in 2008, the site has also undergone vapor extraction since 2016. While the vapor extraction process is helping to remove secondary source contaminants from under the building, our concern is historic releases of VOCs that may have potentially migrated from the site beneath the subject property.

From the information obtained during S&ME's Phase I ESA and the referenced contact between you and Chris Daves, we have developed the following scope of services to assess the REC and VEC.

Scope of Services

S&ME proposes the following scope of work to complete the Phase II ESA:

- We will notify SC811 to mark underground utilities that service the subject property.
- We will also retain the services of a private utility subcontractor to locate underground utilities near the proposed assessment locations.

Soil Gas Collection and Analysis

- Collect seven subgrade soil gas samples near the northern property boundary (see attached Figure 1).

- The soil gas samples will be collected from hand auger borings in which a soil gas sampling probe is installed. The annular space around the probe will be filled with medium grain sand and isolated from the ground surface with hydrated bentonite pellets.
- Polyethylene tubing will be attached to the soil gas sampling probes and to a regulator connected to a six-liter Summa® canister. Each regulator will be opened, and the canister will be allowed to fill for approximately 30 minutes. Following soil gas collection, the sampling probes will be removed, and the holes will be filled with bentonite.
- The filled canisters will be relinquished to a South Carolina certified laboratory where the soil gas samples will be analyzed for VOCs by Method TO-15.
- Upon our receipt of the laboratory report, the soil gas laboratory results will be input into the EPA Vapor Intrusion Screening Level (VISL) calculator to predict an indoor air concentration based on the soil gas results. The predicted indoor air concentrations will be compared to regional screening levels (RSLs) also published by the EPA for both residential and commercial scenarios.
- We will prepare and submit a report of our methods and findings. The report will be submitted in pdf format and supplemented with tables, figures, and appendices, as appropriate.

The soil gas sampling will help evaluate the potential for VOCs to have migrated beneath Green Heron Road and the subject property. The results of the VISL calculator will assist in evaluating the need for vapor mitigation should the subject property be developed with buildings. Vapor mitigation typically involves installation of a vapor barrier under one or more buildings that would help restrict VOCs from impacting indoor air.

Closing Remarks

We appreciate the opportunity to provide our services to you on this project. Please contact us if you have any questions regarding this letter or if we can be of further assistance.

Sincerely,

S&ME, Inc.

Attention: Mr. Joseph Kass, NHE Development Manager
jkass@nhe-inc.com

Reference: **Proposal for Phase II Environmental Site Assessment**
Green Heron Road Site
Greenville, Greenville County, South Carolina
S&ME Proposal No. 26610087A

Dear Mr. Kass:

S&ME, Inc. (S&ME) appreciates the opportunity to provide this proposal to provide professional consulting services at the referenced project site. Our services will include a Phase II Environmental Site Assessment (ESA). This proposal provides our understanding of the project and outlines our proposed scope of services, schedules, and fees. Our Agreement for Services (AS-071) is attached and is incorporated as part of our proposal by reference.

♦ Project Information

We have prepared our proposal based on contact during the first week of May 2026 between yourself and our Chris Daves in our Columbia, South Carolina office. S&ME performed a Phase I Environmental Site Assessment (ESA) on the referenced site and presented our findings in our report dated May 4, 2026. From our Phase I ESA report, we identified the following recognized environmental condition (REC) and vapor encroachment condition (VEC):

- The northern adjoining Nutra Manufacturing LLC / General Nutrition Inc. facility has documented groundwater, surface water, and indoor air concentrations of the volatile organic compound (VOC) tetrachloroethene (or perchloroethylene or PCE) and daughter products. While the Nutra site has had ongoing monitoring for groundwater and surface water beginning in 2008, the site has also undergone vapor extraction since 2016. While the vapor extraction process is helping to remove secondary source contaminants from under the building, our concern is historic releases of VOCs that may have potentially migrated from the site beneath the subject property.

From the information obtained during S&ME's Phase I ESA and the referenced contact between you and Chris Daves, we have developed the following scope of services to assess the REC and VEC.

♦ Scope of Services

S&ME proposes the following scope of work to complete the Phase II ESA:

- We will notify SC811 to mark underground utilities that service the site.
- We will also retain the services of a private utility subcontractor to locate underground utilities near the proposed assessment locations.

Soil Gas Collection & Analysis

- Collect seven subgrade soil gas samples near the northern property boundary (see Figure 1 for approximate locations).
- The soil gas samples will be collected from hand auger borings in which a soil gas sampling probe is installed. The annular space around the probe will be filled with medium grain sand and isolated from the ground surface with hydrated bentonite pellets.
- Polyethylene tubing will be attached to the soil gas sampling probes and to a regulator connected to a six-liter Summa® canister. Each regulator will be opened and the canister will be allowed to fill for approximately 30 minutes. Following soil gas collection, the sampling probes will be removed and the holes will be filled with bentonite.
- The filled canisters will be relinquished to a South Carolina certified laboratory where the soil gas samples will be analyzed for VOCs by Method TO-15.
- Upon our receipt of the laboratory report, the soil gas laboratory results will be input into the EPA Vapor Intrusion Screening Level (VISL) calculator to predict an indoor air concentration based on the soil gas results. The predicted indoor air concentrations will be compared to regional screening levels (RSLs) also published by the EPA for both residential and commercial scenarios.
- We will prepare and submit a report of our methods and findings. The report will be submitted in pdf format and supplemented with tables, figures, and appendices, as appropriate.

The soil gas sampling will help evaluate the potential for VOCs to have migrated beneath Green Heron Road and the subject property.

♦ Limitations and Exceptions

This Proposal is solely intended for the Basic Services as described in the Scope of Services. The Scope of Services may not be modified or amended, unless the changes are first agreed to in writing by NHE.

♦ Client Responsibilities

The Scope of Services, project schedule, and associated fee presented herein are contingent upon the client fulfilling the following responsibilities:

1. Review and sign the Agreement for Services (attached Form AS-071) or otherwise formally accept this proposal.

2. Provide access to the property and permission to advance the hand auger borings and collect the soil gas samples.

♦ Schedule and Fee

We will complete the scope of services described above within three to four weeks from formal acceptance of this proposal for a **lump sum fee** of **$8,400**.

♦ Authorization

Our Agreement for Services, Form Number AS-071, is attached and is incorporated as a part of this proposal. Please indicate your acceptance of our proposal by signing and returning the agreement to our office. If you elect to accept our proposal by issuing a purchase order, then please specifically reference this proposal and an authorization to proceed with the performance of our services. If this proposal is transmitted to you via email, and if you choose to accept this proposal by email, your reply email acceptance will serve as your representation to S&ME that you have reviewed the proposal and the associated Agreement for Services (AS-071) and hereby accept both as written.

♦ Closing Remarks

S&ME appreciates the opportunity to submit this proposal for your review and consideration. Please contact us if you have any questions regarding the information in this proposal or if we can be of further assistance.

Sincerely,

S&ME, Inc.

PROJECT

Project Name: Green Heron Road Site - Phase II Environmental Site Assessment

Project location: (Street Address) Green Heron Road

City: Greenville State: South Carolina Zip: 29607

SERVICES TO BE RENDERED

Proposal Number: 26610087A dated: May 8, 2026 is incorporated into this Agreement For Services and this Agreement For Services is incorporated into this Proposal.

Client desires to contract with Consultant for the Services to be Rendered ("Services") on Client's Project, as contained in Consultant's Proposal. The Proposal and Client's Project are referenced immediately above.

THEREFORE, in consideration of the Mutual Covenants and Promises included herein, Client and Consultant agree as follows:

1. **ACCEPTANCE**: Client hereby accepts this offer by Consultant to provide the Services as contained in Consultant's Proposal and agrees that such Services and any additional Services performed by Consultant shall be governed by this Agreement. If Client directs that Services commence prior to execution of this Agreement, Client agrees that commencement of Services by Consultant is acceptance of the terms of this Agreement. **CLIENT MAY ACCEPT THIS AGREEMENT FOR SERVICES THROUGH THE USE OF CLIENT'S PURCHASE ORDER, HOWEVER ALL PREPRINTED TERMS AND CONDITIONS ON CLIENT'S PURCHASE ORDER ARE INAPPLICABLE, ARE EXPRESSLY REJECTED, AND THE TERMS OF THIS AGREEMENT SHALL GOVERN.** Unless this offer is previously accepted, it will be withdrawn automatically at 5:00 pm EST, thirty (30) days from the date of issue.

2. **CONTRACT DOCUMENTS**: "Contract Documents" shall mean this Agreement for Services the Proposal identified under "SERVICES TO BE RENDERED," and all mutually executed Change Orders. This Agreement for Services along with the Contract Documents represent the entire understanding and agreement between the parties relating to the Services and supersedes any and all prior negotiations, discussions, and agreements, whether written or oral, between the parties regarding same. Any terms and conditions which Client is obligated to perform or satisfy, whether by law or contract, or proposed in any acknowledgments or acceptance by Client which are in addition to, or different from, this Agreement for Services along with the Contract Documents are hereby expressly rejected and shall not become part of the agreement between the

parties without Consultant's specific written consent. Any acceptance by Client is limited to acceptance of the express terms set forth in this Agreement for Services.

3. **SCOPE OF SERVICES**: Unless otherwise stated in writing, Client assumes sole responsibility for determining whether the quantity and the nature of the services included in Consultant's proposal received by Client are adequate and sufficient for Client's intended purpose. Client shall communicate the provisions of this Agreement for Services to each and every third party to whom Client transmits any part of Consultant's work. Consultant shall have no duty or obligation to any third party except as specifically set forth in Consultant's proposal.

   Consultant has provided Client with the Proposal identified under "Services to be Rendered." By signing below, Client agrees that Client or the Client's representative has examined Consultant's proposal, which includes a scope of work to be performed by Consultant, an opinion on the cost to perform Consultant's scope of work, and an opinion on the amount of time required to perform Consultant's scope of work along with any other documents, opinions, or advice prepared or provided by Consultant and Client agrees that Client is fully satisfied with Consultant's Proposal and Client obtained the advice of any other consultant(s) as the Client deems necessary to protect the Client's interests. Client also agrees by signing below it is responsible for requesting additional services not included in Consultant's proposal and if necessary, Client agrees it is responsible (even if delegated to a third party) for notifying and scheduling Consultant so Consultant can perform the Services. Consultant shall not be responsible for damages caused by services not performed due to any failure to request or schedule Consultant's Services. If project conditions change materially from those described to Consultant at the time of proposal, Consultant is entitled to a change order equitably adjusting its Services and fee.

   Consultant shall not supervise, direct or have control over the Client's work nor have any responsibility for the construction means, methods, techniques, sequences or procedures selected by the Client's contractor and/or agents. These rights and responsibilities are solely those of the contractor or agent in accordance with its agreement with Client. Only Client has the right to reject or stop work of its contractor or agents. Consultant's presence on site does not in any way guarantee the completion, quality or performance of the work by any other party retained by Client. Consultant does not guarantee the performance of any contractor or agent of Client and shall not be responsible for such party's failure to perform its work in accordance with any applicable documents, including but not limited to, the plans and specifications or any applicable laws, codes, rules or regulations.

   Any evaluations of the Client's budget for the project, and any preliminary or updated estimates of the cost of the work prepared by Consultant represent Consultant's judgment as a design professional familiar with the construction industry. It is recognized, however, that neither Consultant nor Client has control over the cost of the labor, materials or equipment, over the contractor's methods of determining bid prices, or over competitive bidding, market or negotiating conditions. Accordingly, Consultant does not warrant or represent that bids or negotiated prices will not vary from Client's budget for the project, or from any estimate of the cost of the work evaluation prepared or agreed to by Consultant.

4. **CHANGE ORDERS**: Client may request changes to the scope of Services by altering or adding to the Services to be performed. If Client so requests, Consultant will provide a change order proposal including Client's requested changes to the scope of Services for Client's review and approval. Following Client's approval, Client shall provide written acceptance and such Change Order Proposal shall become part of the Contract Documents and shall supersede any prior conflicting terms. If Client does not follow these procedures, but instead directs Consultant to perform changed or additional work without an executed change order, (1) the Services are changed according to Consultant's understanding of Client's direction; and (2) and Consultant will be paid for this work according to the current fee schedule plus fifteen percent (15%).

5. **PAYMENT**: Client will pay Consultant for Services and expenses in accordance with the Contract Documents. If prices for Services are not specified in the Contract Documents, Consultant's current fee schedule in effect for the type of services performed shall control. Unless otherwise agreed prior to the start of the Services, Consultant will submit invoices to Client monthly and a final invoice upon completion of Services. Payment is due upon receipt of the invoice unless otherwise agreed to in writing prior to the submittal of the invoice.

Invoices are past due 30 calendar days after the date of the invoice. Past due amounts are subject to a late fee of one and one-half percent per month (18 percent per annum) or the highest amount allowed by applicable law on the outstanding balance, whichever is less. Attorney's fees and other costs incurred in collecting past due amounts shall be paid by Client. The Client's obligation to pay under this Agreement is in no way dependent upon the Client's ability to obtain financing, payment from third parties, approval of governmental or regulatory agencies, or Client's successful completion of the Project. In addition, CONSULTANT reserves the right to suspend the performance of all services in any case where invoices remain unpaid more than sixty (60) days from the invoice date.

To verify the CLIENT's requirements for appropriate invoicing, the following information is requested.

CLIENT Accounts Payable contact name:
CLIENT Accounts Payable contact phone number:
CLIENT Accounts Payable email address:

Upon execution of this document, CONSULTANT will reach out to the contact provided to gather CLIENT's required information such as purchase order number, client project number, email address or website for invoice submission, monthly deadline for invoice submission, CLIENT legal entity name for invoicing, CLIENT address for invoicing, etc.

6. **STANDARD OF CARE**: Consultant and its agents, employees and subcontractors shall endeavor to perform the Services for Client with that degree of care and skill ordinarily exercised, under similar circumstances, by consultants practicing in the same discipline at the same time and location. In the event any portion of the Services fails to substantially comply with this standard of care obligation and Consultant is promptly notified in writing prior to one year after completion of such portion of the Services, Consultant will re-perform such portion of the Services, or if re-performance is impractical, Consultant will refund the amount of compensation paid to Consultant for such portion of the Services. **NOTWITHSTANDING ANY TERMS IN OR APPLICABLE TO THIS AGREEMENT, CONSULTANT MAKES NO WARRANTIES OR GUARANTEES, EXPRESS OR IMPLIED, RELATING TO CONSULTANT'S SERVICES OR WORK PRODUCT, AND CONSULTANT DISCLAIMS ANY IMPLIED WARRANTIES OR WARRANTIES IMPOSED BY LAW, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE**.

7. **LIMITATION OF LIABILITY**: Client and Consultant have evaluated the risks and rewards associated with this project, including Consultant's fee relative to the risks assumed, and agree to allocate certain of the associated risks. To the fullest extent permitted by law, Consultant's aggregate liability to Client, including that of Consultant's officers, directors, employees and agents, is cumulatively limited to $100,000, hereinafter referred to as LIMITATION OF LIABILITY. This LIMITATION OF LIABILITY applies to all lawsuits, claims or actions, whether identified as arising in tort, INCLUDING NEGLIGENCE (WHETHER SOLE OR CONCURRENT), PROFESSIONAL ERROR OR OMISSIONS, BREACH OF WARRANTY (EXPRESS OR IMPLIED), NEGLIGENT MISREPRESENTATION, AND STRICT LIABILITY, contract, or other legal theory, including without limitation, Consultant's indemnity obligations to Client related to the Services provided in this Agreement and any continuation or extension of Consultant's Services.

   By entering into this Agreement, Client acknowledges that this LIMITATION OF LIABILITY provision has been reviewed, understood and is a material part of this Agreement, and that Client has had an opportunity to seek legal advice regarding this provision.

8. **NO CONSEQUENTIAL DAMAGES**: In no event shall Consultant or Client be liable to the other for any special, indirect, incidental or consequential loss or damages, including, but not limited to, lost profits, damages for delay, or loss of use arising from or related to Services provided by Consultant.

9. **INSTRUMENTS OF SERVICE**: In connection with the performance of the Services, Consultant may deliver to Client reports, drawings, specifications, computer files, field data, notes, and other documents and instruments prepared by the Consultant reflecting Services provided and the results of such Services ("Instruments of

Service"). Statements made in Consultant's Instruments of Service are opinions based upon engineering judgment and are not to be construed as representations of fact. All Instruments of Service, other written documents, all original data gathered by Consultant and work papers produced by Consultant in the performance of or intrinsic to the Services included in the Services are, and shall remain, the sole and exclusive property of Consultant. Files shall be maintained in general accordance with Consultant's document retention policies and practices. Client shall indemnify, defend, and hold Consultant harmless from any and all claims, damages, or losses arising from any unauthorized reuse or modification of the Instruments of Service.

10. **SAFETY**: Consultant has no authority and no responsibility for general job safety and for the safety of persons who are not employed by Consultant. Should Client, or third parties, be conducting activities on the Site, then each shall have responsibility for their own safety and compliance with applicable safety requirements.

11. **SAMPLES**: Samples are consumed in testing or disposed of upon completion of tests (unless stated otherwise in the Services).

12. **HAZARDOUS MATERIALS**: Nothing contained within this agreement shall be construed or interpreted as requiring Consultant to assume the status of an owner, operator, generator, storer, transporter, treater or disposal facility as those terms appear within RCRA or within any Federal or State statute or regulation governing the generation, transportation, treatment, storage and disposal of pollutants. Client retains full responsibility for compliance with the provisions of RCRA and any other Federal or State statute or regulation governing the handling, treatment, storage and disposal of pollutants.

13. **CLIENT OBLIGATIONS**:

    (a) Client warrants that all information provided to Consultant regarding the Project and Project location are complete and accurate to the best of Client's knowledge.

    (b) Client agrees to furnish (or obtain from the Owner should the Client not be the Owner) Consultant, its agents, employees, and subcontractors a right-of-entry and any authorizations needed for Consultant to enter onto the project site to perform the Services included in this Agreement.

    (c) Client recognizes that the performance of the Services included in this Agreement may cause alteration or damage to the Site. Client acknowledges that some site disturbance is inherent in the work for which Consultant will not be responsible. Should Client not be owner of the property, then Client agrees to notify the owner of the aforementioned possibility of unavoidable alteration and damage and Client shall arrange for the repair of any alteration and damage.

    (d) Client agrees to disclose the identity of all utilities serving the Project Site, the presence and accurate location of hidden or obscured man-made objects known to Client that may be in Consultant's work area and the nature and location of any known or suspected hazardous materials that may exist on the property.

    (e) The Client shall furnish, at the Client's expense, all information, requirements, reports, data, surveys and instructions required by this Agreement. The Consultant may use such information, requirements, reports, data, surveys and instructions in performing its services and is entitled to rely upon the accuracy and completeness thereof.

    (f) In order to make informed decisions based on the Instruments of Service, Client's review and study of the Instruments of Service is vital to take full advantage of the consulting process. Client shall review in detail all Instruments of Service, including attachments and references therein, and in the event of questions or concerns, shall contact the project manager. Consultant provides information in the Instruments of Service which assists the Client and/or user in understanding and using the deliverable. The information includes direction on the extent to which the information can be relied on and applied to Client's decision-making process.

    (g) Provide prompt written notice to CONSULTANT if CLIENT becomes aware of any fault or problem in the PROJECT, including any errors or omissions in CONSULTANT'S work.

(h) Client is responsible for reporting any releases of hazardous substances to appropriate government agencies as required by law. Client acknowledges that Consultant also may have reporting obligations under controlling law and regulations. Client waives any claim against Consultant and will indemnify and hold Consultant harmless from any claim, injury or loss arising from the discovery of unforeseen hazardous substances.

14. **CERTIFICATIONS**: Client understands and agrees that Consultant's Instruments of Services are limited to an expression of professional opinion based upon the Services performed by the Consultant and does not constitute a warranty or guarantee, either express or implied. In addition, Client agrees that Consultant will not be required to execute any document that would result in certifying, guaranteeing or warranting the existence of conditions whose existence the Consultant cannot reasonably ascertain.

15. **FAILURE TO FOLLOW RECOMMENDATIONS**: The Client agrees that it would be unfair to hold the Consultant liable for problems that may occur if the Consultant's recommendations are not followed. Accordingly, the Client waives any claim against the Consultant, and agrees to indemnify, and hold harmless the Consultant from any claim or liability for injury or loss that results from failure to implement the Consultant's recommendations or from implementation of the Consultant's recommendations in a manner that is not in strict accordance with them.

16. **TERMINATION**:

For Convenience - Upon written notice, Client or Consultant may terminate the performance of any further Services included in this Agreement if the terminating party determines termination is in the terminating party's interest. Upon receipt of a termination notice by either party, Consultant shall stop work on all Services included in this Agreement and deliver any Instruments of Service complete at that time to Client and Client shall pay Consultant within thirty (30) days for all Services performed up to the dispatch or receipt of the termination notice. Upon Termination for Convenience, Consultant and Client shall have no further rights or remedies other than those included in this paragraph.

For Cause –In the event of material breach of this Agreement, the party not breaching the Agreement may terminate it upon five (5) business days written notice delivered or mailed to the other party, which notice must identify the material breach. The Agreement may not be terminated for cause if the breaching party cures the breach within five (5) business days of receipt of the written notice. Upon Termination for Cause, Consultant shall stop work on all Services included in this Agreement and deliver any instruments of service complete at that time to Client and Client shall pay Consultant within thirty (30) days for all Services performed up to the termination. Upon Termination for Cause, Consultant and Client shall have no further rights or remedies other than those included in this paragraph.

17. **UNFORESEEN CONDITIONS OR OCCURRENCES**: If, during the performance of Services ,any unforeseen hazardous substance, material, element or constituent or other unforeseen or changed conditions or occurrences are encountered which, in Consultant's judgment, significantly affects or may affect the Services, the risk involved in providing the Services, or the recommended Scope of Services, Consultant will promptly notify Client. Subsequent to that notification, Consultant may: (a) If practicable, in Consultant's judgment and with approval of Client, complete the original Scope of Services in accordance with the procedures originally intended in the Proposal; (b) Agree with Client to modify the Scope of Services and the estimate of charges to include the previously unforeseen conditions or occurrences, such revision to be in writing and signed by the parties and incorporated into this Agreement; or (c) Terminate the Services effective on the date of notification pursuant to the terms of TERMINATION FOR CONVENIENCE.

18. **FORCE MAJEURE**: Consultant shall not be deemed to be in default of this Agreement to the extent that any delay or failure in the performance of the Scope of Work results from any causes beyond its reasonable control. For this purpose, such acts or events shall include, but are not limited to, storms, floods, unusually severe weather, epidemics, pandemics, quarantines, acts of government, civil disturbances, war, riot, strikes, lockouts or other industrial disturbances, and the inability within reasonable diligence to supply personnel, equipment, information or material to the Project. In the event that such acts or events occur, it is agreed that Consultant shall attempt to resume performance of the Services covered by this Agreement as soon as

reasonably possible. If the force majeure event adversely affects the scope or schedule, Client agrees to modify the Scope of Services and the estimate of charges, such revision to be in writing and signed by the parties and incorporated into this Agreement.

19. **INSURANCE**: Consultant shall maintain at its own expense, during the term of this Agreement, the following insurance: (1) Workers' Compensation providing statutory coverages required by the state where services are provided, (2) Employer's Liability with limits of $1,000,000 each accident, (3) Commercial General Liability with limits of $1,000,000 each occurrence / $2,000,000 aggregate, (4) Commercial Automobile with limits of $1,000,000 each accident, (5) Umbrella Excess Liability with limits of $5,000,000 each occurrence and (6) Professional Liability with limits of $1,000,000 each claim.

20. **INDEMNITY**: Consultant shall indemnify Client from and against damages, losses and judgments arising from claims by third parties, including reasonable attorneys' fees and expenses recoverable under applicable law, but only to the extent caused by the negligent acts, errors, or omissions of Consultant in the performance of services under this Agreement. Notwithstanding any terms in or applicable to this Agreement, it is understood and agreed that Consultant shall have no affirmative defense obligations.

21. **DISPUTE RESOLUTION**: In the event of a dispute between Consultant and Client with regard to any matter arising out of or related to this Agreement, the Parties will use their best efforts to resolve the dispute amicably using negotiation and mediation within fifteen (15) calendar days. If the dispute cannot be settled amicably, the Parties agree that the dispute shall be resolved by litigation in a court of competent jurisdiction within the State where project is located.

22. **ASSIGNMENT**: Neither party may assign this Agreement, in whole or in part, without the prior written consent of the other party.

23. **NO WAIVER**: No waiver by either party of any default by the other party in the performance of any provision of this Agreement shall operate as or be construed as a waiver of any future default, whether like or different in character.

24. **MISCELLANEOUS**: The validity, interpretation, and performance of this Agreement shall be governed by and construed in accordance with the laws of the state where project is located without regard to choice of law provisions. This Agreement represents the entire understanding and agreement between the parties hereto relating to the Services and supersedes any and all prior negotiations, discussions, and Agreements, whether written or oral, between the parties regarding same. No amendment or modification to this Agreement or any waiver of any provisions hereof shall be effective unless in writing, signed by both Parties. If any part of this Agreement is found to be unenforceable, then the parties' intent is to have such part rewritten to attain as close as possible the original intent of the unenforceable provision, and all remaining provisions shall continue in full force and effect.

25. **TIME BAR**: Notwithstanding any applicable state statute of repose or statute of limitation, the Parties agree that all legal actions by either party against the other concerning this Agreement or the work performed in relation to this Agreement, will become barred two (2) years from the time the party knew or should have known of the claim, or two (2) years after completion of Consultant's Services, whichever occurs earlier.

26. **NO DISCRIMINATION**: To the extent applicable, this contractor and subcontractor shall abide by the requirements of 41 CFR §§ 60-1.4(a), 60-300.5(a) and 60-741.5(a) and the posting requirement under 29 CFR Part 471, appendix A to subpart A. These regulations prohibit discrimination against qualified individuals based on their status as protected veterans or individuals with disabilities, and prohibit discrimination against all individuals based on their race, color, religion, sex, sexual orientation, gender identity or national origin. Moreover, these regulations require that covered prime contractors and subcontractors take affirmative action to employ and advance in employment individuals without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, protected veteran status or disability.

27. **NO THIRD PARTY LIABILITY**: Nothing in this Agreement or as a consequence of any of the Services provided gives any rights or benefits to anyone other than Client and Consultant. All duties and responsibilities

undertaken pursuant to this Agreement are for the sole and exclusive benefit of Client and Consultant and not for the benefit of any other party. No third party shall have the right to rely on the Instruments of Service without Consultant's prior written consent and the third party's agreement to be bound to the same terms and conditions as the Client.

28. **INDIVIDUAL LIABILITY**: CLIENT AGREES THAT CONSULTANT'S SERVICES WILL NOT SUBJECT CONSULTANT'S INDIVIDUAL EMPLOYEES, OFFICERS OR DIRECTORS TO ANY PERSONAL LIABILITY, AND THAT NOTWITHSTANDING ANY OTHER PROVISION OF THIS AGREEMENT, CLIENT AGREES THAT ITS SOLE AND EXCLUSIVE REMEDY SHALL BE TO DIRECT OR ASSERT ANY CLAIM, DEMAND, OR SUIT ONLY AGAINST CONSULTANT.

CONSULTANT HEREBY ADVISES CLIENT THAT ITS PERFORMANCE OF THIS AGREEMENT IS EXPRESSLY CONDITIONED ON CLIENT'S ASSENT TO THE TERMS AND CONDITIONS DETAILED HEREIN.

IN WITNESS WHEREOF, the Parties have caused this Agreement to be executed by their duly authorized representative.
