RE: Phase I Environmental Assessment
Mill House
500 Glenn Street
Anderson, Anderson County, South Carolina
Project No. PRWCK-26-SC-10310-01

Dear Mr. Sullivan:

United Consulting is pleased to submit this report of our Phase I Environmental Assessment for the above-referenced project. For property transaction purposes, if applicable, the Viability Date of this report is included in the table below:

Table of Critical Dates

Research/Assessment Component	Date
Date of Regulatory Database Report	April 1, 2026
Date of Recorded Title/Environmental Lien Search	N/A
Earliest Date of Interviews (Owner, Government, etc.)	April 8, 2026
Date of Site and Area Reconnaissance	March 30, 2026
Report Issuance Date (Declaration by Environmental Professional)	May 14, 2026
Report Viability Date	**September 28, 2026**

We appreciate the opportunity to assist you with this project and look forward to working with you again. Please contact us if you have any questions or if we can be of further assistance.

Sincerely,

UNITED CONSULTING

Timothy J. Beck, P.G. (GA)
Executive Vice President

Jenna Forte
Project Environmental Specialist

1.0 EXECUTIVE SUMMARY [1]

United Consulting has completed a Phase I Environmental Assessment on the proposed **Mill House** property located between the intersections of York Street and West Whitner Street, and Appleton Street and West Whitner Street, and extending north along Glenn Street to the intersection of Glenn Street and North I Street in Anderson, Anderson County, South Carolina. This property is hereafter referred to in this report as the Subject Property. The results from this investigation are briefly summarized below. The text of the report should be reviewed for a discussion of these items.

1. The Subject Property consisted of 34.59 acres containing foundations of a former textile mill. The southern portion of the Subject Property was wooded and contained a pond and two stream channels. Historically, the northern portion of the Subject Property was developed with a textile mill since sometime before 1918 until sometime in the 2000s when the remaining mill buildings were demolished following a structure fire in 2001. At the time of the site reconnaissance, the Subject Property was undeveloped and contained remnants of the former textile mill operations. Solid household waste, construction debris, and used tires were observed throughout the central and northern portion of the Subject Property. **In United Consulting's opinion, the lengthy history of operations and observations/conditions during the site reconnaissance represents a recognized environmental condition (REC) to the Subject Property.**

2. The Subject Property was identified on the State Hazardous Waste Site (SHWS), Voluntary Cleanup Site (VCP), South Carolina Brownfields, and the Resource Conservation and Recovery Act Non-Generator (RCRA Non-Gen) databases due to former textile mill operations. Textile mill operations reportedly began in 1902 and ceased in 1985, and the remaining structures reportedly burned in 2001 and were demolished following the fire. Textile mills, such as this, typically utilize per- and poly fluoroalkyl (PFAS), dyes containing heavy metals, and petroleum products in the manufacturing of textiles. A Freedom of Information Act request was submitted for regulatory database files associated with the Subject Property. According to the files reviewed, soil and groundwater at the Subject Property have not been analyzed for possible contamination from the former textile mill operations. **Based on the lengthy textile mill operations, and lack of soil and groundwater analytical data at the Subject Property, it is United Consulting's opinion that this facility does represent a REC to the Subject Property.**

3. The southwestern adjoining Gerald's Radiator was listed on the Leaking Underground Storage Tank (LUST) database due to a release reported in December 1991. According to regulatory files reviewed, groundwater was collected from a monitoring well, located approximately 100 feet southwest of the Subject Property, and analyzed for benzene, toluene, ethyl-benzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), and naphthalene. Laboratory results indicated that BTEX, MTBE, and naphthalene were below laboratory detection limits. Based on the file review documents, and apparent down-gradient hydraulic relationship to the Subject Property, it is United Consulting's opinion that this facility **does not** represent a REC to the Subject Property.

4. The Vapor Encroachment Screening included a Tier 1 screening. Based on the results of the screening, a VEC does exist at the Subject Property.

1 This Executive Summary is not intended to be used or relied upon without reference to the entire report and cannot otherwise be properly understood and interpreted. It is provided solely for the convenience of the Client and not as a substitute for the report or review of the report.

5. United Consulting identified an apparent perennial stream channel, intermittent stream channel, and multiple wetland areas which we believe would currently be regulated as federal jurisdictional Waters of the United States (WOTUS) by the United States Army Corps of Engineers (USACE) under Section 404 of the Clean Water Act. Under the current WOTUS rule, in our opinion, the identified wetland would be considered jurisdictional WOTUS.

6. This assessment has revealed no Historical RECs, Controlled RECs, or significant data gaps in connection with the Subject Property.

7. This assessment has identified the former textile mill operations on the Subject Property as a REC due to the duration of operations and likely presence of contaminants related to textile mill operations on the Subject Property.

8. United Consulting recommends conducting a Phase II Environmental Assessment to assess whether the on-site REC has impacted (i.e., contaminated) the Subject Property.

9. **If the Phase II ESA finds evidence that the Subject Property has been impacted, U**nited Consulting recommends re-enrolling the Subject Property into the South Carolina Brownfields Program in order to address the possible soil/groundwater contamination related to the former textile mill operations in the area of the on-site structure remnants.

2.0 INTRODUCTION

2.1 Contractual Details

2.1.1 Purpose

United Consulting was retained by **Prestwick Development** to perform a Phase I Environmental Assessment of the Subject Property. The purpose of this assessment was to determine whether there are recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs), in connection to the Subject Property. The protocol used for this assessment is in substantial conformance with the American Society for Testing and Materials (ASTM) Practice E 1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the All-Appropriate Inquiry (AAI) Rules, 40 CFR § 312[2].

Recognized environmental conditions (RECs) is a term defined by ASTM as: 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release; or 3) under conditions that pose a material threat of a future release to the environment.

RECs do not include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject to an enforcement action if brought to the attention of government agencies. RECs do not include agricultural land use, railroad corridors, or other land uses in which fertilizers, pesticides, and/or other herbicides are applied in accordance with standard application procedures. RECs also do not include items such as asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality and high voltage powerlines. United Consulting can assist you with these non-scope items if needed.

Historical recognized environmental condition (HREC) is a term defined by ASTM as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority without subjecting the subject property to any controls (for example, activity and use limitations, or other property use limitations). A HREC is not a REC.

Controlled recognized environmental condition (CREC), is a term defined by ASTM as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority, or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations, or other property use limitations). A CREC is also a REC.

2 Title 40 of the Code of Federal Regulations, Part 312 (40 CFR § 312), Standards and Practices for All Appropriate Inquiries, Effective November 1, 2006, as published in the Federal Register: updated December 15, 2022 (Volume 87, Number 240), pages 76578-76581.

The Practice E 1527-21 and the AAI Rule were developed to satisfy one of the requirements to qualify for the innocent landowner's liability protection, the contiguous property owner protection, and/or the bona fide prospective purchaser protection provided for in the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002. The ASTM approach constitutes a limited, but commercially prudent and reasonable, inquiry. The E 1527-21 Standard has been prepared to meet the AAI requirements. This assessment was, therefore, performed to identify environmental concerns that may be discerned by visual observation and information-gathering procedures.

2.1.2 Scope

The scope of our services, which substantially follows ASTM Standard E 1527-21 and the AAI Rule, included the following items:

1. Research of readily available Federal and State environmental agency records for evidence of hazardous substance or related activities on or near the Subject Property. This included the: LUST, NPL, SEMS, Registered UST, RCRA-TSD, RCRA-Generators, ERNS, and other reasonably ascertainable files;

2. Research of reasonably available tribal records for the property and nearby properties;

3. Conduct regulatory file reviews for adjoining and nearby regulated facilities, as deemed necessary by the Environmental Professional;

4. Review of historical maps, city directories and aerial photographs to assess area history and past use of the Subject Property;

5. Reconnaissance of the Subject Property and surrounding area, with a focus on environmental issues;

6. Interviews with the current property owner, past property owners, local residents, government agencies, and firms adjoining to the Subject Property, as possible, to assess past use and present activities which may have impacted the Subject Property;

7. Assess for potential vapor intrusion risks, including a tier one screening per the ASTM Standard Guide for "Vapor Encroachment Screening on Property Involved in Real Estate Transactions," E2600-15;

8. Review of the chain of title, records of environmental liens, and records of institutional and engineering controls for the property, if provided by the client, as part of the all-appropriate inquiry.

9. Preparation of this report to document the results of the site reconnaissance, historical and regulatory research, and interviews, and to provide United Consulting's professional opinion of the environmental condition of the Subject Property.

2.1.3 Non-ASTM Standard E1527-21 Considerations

The following non-scope items were assessed at the request of the client and outlined in United Consulting's proposal dated March 17, 2026:

1. Research available soil surveys and wetland inventory maps to locate previously identified wetland areas, or potential wetlands and streams.

2. We will walk the drainages on the property to determine if the feature would be considered federal jurisdictional waters.

3. We will utilize our GPS equipment to map the start of the stream(s) and transitions from ephemeral stream to intermittent stream, as appropriate.

2.1.4 Significant Assumptions

This Assessment was based on the following significant assumptions in the preparation of this report:

- Site Use – This assessment was conducted with the understanding that the Client is considering purchasing the Subject Property;

- Groundwater Flow Direction – The direction of groundwater flow in the area of the property has been inferred based on the site observations of topographic slope, proximity of nearby water bodies, and review of USGS topographic maps;

- Regulatory Records Information – This assessment is based on information provided by EDR regarding the regulatory status of facilities within the minimum search distances, and that this data is complete, accurate, and current;

- Data Gaps – Only the identified significant data gaps affect the assessment.

- Other – This assessment is also based on all information provided through interviews of pertinent agencies, occupants, users, and persons familiar with the property being complete and unbiased.

These limitations are referred to in the ASTM Standard as assumptions. They form part of the basis for the assessment performed for this Subject Property. If any of these items are not accurate, United Consulting must be so informed so appropriate re-assessment can be performed.

2.1.5 Limitations

United Consulting has performed appropriate inquiry for this Phase I Environmental Assessment in general conformance with the scope and limitations of ASTM Practice E 1527-21 and 40 CFR § 312, the AAI Rule. In accordance with this practice, asbestos, mold, lead-based paint testing, radon, endangered species, and wetlands work are excluded from the standard scope of work for Phase I Environmental Assessments. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a site. United Consulting's assessment is based on a visual evaluation of the surficial conditions, and is a professional opinion, only. No other warranty or guarantee is expressed or implied. This report must be considered in its entirety.

United Consulting's conclusions, opinions and suggestions have been prepared using generally accepted standards prevailing within the relevant disciplines as practiced within the southeastern United States. Nothing contained within this report is intended to supersede or replace the judgment of the Client. All decisions relating to the aforementioned project or site are the sole responsibility of said user(s).

United Consulting's conclusions, opinions and suggestions are based upon information furnished including governmental records, as well as United Consulting's professional experience. This assessment may not detect or account for all conditions or factors present at a project area or Subject Property. Should such unexpected conditions or factors become manifest during subsequent activities at a site, it will be necessary for United Consulting to review and re-evaluate any and all conclusions, opinions and suggestions made with respect to this project or Subject Property. Accordingly, United Consulting should be contacted immediately in such a situation.

2.1.6 Special Terms and Conditions

The terms and conditions for this Phase I Environmental Assessment were set forth in United Consulting's proposal dated March 17, 2026, which was subsequently authorized by Mr. Scott Sullivan, a representative of Prestwick Development, on March 20, 2026. A condition of this agreement was that the client would be responsible for providing United Consulting with information regarding Chain-of-Title records, environmental liens, and Activity and Use Limitations.

2.1.7 User Reliance

This report is for the exclusive use of **South Carolina Department of Affordable Housing** and **Prestwick Development Company, LLC**, and may be used only in reference to the project described herein. United Consulting is not responsible for the conclusions, opinions, or recommendations of others, and shall not be liable for unauthorized use of this report.

The right to rely upon this report and the data herein may not be assigned without the express written permission of United Consulting. As a prerequisite for the granting of such permission, the third-party user(s) (including, but not limited to, the Client's successors and assigns) must agree to be bound by the terms and conditions of the original agreement between United Consulting and the Client. Further, reliance is dependent on similar uses of the property and the document.

2.2 Site Description

2.2.1 Location and Legal Description

The Subject Property consisted of 34.59 acres located between the intersections of York st and West Whitner Street, and Appleton Street and West Whitner Street; extending north along Glenn Street to the intersection of Glenn Street and North I Street in Anderson, Anderson County, South Carolina. The site is referenced by the Parcel ID 1231401001 and the street address 500 Glenn Street. United Consulting was provided with a preliminary site plan of the Subject Property. United Consulting utilized this preliminary site plan to determine the site boundaries during the site reconnaissance. The location of the Subject Property is illustrated on Figure 1, which is located in Appendix A. The client provided preliminary site plan is included in Appendix B. A legal description of the Subject Property was not provided.

Exhibit 1: Aerial Photograph of the Subject Property

2.2.2 Site and Vicinity General Characteristics

The Subject Property was vacant land which was previously developed with a textile mill. Foundations of the textile mill structures and one brick smokestack remained in the central and northern portions of the subject property. The southern portion of the Subject Property was wooded and contained a pond and stream channel.

2.2.3 Previous Environmental Assessments

A previous Phase I Environmental Assessment was conducted on the Subject Property, dated January 3, 2026, by Cushman Enterprises, LLC. This assessment indicated that several sheens and/or oil discolorations, opened five-gallon buckets containing petroleum/hazardous substances, three empty 55-gallon drums, and six abandoned ASTs with areas of stained soils, some with petroleum-based odors, were observed. Areas of bare and stained soil were observed throughout the northern and central portions of the Subject Property. Additionally, Cushman Enterprises observed possible asbestos and lead based paint containing materials within debris piles including insulation materials, roofing shingles, floor tiles, ceiling tiles, and painted steel, brick, and masonry materials. Cushman Enterprises identified potential sources for the improper use, treatment, storage, generation, or disposal of hazardous and petroleum substances typically used during mill operations.

3.0 USER PROVIDED INFORMATION

United Consulting provided Prestwick Development Company, LLC with a user questionnaire. Mr. Casey Craven, representative of Prestwick Development Company, LLC, completed the questionnaire on April 8, 2026. A summary of provided information is below:

3.1 Title Records

Mr. Craven stated in the provided User Questionnaire that chain-of-title information would be provided for the Subject Property. As of the issuance of this report, no title documentation has been provided to United Consulting. Should such information be received which alters United Consulting's opinion regarding environmental conditions at the Subject Property, an addendum will be issued.

3.2 Environmental Liens or Activity and Use Limitations

Mr. Craven stated that there are no environmental liens or activity and use limitations in connection with the Subject Property.

3.3 Specialized Knowledge of User

Mr. Craven indicated he had no specialized knowledge of environmental conditions at the Subject Property.

3.4 Commonly Known Information

Mr. Craven stated he was aware that the Subject Property was previously a mill. United Consulting also conducted interviews with available local people during the reconnaissance in an attempt to obtain commonly known information concerning the Subject Property. Details of the interviews performed are included in Section 6 of this report.

3.5 Valuation Reduction for Environmental Issues

Mr. Craven indicated that the purchase price of the Subject Property was within the fair market value of other non-contaminated property in the vicinity.

3.6 Owner, Property Manager, and Occupant Information

Mr. Craven indicated that the current owner of the Subject Property is Joseph Dabbah and provided United Consulting with contact information.

3.7 Reason for Performing Phase I

This Phase I Environmental Assessment was conducted with the understanding that the client intends to purchase the Subject Property and wishes to fulfill one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* protections under Superfund regulations, as well as to assess potential regulatory, liability and valuation issues.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

The topography, geology and hydrogeology commonly control the migration of chemicals released at a site/facility. The relative location of the properties will often define their potential interaction and hydraulic connection. The description of the physical setting for the Subject Property is provided below, starting with the topography and geology. The estimated surface water and groundwater flow directions are then estimated and described.

4.1.1 Geology and Topography

The Subject Property was located in the Piedmont physiographic province of South Carolina, which is characterized primarily by medium- to high-grade metamorphic rocks with scattered igneous intrusions and some Triassic-aged sedimentary rocks. Topography in the province is variable and ranges from gently rolling hills in the southeast to moderate to steep hills in the northwest. Based on the United States Geological Survey (USGS) 7.5-minute topographic quadrangle map of the area (*Anderson, South Carolina,* dated 1957), and the USGS topographic map (accessed April 2, 2026) elevations in the vicinity of the Subject Property range from approximately 700 feet above mean sea level (msl) to approximately 800 feet above msl. Elevations at the Subject Property ranged from approximately 700 feet above msl to approximately 780 feet above msl. Topography at the Subject Property generally slopes down to the southwest towards Dye Creek. Figure 2 shows the topography of the Subject Property and surrounding areas.

The metamorphic rocks comprising the Piedmont were formed when older “parent” rocks were subjected to high temperatures and/or pressures during regional metamorphism that occurred during the creation of the Appalachian Mountains. The same high temperatures and pressures also caused some “parent” rocks to fully melt and subsequently recrystallize as intrusive igneous rocks. In addition to the igneous and metamorphic rocks, some Triassic-aged sedimentary rocks, deposited during early rifting of the proto-Atlantic Ocean, exist in a few small areas. These rocks generally consist of alluvial conglomerates, sandstones, siltstones and mudstones. According to the *Geologic Map of South Carolina*, the Subject Property and immediately surrounding areas are underlain by the Sixmile Thrust Sheet which consists of schist, amphibolite and gneiss.

4.1.2 Groundwater Flow

The uppermost occurrence of groundwater in this area is contained within pore spaces of the underlying sediments. Groundwater recharge occurs by seepage of water through the soil and/or rock or by flowing directly into recharge areas of the sediments. The primary source of recharge water is from precipitation that falls in the area but can also originate from river discharge during dry periods. Groundwater is generally unconfined with some perched zones. Regional groundwater flow is to the southeast. Local groundwater flow can generally be expected to flow in the direction of topography, with the groundwater table mimicking the surface topography and the direction of groundwater flow expected to generally conform to that of the surface water. Groundwater flow below the Subject Property is expected to flow to the southwest towards Dye Creek. Areas considered hydraulically upgradient of the Subject Property are located within approximately 1,500 feet to the north, 500 feet to the west, and 1,500 feet to the east.

4.1.3 Preliminary Aquatic Resource Investigation

United Consulting reviewed available maps (National Wetland Inventory, Soil Survey, USGS Topographic) and aerial photographs to identify if previously mapped wetlands, mapped hydric soils, and landforms indicating possible wetlands are located on or adjoining to the Subject Property.

The U.S. Geological Survey National Topographic Map of the area was reviewed prior to the site visit. No streams or wetlands were mapped on the Subject Property. An intermittent stream was mapped flowing south of a pond on the southern portion of the Subject Property. No prominent drainage swales were mapped on the Subject Property. The National Wetland Inventory (NWI) Digital Map was reviewed to determine if any known wetlands or other jurisdictional waters were mapped on the Subject Property. A riverine feature was mapped flowing south out of a freshwater pond feature on the southern portion of the Subject Property in the approximate areas of the features mapped on the USGS topographic map.

Concurrent with this Phase I, United Consulting also conducted a Preliminary Aquatic Resource Investigation on the Subject Property. A perennial stream feature was observed flowing south out of the southeast corner of a pond on the south-central portion of the Subject Property. The feature flowed south before flowing off-site across the southern boundary of the Subject Property. The feature was characterized by continuous flowing water, a clear ordinary high-water mark (OHWM), the presence of pools and riffles, and coarse substrate including rocks and gravel and was approximately five to twelve feet in width. Two wetland areas were observed along the banks of the perennial stream feature. These wetland features were approximately three to six feet wide and contained saturated surface soils, wetland vegetation, and hydric soils. An intermittent stream channel flowed from a culvert near the southwest portion of the pond. A portion of this channel contained paved concrete before transitioning into a substrate of silt, sand, and clay. The intermittent stream flowed south southeast and into the perennial stream channel.

An intermittent stream feature was observed flowing south out of the southwestern corner of the on-site pond. The feature flowed south before converging with the on-site perennial stream. The feature was characterized by intermittent flow, a clear OHWM, and a substrate coarser than surrounding areas. Portions of the feature were contained within a concrete spillway. Three linear wetland areas were observed along the intermittent stream feature. These features were approximately one to five feet in width and contained saturated surface soils, wetland vegetation, and hydric soils. A copy of the Preliminary Aquatic Resources Investigation report is reproduced in Appendix H.

4.2 Standard Environmental Record Sources

4.2.1 Search Basis:

Reasonably ascertainable Federal and State environmental agency records were reviewed for evidence of regulated or investigated facilities within the minimum search distances outlined by ASTM E 1527-21 and 40 CFR § 312, which are presented below in Table 1.

4.2.2 Record Search:

United Consulting utilized a commercial database reporting company (Environmental Data Resources, Inc., or EDR) to provide Federal, State, and Tribal environmental records. The search was conducted by outlining the property boundaries within the EDR mapping tool and requesting a search of applicable environmental databases for the required search distances. Due to the EDR Geocoding capabilities, facility locations are not always exact; therefore, some facilities may appear within the database reports that are actually beyond the required search distances. United Consulting field located the listed facilities and only those facilities confirmed to be within the respective ASTM or AAI search distances are referenced in this report. Therefore, some facilities may be shown in the database report that are not within the applicable search distances and as such, are not discussed in this report. A copy of the database report used for the regulatory agency review is included in Appendix C. The facilities identified and search records reviewed are listed in Table 1.

Facility Index System (**FINDS**)	**1**	-

NOTES:
The list/database information was obtained from Environmental Data Resources, Inc. (EDR). EDR updates their system information routinely. Their databases are derived from databases developed by various government agencies. United Consulting cannot warrant the accuracy of the information included in these databases. The EDR data was relied upon for this Assessment.
[1] The RCRA-Generators database includes Large Quantity Generators (LQG), Small Quantity Generators (SQG), Very-Small Quantity Generators (VSQG), and Non-Generators (Non-Gen)
[2] These are PFAS associated listings identified by EDR and listed under their Other Ascertainable Records.

4.2.3 Listed Regulated Facilities:

The Subject Property was identified on the SHWS, Voluntary Cleanup Program (VCP), South Carolina Brownfields, RCRA Non-Gen, and FINDS databases due to prior operations as a textile mill. There were 17 off-site listed regulated facilities identified within the prescribed search distances of the Subject Property, some on multiple databases. The identified facilities are further discussed below in Section 4.4.

4.2.4 Orphan Facilities:

The regulatory database report includes a list (Orphan List) of facilities that could not be mapped due to poor or incomplete address information. United Consulting reviewed this list, which included four orphan facilities, to determine if these orphan facilities were located within the respective search distances from the Subject Property. These orphan facilities were not located within the applicable search distances from the Subject Property or were at indeterminate locations.

4.2.5 Other Notable Facilities:

Other notable facilities include those businesses, properties or facilities that were not listed as regulated facilities but were observed during the reconnaissance and appear to represent potential RECs. Other notable facilities also include those facilities that were listed under non-ASTM or AAI databases or were outside the required search distances. No other notable facilities were identified at the time of the site reconnaissance.

4.3 Additional Environmental Record Sources

4.3.1 Internet Searches

A Google search was conducted for the addresses of the Subject Property (500 Glenn Street, Anderson, South Carolina). United Consulting also conducted a search for the addresses of the Subject Property using the EPA EnviroFacts search (https://enviro.epa.gov/). Articles related to the former Brogon/Appleton Mill operations as well as an EPA RCRA report were returned. The EPA reported no violations as of the date of last compliance monitoring (April 13, 1984).

4.3.2 Historical Facilities:

EDR has compiled a proprietary list of potential historical facilities by searching business directories available to EDR. The facilities identified in this compilation include those facilities that may have operated as gasoline stations/filling stations/service stations or dry-cleaning establishments. Three historical automotive facilities were identified within one-eighth mile of the Subject Property.

4.4 Discussion of Identified Facilities:

The Subject Property was identified on the SHWS, VCP, South Carolina Browfields, RCRA Non-Gen, and FINDS databases due to prior operations as a textile mill. There were 17 off-site listed regulated facilities identified within the prescribed search distances of the Subject Property, some on multiple databases. United Consulting's conclusion whether the identified facilities represent RECs to the Subject Property is further discussed below. Based on area topography, only those facilities identified adjoining the Subject Property and within the apparent up-gradient watershed of the Subject Property are included in Table 2 below.

Table 2: Summary of Identified Facilities

No.	Facility & Address	Program	Proximity & Direction	Apparent Hydraulic Relation	REC, Y/N
1	**Former Brogan/Appleton/JP Stevens & Co. Mill 850/500 Glenn Street**	**SHWS, VCP, Brownfields, RCRA Non-Gen, FINDS**	**On-site**	**Connected**	**Y**
2	Tag & Label Corporation 1700 W Whitner Street	RCRA Non-Gen, RCRA VSQG, FINDS	Adjoining West	Up-gradient	N
3	Gerald's Radiator 1705 W Whitner Street	LUST/UST	Adjoining Southwest	Down-gradient	N

Note:
Facilities identified in **BOLD** are considered RECs
Facilities identified in the EDR Report and not listed in Table 2 are not considered to be RECs

4.4.1 Facilities Identified on the Subject Property

Based on review of the EDR regulatory review, the Subject Property was identified on the SHWS, VCP, South Carolina Browfields, RCRA Non-Gen, and FINDS databases. A brief discussion of the identified facility follows:

Former Brogan/Appleton/JP Stevens & Co. Mill
850/500 Glenn Street

The former Brogan/Appleton/JP Stevens & Co. Mill was identified on the SHWS, VCP, South Carolina Brownfields, and the RCRA Non-Gen databases due to former textile mill operations. At the time of reconnaissance, the foundations of former mill structures and a smokestack remained. Portions of the remaining foundations contained basement areas and basins. The facility was reportedly enrolled in the Brownfield and VCP programs and later withdrawn prior to completion. Textile mill operations reportedly began in 1902 and ceased in 1985, and the remaining structures reportedly burned in 2001 and were demolished following the fire. Textile mills, such as this, typically utilized PFAS, dyes containing heavy metals, and petroleum products during the manufacturing of textiles. A Freedom of Information Act request was submitted for regulatory database files associated with the Subject Property. According to the files reviewed, soil and groundwater at the Subject Property have not been analyzed for possible contamination from the former textile mill operations. Additionally, review of the Sanborn fire insurance maps, dated 1918 through 1961, showed a small structure labeled Oil House, likely containing fuel oil, on the eastern portion of the Subject Property near the boiler room, engine room, and smokestack. According to a letter addressing a site visit conducted in October 2001, a fuel oil spill was confirmed, but was reportedly “95% percent recovered” on the day of the spill. Based on the lengthy textile mill operations, and lack of soil and groundwater analytical data at the Subject Property, it is United Consulting’s opinion that this facility **does represent a REC** to the Subject Property.

4.4.2 Facilities Identified Outside of the Subject Property Boundaries

Review of the EDR regulatory review and other research identified the following off-site facilities in the vicinity of the Subject Property.

Tag & Label Corporation
1700 W Whitner Street
Adjoining West

The western adjoining Tag & Label Corporation was listed on the RCRA Non-Gen and RCRA Very Small Quantity Generator (VSQG) databases due to printing and label making operations. No violations have been reported, and the facility was listed as an inactive RCRA facility on the Enforcement and Compliance History Online (ECHO) database. Due to the nature of this facility and the lack of violations from this facility, it is United Consulting’s opinion, this facility **does not represent a REC** to the Subject Property.

Gerald’s Radiator
1705 W Whitner Street
Adjoining South

The southwestern adjoining Jerald Radiator was listed on the LUST database due to a release of gasoline from a UST at this facility, reported in December 1991.

A series of groundwater monitoring events occurred between 2003 and 2008 in which 14 groundwater monitoring wells were sampled and analyzed for BTEX, methyl tert-butyl ether (MTBE), and naphthalene quarterly. According to a Groundwater Monitoring Report, dated July 22, 2008, gasoline constituents were reported below the site-specific target levels (SSTLs) in each of the 14 monitoring wells. BTEX, MTBE, and naphthalene were below laboratory detection limits in a monitoring well approximately 100 feet from the southern boundary of the Subject Property. Based on the file review documents, and apparent down-gradient hydraulic relationship to the Subject Property, it is United Consulting's opinion that this release **does not** represent a REC to the Subject Property.

4.5 Historical Document Review

4.5.1 Approach:

Historical research was conducted to assess the history of the Subject Property and surrounding areas from an environmental perspective. This research included reviewing available aerial photography/satellite imagery, city directories, Sanborn® Fire Insurance Maps, and topographic maps, as readily available and outlined below.

- Aerial Photographs, dated 1947, 1951, 1955, 1976, 1981, 1989, 1999, 2006, 2011, 2015, 2019, 2023.
- City Directories, dated 1922 through 2024.
- 30-Minute USGS Topographic Map: *Pickens, South Carolina*, dated 1888, 1894
- 15-Minute USGS Topographic Map: *Anderson, South Carolina*, dated 1957
- 7.5-Minute USGS Topographic Map: *Anderson, South Carolina*, dated 1983, 2014, 2017, 2020, 2024
- Sanborn® Fire Insurance Map: *Anderson, South Carolina,* dated 1918, 1925, 1948, 1961.

No other pertinent historical aerial photography, area specific documentation or maps were readily available for review. Copies of the historical review documents are located in Appendix D.

4.5.2 Subject Property Review:

4.5.2.1 Aerial Photography/Satellite Imagery

The 1947 through 1981 aerial photographs showed the Subject Property developed with the former Appleton Mill. The southern portion of the Subject Property was shown as cleared and undeveloped, and contained a pond. The 1989 and 1999 aerial photographs showed two large structures at the Appleton Mill blackened, likely from a reported fire at the Appleton Mill in the 1980s.

The 2006 aerial photograph no longer showed the Appleton Mill structures on the Subject Property. The foundations of the structures remained visible. The southern portion of the Subject Property was shown as wooded. Changes to the Subject Property were not shown in subsequent aerial photographs.

4.5.2.2 City Directories

The Subject Property was referenced by the street address 844 Glenn Street and was listed as Appleton Mfg. Co, Glenn Street School, Broadwell Pressing Club, and Glenn St Pentecostal Church in the 1927 city directory, and Stevens J P & Co Inc in the 1959 through 1968 city directories. The Subject Property address 844 Glenn Street was listed as a private residence in the 1970 through 1991 city directories.

The provided Subject Property address of 500 Glenn Street was first identified in the 1992 city directory as Gelmart Ind Inc. It remained listed as such through the 1996 city directory. The Subject Property was not listed in subsequent city directories.

4.5.2.3 Sanborn® Fire Insurance Maps

The 1918 and 1925 Sanborn Fire Insurance Maps showed the Subject Property developed with two large, two-story mill structures, multiple smaller structures, and two rail lines. The structures were labelled as Brogan Mills Fancy Flannels in 1918 and Appleton Co. Brogon Mills Mfg. Fancy Flannels in 1925.

The 1948 and 1961 Sanborn Fire Insurance Maps showed the addition of a large two-story structure attached to the north side of the existing two-story structure, and multiple warehouses. The structures were labelled as Appleton Co. Brogon Mills Mfg. Fancy Flannels in 1948 and J.P. Stevens & Co. Inc. Appleton Plant Mfg. Fancy Flannels in 1961.

4.5.2.4 Topographic Maps

Due to the scale of the 1888 and 1894 USGS topographic maps, no structures were mapped on the Subject Property.

The 1957 USGS topographic map showed five structures on the Subject Property. Two rail spurs were mapped on the east and west sides of the largest structure. A road and pond were mapped on the Subject Property to the south of the structures. The 1983 USGS topographic map showed two of the aforementioned structures combined into the larger structure. A stream was mapped flowing from the

The 2014 through 2024 USGS topographic maps only map landmarks, not individual structures. No landmarks were mapped on the Subject Property.

4.5.3 Adjoining Property Review:

4.5.3.1 Aerial Photography/Satellite Imagery

The 1947 through 1955 aerial photographs showed the properties adjoining the Subject Property as single family residences. Glenn Street was shown bounding the Subject Property to the west and Appleton Street was shown bounding the Subject Property to the east. The 1976 aerial photograph showed the southwestern and southern adjoining properties as commercial. Changes were not shown in the subsequent aerial photographs.

4.5.3.2 City Directories

The northern adjoining property, located at 627 Glenn Street, was listed as Glenn St Pentecostal Church, Broadwell Pressing Club, Glenn Street School, and Appleton Mfg. Co in the 1927 city directory, Stevens J P & Co Inc (Appleton Mills) Cotton Yds Mfrs in the 1959 through 1968 city directories, and individual residents in the 1970 through 2024 city directories.

The western adjoining property, located at 300 Glenn Street, was listed as Clarke's Grocery in 1959 through 1968 city directories, Addison's Grocery in the 1970 city directory, Franks Grocery in the 1971 city directory, Poole's Grocery in the 1976 through 2000 city directories, Munchies Grocery in the 2010 city directory, and Evergreen in the 2022 city directory.

The southwestern adjoining property at 1700 W Whitner Street was listed as Tag & Label Corp in the 1976 through 1986 city directories, Anderson Quick Print and Attaway Inc in the 1995 through 2000 city directories, and Attaway Inc in the 2005 through 2024 city directories.

The southwestern adjoining property at 1705 W Whitner Street was listed as various Amoco Service Stations in the 1954 through 1981 city directories, and Gerald's Radiator Repair in the 1991 through 2024 city directories.

The southern adjoining property at 1701 W Whitner Street was listed as King's Curb Market Grocery in 1959 and Allen's Curb Market Produce in the 1964 through 1970 city directories.

The southern adjoining property at 1703 W Whitner Street was listed as Tommy's Liquor Store & Party Shop in the 1981 city directory, Dollar Finance in the 1991 through 1996, Deuces Video Games in the 2000 city directory, R & R Cycle in the 2005 city directory, and Hard Kox in the 2022 city directory.

The southern adjoining property at 1603 W Whitner Street was listed as Craft's Garage Repairs and Craft's Used Cars in the 1950 through 1970 city directories.

The southeastern adjoining property at 1511 W Whitner Street was listed as Mr. Alternator in the 1995 to 2010 city directories, All Charged Up in the 2014 through 2022 city directories, and Top Quality Collision Center Inc and Cheap Tires in the 2024 city directory.

The southeastern adjoining property at 1514 W Whitner Street was listed as Hanks Cecil Grocery in the 1950 through 1971 city directories, Hanks Cecil Beer in the 1976 through 1991 city directories, A Little Pub in the 1996 city directory, Larrys Place in the 2000 city directory, and Big D's Lounge in the 2010 city directory.

The remaining adjoining properties were listed as individual residents in the city directories reviewed.

4.5.3.3 Sanborn® Fire Insurance Maps

The 1918 through 1961 Sanborn Fire Insurance Maps showed the properties adjoining the Subject Property as single family dwellings.

4.5.3.4 Topographic Maps

The 1957 and 1983 USGS topographic maps showed the properties adjoining the Subject Property in a shaded urban area. Individual structures were not mapped in this area. One structure was mapped adjoining the Subject Property to the southwest.

The 2014 through 2024 USGS topographic maps only map landmarks, not individual structures. No landmarks were mapped adjoining the Subject Property.

4.5.4 Summary of Historical Document Review:

4.5.4.1 On-site

Based on the historical documents reviewed, the Subject Property was historically developed with the Brogon/Appleton/JP Stevens and Co. Textile Mill since at least 1918 until the structures were removed from the site in the 2000s. The southern portion of the Subject Property has historically been cleared or wooded since some time before 1947.

4.5.4.2 Adjoining Properties

Based on the historical documents reviewed, properties adjoining to the Subject Property were historically residentially developed since sometime before 1918. Properties adjoining the Subject Property to the south have been developed commercially since sometime before 1954.

5.0 RECONNAISSANCE

5.1 Subject Property Reconnaissance

5.1.1 Methodology and Limiting Conditions:

United Consulting's reconnaissance of the Subject Property was performed on March 30, 2026. The reconnaissance was conducted to look for recognized environmental conditions at the Subject Property. The reconnaissance consisted of an on-site, visual review by a representative from United Consulting: Mr. Michael Abernathy, Senior Environmental Specialist. The reconnaissance was performed by walking portions of the perimeter boundaries of the Subject Property and the interior of the Subject Property structure. United Consulting did not encounter limiting conditions that would prevent United Consulting from forming an opinion regarding environmental conditions at the Subject Property.

5.1.2 Results:

The results of the reconnaissance are summarized in the table below. Additional discussion is provided following the table as appropriate. Photographs of the Subject Property are included in Appendix E.

Table 2: Site Reconnaissance Information

Items	Observed (Yes/No)	Discussion (Blanks indicate items not observed on the Subject Property)
Current Use of the Subject Property	No	Discussed below
Contracted Maintenance Services	No	
Drums	No	
Easements	No	
Hazardous Substances and Petroleum Products in Connection with identified uses	No	
Hazardous Substances and Petroleum Products Containers	No	
Odors	No	
Polychlorinated Biphenyl (PCB) Equipment	No	
Ponds and/or Pools of Liquid or Sludge	Yes	A pond and two streams were observed on the southern portion of the Subject Property.
Roads and Access	Yes	The Subject Property was accessed via Glenn Street.
Sewage Service	Yes	Municipal sewage service was available to the Subject Property vicinity.
Solid Waste	Yes	A large amount of solid waste was observed on the Subject Property including construction debris, used tires, and household waste.
Stained Soil or Pavement	Yes	An area of blackened asphalt was observed.
Storage Tanks (ASTs/USTs)	No	

Items	Observed (Yes/No)	Discussion (Blanks indicate items not observed on the Subject Property)
Stressed Vegetation	No	No stressed vegetation was observed on the Subject Property.
Sumps and/or Pools of Liquid or Sludge	No	
Wastewater/Process Water	No	
Water Service	Yes	Municipal water service was available to the Subject Property area.
Wells	Possible	A possible water well was observed on the Subject Property.
Interior Observations		
Drains/Sumps/Trenches	N/A	
Heating/Cooling	N/A	
Hydraulic Equipment	N/A	
Service/Equipment Pit	N/A	
Stains or Corrosion	N/A	

5.1.2.1 Site Structures/Property Use:

At the time of the site reconnaissance, the Subject Property consisted of foundations of the former textile mill structures on the northern portion of the Subject Property. The southern portion of the Subject Property was wooded.

5.2 Area Reconnaissance

5.2.1 Methodology:

A foot and automobile tour of the surrounding area was conducted to assess area land use and to look for evidence of potential sources of hazardous substances on adjoining or nearby properties. The reconnaissance was performed by the same individual while walking along the Subject Property boundaries and driving along the nearby public roads. Observations were limited to what could be seen from publicly accessible areas.

5.2.2 Results:

The results of the reconnaissance are included in the table below and summarized further below. Photographs of the surrounding area are included in Appendix E.

Table 3: Area Reconnaissance Information

Items	Observed (Yes/No)	Discussion (Blanks indicate items not observed in the vicinity of the Subject Property)
Area Structures	Yes	Discussed below.
Area Property Use	Yes	Discussed below.
Drums	No	
Easements	No	
Hazardous Substances and Petroleum Products in Connection with identified uses	No	
Hazardous Substances and Petroleum Products Containers	No	
Ponds and/or Pools of Liquid or Sludge	No	
Solid Waste	Yes	Solid household waste was observed along roadways and at nearby residences.
Stained Soil or Pavement	No	
Storage Tanks (ASTs/USTs)	Yes (Possible)	A pump island from a former gasoline station was observed along W. Whitner Street.
Stressed Vegetation	No	
Wells	No	

5.2.2.1 Area Structures/Property Use

Properties adjoining the Subject Property were mostly single-family residences. Properties adjoining the Subject Property to the south were commercial, including two automotive repair stations.

6.0 INTERVIEWS

6.1 Interview Methodology

During and following the reconnaissance, interviews were conducted with people familiar with the Subject Property. These people were questioned as to their knowledge of any past activities at the Subject Property, which might present the potential for recognized environmental conditions. The interviews provided the following information. Copies of interview forms are included in Appendix F.

6.2 Property Owner(s)

Mr. Geovani Benavides was listed as the current Subject Property owner. Mr. Benavides completed the owner questionnaire on April 8, 2026. Mr. Benavides stated that he has owned the Subject Property for approximately 22 years and was unaware of past use of the Subject Property. Mr. Benavides stated that he has no knowledge of hazardous materials, wells, ASTs/USTs, structures, or other potential environmental concerns associated with the Subject Property.

6.3 Site Manager/Occupants/Local Residents

No local residents were available to interview at the time of the site reconnaissance.

6.4 Local Government Officials

United Consulting attempted to contact the Anderson County Fire Department regarding fire records at the Subject Property on April 8, 2026. As of the issuance of this report, the Anderson County Fire Department has not responded.

7.0 VAPOR ENCROACHMENT SCREEN

7.1 Purpose

The purpose of the vapor encroachment screening was to assess for a potential vapor encroachment condition (VEC) at the Subject Property. A VEC is generally defined as the presence or likely presence of certain volatile chemicals that can migrate as a vapor into the sub-surface of the Subject Property caused by the release of vapors from contaminated soil or groundwater or both either on or near the Subject Property as identified by the Tier 1 or Tier 2 procedures in the ASTM Standard Guide for "Vapor Encroachment Screening on Property Involved in Real Estate Transactions," E2600-15.

7.2 Tier 1 Vapor Encroachment Condition Screening:

Using the information as gathered and documented within this Phase I Environmental Assessment, have known, or suspected potentially contaminated (up- and/or side-gradient) properties with Chemicals of Concern (COC) been identified within the Area of Concern (AOC):

Chemical of Concern (COC)	Search Distance*	Facilities Identified? (Y/N)
Petroleum Constituents	1/10 Mile	Y
Non-Petroleum Volatile Chemicals	1/3 Mile	Y
Notes: *Approximate minimum search distance from the perimeter of the Subject Property.		

For down-gradient, off-site potentially contaminated properties, the AOC is reduced to the critical distance. For cross-gradient, off-site potentially contaminated properties, the AOC is reduced to the critical distance plus one half of a reasonable estimation of the contaminated plume width.

Is potential source within the critical distance as outlined above?

Chemical of Concern (COC)	Critical Distance (+ width for cross-gradient)	Potential Source Within Critical Distance? (Y/N)
Petroleum Constituents	30 Feet	Y
Non-Petroleum Volatile Chemicals	100 Feet	Y

7.2.1 Identified Facilities within AOC and/or Critical Distance:

- On-site former textile mill operations

Based on the above information, as supported with information documented in the Phase I Environmental Assessment Report, the Tier 1 screening conclusion is:

	Check which Applies
A VEC exists	☒
A VEC does not exist	☐

7.3 Tier 2 Vapor Encroachment Condition Screening:

A Tier 2 vapor encroachment screening was completed using the non-invasive data collection technique through regulatory file information and previously performed environmental reports, as available. Invasive data collection is outside the scope of our services.

Is data available regarding the limits of the contaminated plume at the above identified facilities? Unknown If yes or unknown, a VEC exists. The critical distance is the lineal distance in any direction from the nearest edge of the contaminated plume to the nearest edge of the Subject Property.

Chemical of Concern (COC)	Critical Distance	Plume Within Critical Distance? (Y/N/U)
Petroleum Constituents	30 Feet	U
Non-Petroleum Volatile Chemicals and petroleum LNAPL (i.e., free product)	100 Feet	U

As no files including soil or groundwater analytical data were obtained, no data is available regarding potential contamination.

Based on available documentation of contaminant plume information, the non-invasive Tier 2 Screening conclusion is:

	Check which Applies
A VEC exists	☒
A VEC does not exist	☐

8.0 DATA GAPS

8.1 Purpose

United Consulting conducted a thorough review on the use of the Subject Property during completion of this Phase I Environmental Assessment. The below table summarizes many of the common data failures/gaps encountered during the completion of a Phase I Environmental Assessment. Per ASTM and AAI standards, United Consulting has relied on 'User Provided Information' to complete this property assessment. If the user fails to provide this information to United Consulting, it could result in a determination that "all appropriate inquiry" for this site is incomplete. Further, United Consulting is not responsible for any errors or omissions associated with the User Provided Information.

Table 4: Summary of Potential Data Failures/Gaps

Report Section		Information/Data	Comment	Significant Data Gap (Y/N/NA)	Additional Action(s) (Y/N/NA)
Section 3 - User Provided Information					
3.1		Title History	Not Provided	N	Y
3.2		Environmental Lien Review	Not Provided	N	Y
3.3		Specialized Knowledge	Obtained	N	N
3.4		Commonly Known Information	Obtained	N	N
3.5		Valuation Reduction for Environmental Issues	Client Commented	N	N
Section 4 - Historical Use Information					
4.5.2.1	4.5.3.1	Aerial Photographs	Obtained	N	N
4.5.2.2	4.5.3.2	City Directories	Obtained	N	N
4.5.2.3	4.5.3.3	Sanborn Fire Insurance Maps	Obtained	N	N
4.5.2.4	4.5.3.4	Topographic Maps	Obtained	N	N
Section 5 - Site Reconnaissance					
5.1.2		Exterior Accessibility	Accessible	N	N
5.1.2		Interior Accessibility	N/A	N	N
Section 5 - Area Reconnaissance					
5.2		Accessibility	Accessible	N	N
Section 6 - Interviews					
6.2		Property Owner	Obtained	N	N
6.3		Site Manager/Occupants/Local Residents	Not Obtained	N	N
6.4		Local Government Officials	Contacted; no response	N	N

Notes:
Common Data Descriptions: Not Provided, Provided, Not Contacted, Contacted, Accessible, Not Accessible, Obtained, Not Obtained, Gap, Failure, NA = Not Available
Per ASTM E 1527-21, failure to provide the 'user provided information' to the environmental professional could result in a determination that "all appropriate inquiry" for this site is incomplete.

8.2 Discussion of Data Gaps

United Consulting conducted a thorough historical review on the past use of the Subject Property during completion of this Phase I Environmental Assessment.

The historical research included sources from 1888 to present. The lack of a local interview and response from the fire department represents data gaps to this report. These data gaps did not prevent United Consulting from forming an opinion regarding RECs at the Subject Property and therefore are not deemed to be significant data gaps.

United Consulting recommends that the individual conducting the title research for the Subject Property also search for environmental liens and activity and use limitations connected with the Subject Property. If environmental liens and activity and use limitations are found, United Consulting should be contacted to assess their significance.

9.0 FINDINGS AND OPINIONS

The Subject Property consisted of 34.59 acres containing the foundation of a former textile mill on the north and central portions of the Subject Property. The southern portion of the Subject Property was wooded and contained a pond and two stream channels. Historically, the northern portion of the Subject Property was developed with a textile mill since sometime before 1918 until sometime in the 2000s when the remaining mill buildings were demolished.

At the time of the site reconnaissance, the Subject Property At the time of the site reconnaissance, the Subject Property was undeveloped and contained remnants of the former textile mill operations. Solid household waste, construction debris, and used tires were observed throughout the central and northern portion of the Subject Property. Evidence of fire was observed in at least three locations on the north and central portions of the Subject Property. Portions of the remaining mill foundations contained basement areas and basins containing liquid and solid waste. **In United Consulting's opinion, the lengthy history of operations and observations/conditions during the site reconnaissance represents a recognized environmental condition (REC) to the Subject Property.**

The Subject Property was identified on the SHWS, VCP, South Carolina Brownfields, and the RCRA Non-Gen databases due to former textile mill operations. Textile mill operations reportedly began in 1902 and ceased in 1985, and the remaining structures reportedly burned in 2001 and were demolished following the fire. Textile mills, such as this, typically utilize per- and poly fluoroalkyl (PFAS), dyes containing heavy metals, and petroleum products in the manufacturing of textiles. A Freedom of Information Act request was submitted for regulatory database files associated with the Subject Property. According to the files reviewed, soil and groundwater at the Subject Property have not been analyzed for possible contamination from the former textile mill operations. **Based on the lengthy textile mill operations, and lack of soil and groundwater analytical data at the Subject Property, it is United Consulting's opinion that this facility does represent a REC to the Subject Property.**

The southwestern adjoining Gerald's Radiator was listed on the LUST database due to a release from a gasoline UST reported in December 1991. According to regulatory files reviewed, groundwater was collected from a monitoring well, located approximately 100 feet southwest of the Subject Property, and analyzed for BTEX, MTBE, and naphthalene. Laboratory results indicated that constituents were below laboratory detection limits. Based on the file review documents, and apparent down-gradient hydraulic relationship to the Subject Property, it is United Consulting's opinion that this release **does not** represent a REC to the Subject Property.

The Vapor Encroachment Screening included a Tier 1 and non-invasive Tier 2 screening. Based on the results of the screening, a VEC does exist at the Subject Property which is associated with the former on-site textile mill operations.

United Consulting identified an apparent perennial stream channel, an intermittent stream channel, a pond and a wetland area, located on the southern portion of the Subject Property, which we believe would currently be regulated as federal jurisdictional WOTUS by the USACE under Section 404 of the Clean Water Act. Under the current WOTUS rule, in our opinion, the identified wetland would be considered jurisdictional WOTUS.

This assessment has revealed no HRECs, CRECs, or Significant Data Gaps in connection with the Subject Property.

10.0 CONCLUSIONS

United Consulting has performed a Phase I Environmental Assessment for the Subject Property in substantial conformance with the scope and limitations of ASTM Practice E 1527-21 and the AAI Rule (in 40 CFR § 312). Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed HRECs, CRECs, or significant data gaps in connection with the Subject Property.

This assessment has identified the former textile mill operations on the Subject Property as a REC due to the lengthy history of operations and likelihood of impacts to soil and groundwater due to the nature of textile manufacturing.

United Consulting recommends conducting a Phase II Environmental Assessment to assess whether the on-site REC has impacted (i.e., contaminated) the Subject Property.

If the Phase II ESA finds evidence that the Subject Property has been impacted, United Consulting recommends re-enrolling the Subject Property into the South Carolina Brownfields Program in order to address the possible soil/groundwater contamination related to the former textile mill operations in the area of the on-site structure remnants.

11.0 DEVIATIONS

The Phase I Environmental Assessment was performed to substantially meet the requirements of ASTM for such investigations. The technical requirements of the ASTM standard, revised in the year 2021, were followed.

United Consulting's opinions included issues beyond strict liability under CERCLA, or Superfund. No substantial deviations or limiting conditions to the ASTM were made outside of those previously stated and our recommendations for a Phase II and enrollment into the South Carolina Voluntary Cleanup Program.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, and based on a reasonable interpretation of the applicable regulatory language, I meet the definition of Environmental Professional defined in 40 CFR § 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR § 312.

Notwithstanding the above, I have prepared this report in conformance with standards and practices prevailing among environmental professionals practicing in our locality, which standards, and practices have governed our interpretation and application of regulatory standards, including without limitation, 40 CFR § 312. This practice does not address requirements of any state or local laws. Users are cautioned that state or local laws may impose environmental assessment obligations that are beyond the scope of this practice.

Further, this report has been prepared in accordance with instructions, guidance, standards, or limitations communicated to me by its initial user, as identified in the report. In the case of any conflict, apparent or actual, between regulatory standards and such user directives, I will give priority to the expressed wishes of the user.

In signing this report, I am not attesting to or certifying the accuracy of matter set forth herein (including, without limitation, the accuracy of the information received from sources such as interviews, regulatory databases, public records, photographs, maps, and prospective recipients of this report). Rather, this report contains opinions and conclusions based upon my knowledge and experience applied in reasonable accordance with the prevailing industry standards as described above. No environmental assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance with this practice is intended to reduce, but not eliminate, uncertainty regarding the existence of recognized environmental conditions, and this practice recognizes reasonable limits of time and cost.

_____
Signature of Environmental Professional
Timothy J. Beck, PG (GA)
Executive Vice President

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

SHWS: State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

A review of the SHWS list, as provided by EDR, and dated 03/04/2025 has revealed that there are 14 SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Health & Environmental Control's Leaking UST list.

A review of the LUST list, as provided by EDR, and dated 10/15/2025 has revealed that there are 6 LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Health & Environmental Control's list: Comprehensive Underground Storage Tanks.

A review of the UST list, as provided by EDR, and dated 10/07/2024 has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

RCR: The Bureau of Land and Waste Management established this Registry to help monitor and maintain sites that have conditional remedies. A Conditional Remedy is an environmental remedy that includes certain qualifications. These qualifications are divided into two major categories: Remedies requiring Land Use Controls and Conditional No Further Actions.

A review of the RCR list, as provided by EDR, and dated 10/01/2024 has revealed that there is 1 RCR site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

EXECUTIVE SUMMARY

ALLSITES: The South Carolina Department of Health and Environmental Control is pleased to have the Public Record for your review. The purpose of this database is two-fold. First, it will provide to communities another form of notice of cleanup activity, allowing them to have more information about assessment and cleanup activities in their area and in the State. Second, it can assist those seeking to redevelop brownfield properties within South Carolina.

A review of the ALLSITES list, as provided by EDR, and dated 11/21/2025 has revealed that there is 1 ALLSITES site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 7 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 7 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ANDERSON GAS CO	FAIR STREET	E 1/2 - 1 (0.577 mi.)	I29	88

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The South Carolina Department of Health and Environmental Control (DHEC) Environmental Facility Information System (SC-EFIS) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The South Carolina Department of Health and Environmental Control (DHEC) Environmental Facility Information System (SC-EFIS) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

J P STEVENS & CO INC APPLETON PLANT (Continued) **1000430145**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The South Carolina Department of Health and Environmental Control (DHEC) Environmental Facility Information System (SC-EFIS) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas.

RIGGINS GARMENT CARE INC. (Continued) **1000235516**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RCR: Registry of Conditional Remedies

The Bureau of Land and Waste Management established this Registry to help monitor and maintain sites that have conditional remedies. A Conditional Remedy is an environmental remedy that includes certain qualifications. These qualifications are divided into two major categories: Remedies requiring Land Use Controls and Conditional No Further Actions.

Date of Government Version: 10/01/2024

AUL: Land Use Controls

The term Land Use Controls or "LUCs" encompass institutional controls, such as those involved in real estate interests, governmental permitting, zoning, public advisories, deed notices, and other legal restrictions. The term also includes restrictions on access, whether achieved by means of engineered barriers (e.g., fence or concrete pad) or by human means (e.g., the presence of security guards). Additionally, the term includes both affirmative measures to achieve the desired restrictions (e.g., night lighting of an area) and prohibitive directives (e.g., restrictions on certain types of wells for the duration of the corrective action). Considered altogether, the LUCs for a facility will provide a tool for how the property should be used in order to maintain the level of protectiveness that one or more corrective actions were designed to achieve.

VCP: Voluntary Cleanup Sites

Sites participating in the Voluntary Cleanup Program. Once staff and a non-responsible party have agreed upon an approved scope of work for a site investigation and/or remediation, the party enters into a voluntary cleanup contract. Staff oversees the cleanup efforts to ensure that activities are performed to our satisfaction. Upon completion of the negotiated work in the voluntary cleanup contract, the non-responsible party receives State Superfund liability protection.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MILL HOUSE
214 M STREET
ANDERSON, SC 29625

TARGET PROPERTY COORDINATES

Latitude (North):	34.507791 - 34° 30' 28.05''
Longitude (West):	82.668062 - 82° 40' 5.02''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	346869.4
UTM Y (Meters):	3819528.2
Elevation:	729 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50050170 ANDERSON NORTH, SC
Version Date:	2024
South Map:	50048391 ANDERSON SOUTH, SC
Version Date:	2024

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

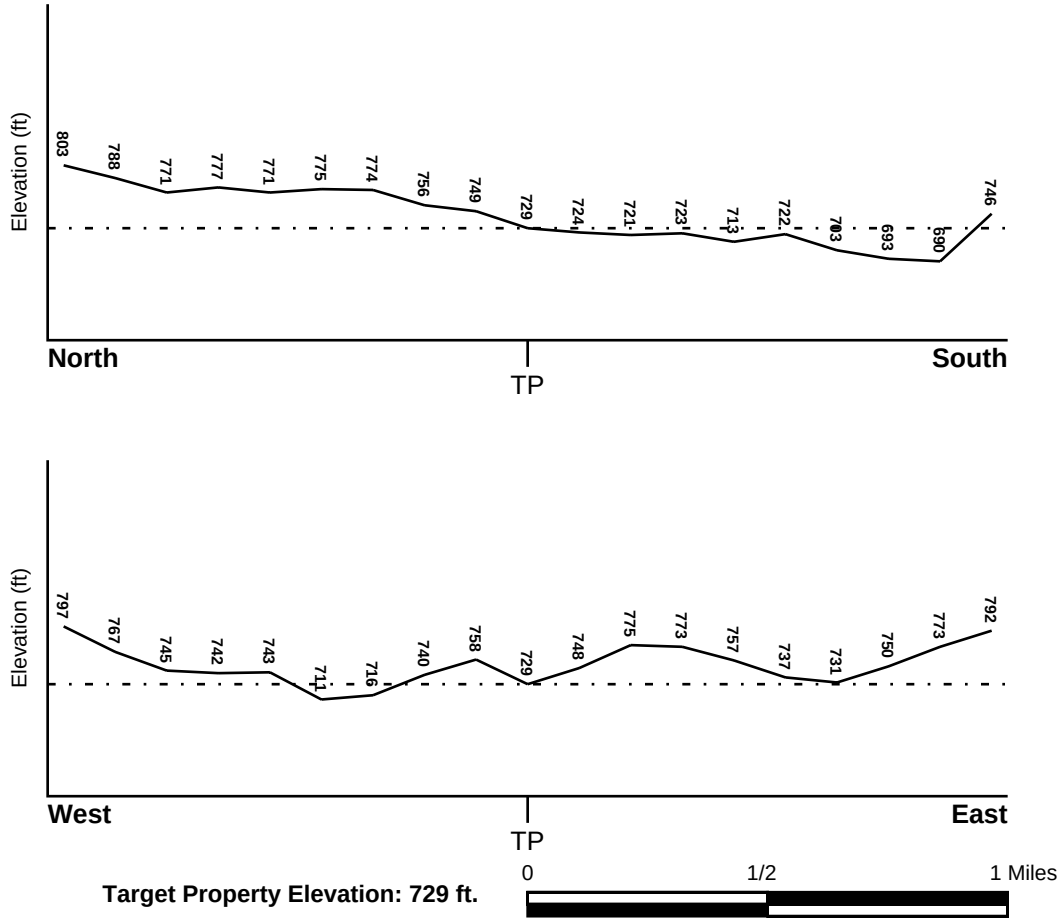
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
45007C0243E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
45007C0244E	FEMA FIRM Flood data
45007C0381E	FEMA FIRM Flood data
45007C0382E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ANDERSON NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches		Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: URBAN LAND

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: WATER

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Natural Resources
Telephone: 803-734-9494

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

South Carolina Water Well Database
Source: Department of Natural Resources
Telephone: 803-734-6440
Water wells in the Coastal Plain counties of South Carolina.

Water Well Database
Source: Department of Natural Resources
Telephone: 864-654-1671
A listing of water wells in the Piedmont (upstate) counties.

OTHER STATE DATABASE INFORMATION

RADON

State Database: SC Radon
Source: Department of Health & Environmental Control
Telephone: 864-241-1090
Radon Test Results by Zip Code

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

The LightBox City Directory Report is designed to assist environmental professionals in evaluating potential liabilities on select properties resulting from past activities. The report includes a search of available business directory data at approximately five-year intervals.

SOURCES

Through agreements with major city directory publishers, including Cole Information, InfoUSA, and Bresser, as well as our own collections (Haines & Stewart), the LightBox City Directory Report offers comprehensive national coverage.
LightBox is authorized to reproduce and redistribute all works featured in this report. The purchaser of this LightBox City Directory Report may include it in their final report(s).

This report includes a search of the following sources:

Contact: Daulton Brown

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by United Consulting Group Ltd. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by United Consulting Group Ltd. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

QUESTIONNAIRE/REQUESTED ITEMS (PAGE 1 OF 2)

Project Name: Mill House

Project ID:

In order to qualify for *Landowner Liability Protections* (LLPs), by the Superfund Reauthorization (in the "*Brownfields Amendments*"), the ***user*** (normally the entity acquiring the property) **must** provide the following information, if available, or a definitive answer that the information does not exist. Failure to provide this information could result in a determination by the EPA that "*all appropriate inquiry*" is not complete.

Site Information	Response
Purpose for conducting Environmental Assessment: If other: SC Housing 9% Application Submittal	☑ Purchase ☐ Lease ☑ Other ☐ Refinance
Current Site Owner or Owner's Representative: Joseph Dabbah Phone Number: Email: josephdabbah@emeritausa.com	
Will other entities need to rely on this Environmental Assessment? (i.e. lenders, partners, etc.)	☐ Yes ☐ No
Entity Name(s): Appleton Property, LLC	

Site History	Response
If available, past site owner: Unknown Phone Number: Email:	
Past Property Usage: ☑ Vacant ☐ Residential ☐ Retail ☐ Commercial ☐ Other	
Petroleum (gasoline, oil, etc) or other chemicals used on-site? If yes, what products?	☐ Yes ☐ No ☐ Unknown
Have there been spills or other releases on-site? If yes, please describe:	☐ Yes ☐ No ☐ Unknown
Have there been clean-up or remedial actions performed on-site? If yes, please describe:	☐ Yes ☐ No ☐ Unknown

Environmental History/Site Condition(s)	Response
Does the purchase price reasonably reflect fair market value of the property, if the property were not contaminated? (EPA wants to know if you are getting a better price because of site contamination)	☑ Yes ☐ No Answer NO if you **are** getting a price reduction due to known contamination on the property.
Do you have specialized knowledge related to environmental conditions in connection with the property? (This can include past investigations, un-recorded site development, unique information you have about the operations at the site, etc.)	☐ Yes ☐ No If Yes, please describe:
Are you aware of commonly known information within the local community about the property regarding potential environmental conditions? (This is generally community known information, such as a fire or large spill.)	☐ Yes ☐ No If Yes, please describe: The site was location to an old mill. unknown further detail.
Are there any obvious indicators that point to the possible presence of contamination of the property? Describe these indicators.	☐ Yes ☐ No If Yes, please describe:

UNITED CONSULTING OWNER ENVIRONMENTAL QUESTIONNAIRE

Project Name:_____

The following are a list of questions to be answered by the property owner or his/her representative relative to the completion of a Phase I Environmental Assessment. Please answer the following questions to the best of your knowledge. If you do not have an answer for a question, please state that the answer is unknown.

1. How long have you owned the Project Site?
   APROX. 22 YEARS
2. What was the historical use of the Project Site?
   UNKNOWN
3. Can you provide names/contact information for any previous owners or occupants of the Project Site?
   UNKNOWN
4. Are there currently or have there been any hazardous materials, such as pesticides, automotive and/or industrial batteries, paints, or other chemicals, stored on the Project Site?
   UNKNOWN
5. Do you know of any dumping that took place on the Project Site or adjacent properties? (including trash, tires, trees and stumps, 55-gallon drums, etc.)
   UNKNOWN
6. Are there currently or have there been any underground storage tanks (USTs) or above-ground storage tanks (ASTs) utilized on the Project Site to store chemicals, oil, fuel, etc.?
   UNKNOWN
7. Are there any drinking water wells or septic tanks associated with the Project Site?
   UNKNOWN
8. Does the Project Site contain any structures? If so, when were the Project Site structures built and/or renovated? If any structures have been removed, when were they removed?
   UNKNOWN
9. Who provides water and sewer service to the Project Site?
   N/A
10. Are you aware of any environmental concerns, such as hazardous materials spills/storage, fires, landfills, industrial facilities, dry cleaners, and gas stations, etc., associated with the Project Site or surrounding area?
    UNKNOWN
11. Are you aware of any previous environmental assessments conducted for the Project Site? If so, can you provide a copy for review?
    UNKNOWN
12. Are you aware of any current or historical environmental liens or consent orders issued by a government agency associated the Project Site?
    UNKNOWN

1.0 Summary

The purpose of this *environmental site assessment (ESA)* is to determine if the Appleton Mill Project Site (including improvements) is subject to *recognized environmental conditions*, with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. The current ESA by Cushman Enterprises, LLC (CE) was designed to evaluate existing or potential *recognized environmental conditions* associated with the Appleton Mill Project Site located west of Appleton Street, east of Glenn Street, and North of Whitner Street, in Anderson, South Carolina. The legal description for the Site is located in Section 16.4 and lists the Site as 34.59 acres with an address of "500 GLENN ST". From 1902 until 1985, the Appleton Mill Project Site was a textile mill that produced fabrics for both clothing and commercial uses.

Through a limited interview with representatives of the current property owner, an inspection for Asbestos Containing Materials (ACM) was conducted on February 3, 2003. No previous Phase I Environmental Site Assessments are known to have taken place or were available for review.

None of the immediately adjacent properties showed evidence identifying the likelihood of past uses having led to *recognized environmental conditions* on-site.

A search of available environmental records was conducted by Cushman Enterprises, LLC, (CE) and Environmental Data Resources, Inc. (EDR). The Federal and State environmental databases did indicate the presence of current facilities or sites located within a 1-mile radius of the project site. The records included eight (8) State and Local Records for hazardous wastes, groundwater contamination, leaking underground storage tanks, and coal/gas sites. There were duplicate sites, which have more than one or more recognized environmental condition. Only one site was at equal elevation to the site, while the remaining sites were down gradient.

State and Local Records State Hazardous Waste Site:

1. Anderson Mill Site 354 Railroad Circle

GWIC: Groundwater Contamination Inventory Cases.

1. Tri-County Ice & Fuel Co 4287 Spruill Ave
2. Kayo Service Station (Jet) PO Box 957 2502 Hwy 25S

LUST: The Leaking Underground Storage Tanks.

1. Tri-County Ice & Fuel Co 4287 Spruill Ave
2. Jerald Radiator 1705 W Whitner St
3. Smiths Service Station 1716 W Whitner St
4. Spinx 106 1717 W Whitner St

Former Manufactured Gas (Coal Gas) Sites:

1. Anderson Gas Co. 517 Fair St.

CE has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the Appleton Mill Site, located at 500 Glenn Street in Anderson, South Carolina. No exceptions to, or deletions from, this practice are located in this *report*. This assessment has revealed evidence of *recognized environmental conditions* in connection with the *property* and includes the following:

The Site is equal to and higher in elevation to the surrounding area and it may have involved the use, treatment, storage, or disposal of hazardous and petroleum materials. The site may pose an environmental concern regarding migration of *recognized environmental conditions* to off-site, lower elevation areas.

Possible asbestos and lead based paint containing materials were found on-site, and may include the debris piles of insulation materials, roofing shingles, floor tiles, ceiling tiles, and painted steel, brick, and masonry materials typical of construction during the early 20th century.

Based on these findings, CE, as the *environmental professional*, recommends an additional appropriate investigation, to detect the presence of *hazardous substances* or *petroleum products* within the debris piles and disposal/storage areas of *recognized environmental condition*. This opinion is only provided regarding the identified *recognized environmental conditions*. A *Phase I Environmental Site Assessment* which includes such an opinion by the *environmental professional* does not render their assessment incomplete.

The ESA is limited by certain environmental conditions including those that are practically reviewable and the extent of physical obstructions including existing structures, ecological barriers, buildings/facilities, and paved sites. As such, certain environmental conditions may not be identified within the general scope of the Phase I ESA, which may be identified by a Phase II or other assessment activity.

2.0 Introduction

Anderson County, South Carolina requested an *environmental site assessment (ESA)* be performed by Cushman Enterprises, LLC (CE) to determine if the Appleton Mill Project Site (Site), including improvements, is subject to *recognized environmental conditions*, with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. The current ESA by Cushman Enterprises, LLC (CE) was designed to evaluate existing or potential *recognized environmental conditions* associated with the Appleton Mill Project Site located west of Appleton Street, east of Glenn Street, and North of Whitner Street, in Anderson, South Carolina. The ESA is limited by the extent of physical obstructions including existing structures, ecological barriers, buildings, asphalt and other paved sites, as well as availability of appropriate land use records. As such, there may be certain environmental conditions that could not be identified within the general scope of the Phase I Environmental Site Assessment. CE has concluded that the current ESA is reliable within the general limitations described in ASTM guidelines and is valid for a period of *180 days* from the date of the report.

2.1 Purpose

The purpose of this and any *environmental site assessment (ESA)* is to determine if a particular parcel of real *property* (including improvements) is subject to *recognized environmental conditions*, with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. The term *recognized environmental conditions* means the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

2.2 Detailed Scope-of-Services

The current ESA by Cushman Enterprises, LLC (CE) was designed to evaluate existing or potential *recognized environmental conditions* associated with the northern (developed) portion of the Appleton Mill Project Site, located west of Appleton Street, east of Glenn Street, and North of Whitner Street, in Anderson, South Carolina, at the request of Anderson County Government (the Client). The scope of the project was recently relayed to CE via a request for proposal from Jeff Ricketson of Anderson County, SC. The property will require the assessment of any potential *recognized environmental conditions* on the northern (developed) portion of the Site. The current ESA addresses environmental concerns associated with the Site with regards to hazardous substances, petroleum products, fuel or heating oil storage and use, solid waste and storm water/wastewater processing, chemical storage and handling, PCBs, and (if requested) asbestos and/or lead-based paints, or other sources of contamination associated with the project site. The current ESA also addresses ASTM environmental assessment guidelines and requirements as outlined in their site assessment protocol.

2.3 Significant Assumptions

For purposes of this assessment, a *recognized environmental condition* will be the presence of or evidence or prior use and storage of hazardous substances or petroleum products, which constitute a threat to human health or the environment. A *recognized environmental condition* will be the likely presence of these substances.

2.4 Limitations and Exceptions

The information presented herein, follows the format of ASTM Standard Practice for Environmental Site Assessments: Phase I, Designation E1527-05 and is therefore limited to the scope of that standard practice.

The application of the ASTM guidelines is limited to certain environmental conditions that may exist on the property and that are practically reviewable. This approach is site-specific in that it relates to the assessment of *recognized environmental conditions* on a specific parcel of commercial real estate. As such, this practice does not specifically address additional issues in the transaction such as business entities or assets that may involve environmental liabilities. No ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a parcel. However, proper application is intended to reduce this uncertainty. Appropriate inquiry does not imply exhaustive assessment of clean property as there is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information.

Finally, the ESA is limited by the extent of physical obstructions including existing structures, ecological barriers, buildings, asphalt and other paved sites, as well as availability of appropriate land use records. As such, there may be certain environmental conditions that could not be identified within the general scope of the Phase I Environmental Site Assessment. The current ESA should be considered comprehensive and reliable in its scope within the limitations described. General limitations and basis of review, including limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt, or other paved areas, and limiting conditions (for example, snow, rain). An evaluation of the "business risk issues," such as the presence of other constituents of potential environmental concern (such as asbestos, radon and mold/fungi), associated with the site is considered beyond the scope of this assessment.

2.5 Special Terms and Conditions

No Special Terms or Conditions have been agreed upon or applied to this ESA between CE and the Client.

2.6 User Reliance

Based on the ASTM guidelines, an *environmental professional* is not required to verify independently the information provided but may rely on information provided unless he or she has *actual knowledge* that certain information is incorrect or unless it is *obvious* that certain information is incorrect based on other information obtained in the *Phase I Environmental Site Assessment* or otherwise actually known to the *environmental professional.*

The current Phase I Environmental Site Assessment was prepared under the guidelines provided by ASTM. The results of the records review, on-site inspection, and interviews are considered to be reliable within the general limitations described by ASTM guidelines. The records review, on-site inspection, and interviews were conducted in concert with each other and support the findings and conclusions. Since there is no knowledge or reason to believe that any of the information is incorrect, CE has concluded that the current ESA is reliable within the general limitations described in ASTM guidelines and is valid for a period of *180 days* from the date of the report.

3.0 Site Description

3.1 Location and Legal Description

The physical location of the Site lies north of W. Whitner St., east of Glenn St., and west of Appleton Street in the city of Anderson, South Carolina. The Anderson County Register of Deeds Office lists the Site under Deed Book 3590, Page # 00228 and is described as "PR 1+7 GLENN ST 34.59 AC" with an address of "500 GLENN ST". The legal description for the Site is located in Section 16.4. The property is shown in Figure 1.

3.2 Site and Vicinity General Characteristics

The site and its immediate vicinity are located on topographic ridges that gently slope, northeast to southwest, to low-lying drainages, which flow to Dye Creek and Whitner Creek. A 1-mile radius from the site indicates a north to south slope beginning at 809 feet (ft.) above sea level and ending at 693 ft. above sea level, with an east to west formation of topographic ridges, varying in elevation from 799 to 710 ft. above sea level. The site is at 736 ft. above sea level, and currently lies in a topographically low area that spans the width of the site from east to west, with ridges at the north, east, and west portions of the site. A United States Geological Survey (USGS) Topographic Map is included in Section 16.4 as Figure 2.

3.3 Current Use of the *Property*

The site is currently vacant with piles of demolition debris that were formed after a fire on December 31, 2001.

3.4 Descriptions of Structures, Roads, Other Improvements on the Site (including heating/cooling system, sewage disposal, source of potable water)

Existing structures include remains of a fire on December 31, 2001 at the textile mill facility. Of the original structures (which includes a Carding Facility, Cotton Warehouses, a Picking Facility, Dying Rooms, Weaving Rooms, Boiler Rooms, a Smoke Stack, Supply Warehouses, Shipping Area, a Storage Shed, a Main Office, and a Water Pump House) only the Boiler Rooms, the Smoke Stack, elevated foundations for the west side Cotton Warehouses, a Storage Shed, a Main Office, and a Water Pump House were still standing. Foundations for the demolished structures were still in place, with some areas obstructed from view due to the piles of demolition debris.

The site is provided both water and sewer supply through the City of Anderson. The supply systems appeared intact and not in use by the site.

Roadway access to the site includes access points from both Appleton Street and Glenn Street, with gated vehicular access at Glenn Street, to the north of the site, and at Appleton Street, to the southeast of the site. These roadways provide access to the Carding Building, Cotton Warehouses, and Weaving Building.

One roadway exited the site to the south, which was beyond the scope of this investigation. This roadway leads to an adjacent parcel to the south, which was the primary source for water to the site through four groundwater wells, prior to the site's integration with the City of Anderson's water supply.

Along the west side of the subject property, one railroad spur reached north to south. This railroad was used in transportation of materials to and from the mill. The railroad spur adjoined an existing railroad in the northern section of the property.

3.5 Current Uses of the Adjoining Properties

The adjoining properties are of the historic mill community, used for residential purposes. The current uses include both residential, greenspace, and commercial purposes. Numerous homes along the east side of the property are either abandoned, in disrepair, or affected by fire.

4.0 User Provided Information

4.1 Title Records

The User provided to CE information stating that the project is recorded with Anderson County Register of Deeds Office, under Deed Book 3590, Page # 00228. CE reviewed the information available at the Anderson County Register of Deeds Office and included the information in Sections 3.1 and 16.4.

4.2 Environmental Liens or Activity and Use Limitations

No Environmental Liens or Activity and Use Limitations were relayed to CE regarding the property.

4.3 Specialized Knowledge

Through interviews with representatives of the current property owner, an inspection for Asbestos Containing Materials (ACM) was conducted on February 3, 2003. Based on information in this report, several visible and accessible areas were found to contain non-friable ACM. Recommendations for the removal of the visible and accessible non-friable ACM were made and on February 6, 2003, all visible non-friable ACM had been placed in a disposal container.

No such container was found on-site, and the fate of the non-friable ACM is not known. The original information provided to CE is provided in Section 16.6.

4.4 Commonly Known or Reasonably Ascertainable Information

On December 31, 2001, the Site suffered a fire and was subsequently demolished thereafter. No other Commonly Known or Reasonably Ascertainable Information was relayed to CE regarding the property.

4.5 Valuation Reduction for Environmental Issues

No Official Valuation Reduction for Environmental Issues was relayed to CE regarding the property. During an interview with Mr. Jeff Ricketson, of Anderson County's Division of Planning, it was noted that the debris piles on-site reduced the value of the property, but with no mention as to the environmental nature of the debris or its affects on the current value.

4.6 Owner, Property Manager, and Occupant Information

The owner of the property is Appleton Property, LLC, 990 Fifth Avenue, New York, NY 10021. The property Manager is Itzhak Djemal. There are no current occupants of the site, per information relayed to CE.

4.7 Reason for Performing *Phase I*

The purpose of this *environmental site assessment (ESA)* is to determine if the Appleton Mill Project Site (including improvements) is subject to *recognized environmental conditions*, with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. The current ESA by CE was designed to evaluate existing or potential *recognized environmental conditions* associated with the Appleton Mill Project Site, located west of Appleton Street, east of Glenn Street, and North of Whitner Street, in Anderson, South Carolina. To the best knowledge of CE, the user has requested the performance of the Phase I prior to the acquisition of a portion or all parts of the property.

4.8 Other

No other user provided information was relayed to CE regarding the property.

5.0 Records Review

5.1 Standard Environmental Record Sources

A search of available environmental records was conducted by Cushman Enterprises, LLC, (CE) and Environmental Data Resources, Inc. (EDR). The report meets the minimum government records search requirements of EPA's Standards and Practices for All Appropriate Inquiries, 40 CFR Part 312 (AAI) and the ASTM Standard Practice for Environmental Site Assessments, E 1527-05. Table 1 lists the sources sought to obtain and review records that would help identify *recognized environmental conditions* in connection with the *property*.

5.2 Additional Environmental Record Sources

No additional Environmental Record Sources were found, outside of the information received from the current property owner, as discussed in Section 4.3.

5.3 Physical Setting Source(s)

Sources for the physical setting include EDR's GeoCheck Physical Setting Source Addendum (Section 16.5), USGS Topographic Map (Anderson North, Topographic – metric, 1:24000 scale, 1983), The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) Soil Maps (Anderson County, South Carolina, pages 30 & 38, 1979), and South Carolina Department of Health and Environmental Control (SCDHEC) groundwater well information database (SCDHEC, 2005).

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with EPA's Standards and Practices for All Appropriate Inquiries (AAI) and ASTM E 1527-05, Section 8.2.3. Section 8.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of *recognized environmental conditions* in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

According to ASTM E 1527-05, Section 8.2.2, "To enhance and supplement the standard environmental record sources in 8.2.1, local records and/or additional state or tribal records shall be checked when, in the judgment of the environmental professional, such additional records (1) are reasonably ascertainable, (2) are sufficiently useful, accurate, and complete in light of the objective of the records review (see 8.1.1), and (3) are generally obtained, pursuant to local good commercial or customary practice, in initial environmental site assessments in the type of commercial real estate transaction involved." One of the records sources listed in 8.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

These sources were researched and used for the evaluation of existing or potential *recognized environmental conditions* associated with the Appleton Mill Project Site.

5.4 Historical Use Information on the *Property*

The objective of consulting historical sources is to develop a history of the previous uses of the *property* and surrounding area, in order to help identify the likelihood of past uses having led to *recognized environmental conditions* in connection with the *property*. All *obvious* uses of the *property* were identified from the present back to the *property's* first developed use, as practicable, using the *standard historical sources* that are *reasonably ascertainable* and likely to be useful. Data failure occurred for certain sources before the year 1929, in that the sources were reviewed and yet the objectives of identifying the likelihood of past uses having led to *recognized environmental conditions* were not met, due to a lack of information.

From 1902 until 1985, the Appleton Mill Project Site was a textile mill that produced fabrics for both clothing and commercial uses. In 1985, the Mill industry suffered economic hardship and the Appleton Mill ceased production activities and remained vacant. In 2001, the mill suffered a fire and a majority of the site was demolished. At the time of this report, the site was covered with numerous demolition debris piles, unoccupied, and was found with few freestanding structures remaining intact.

Sanborn Fire Insurance maps indicate an expansion of the facilities on the project site between the years of 1925 and 1948. At that time, additional storage, dying, warehouse, and parking facilities were added to the northern portion of the site. Field observations confirmed the historic presence of these structures (Section 16.3).

City Directories available for Anderson, SC were available from the years 1929 to 2003. In 1929, the site was listed as a "New Settlement" and included the surrounding residential area as a "Mill Village". Because the project site is beyond the city limits, no tangible street address was available for the site until 2000. Between 1936 and 1990, the project site was described as "A mill village in northwest section, reached by Glenn Street". In 1995, the project site was listed as "a mill village located west of 'I' Street and north of W. Whitner Street. Zip Code 29621." In 2000, the property was listed as "500 Glenn Street. Gelmart Industries. Women's and Children's Clothing." In 2003, there was no listing for the property.

Historical Aerial photographs were reviewed for the years until 1965, where the site remained unchanged.

The following information was found within an April 5, 2002 report titled "Five Anderson Mills", completed by the Anderson County Planning Services, a department of the Anderson County Division of Planning.

> "All historical records indicate that Brogan Mills was once a part of the upward turn in labor-intensive employment, and became another part of a strong pattern set by cotton mill investors in South Carolina. Chartered in 1902 and put into operation in 1904, records show that there were 600 mill employees at that time, and the mill village population included 1,200 people. Historical records also show that Brogan Mill officially became Appleton Mill in August 25, 1925, and was sold again in 1950 to the J.P. Stevens & Company, Inc. Industrial growth for Appleton Mill took place during a period of time when agricultural jobs were beginning to decline in Anderson County, and many leaders succeeded with cotton mills by risking their own capital funds.
>
> In the beginning, sufficient housing for mill workers was scarce, and walking was about the only means of getting to work. As a part of their purchase from Brogan Mill, the Appleton Mill realized the need to purchase *"all land, being 158 acres, more or less, together with the mill village and mill.* "While the kind of housing in mill villages may seem primitive by many of today's housing standards, many people who were farmers outside of the villages were living in much worse conditions.
>
> Appleton Mill was later purchased by J.P. Stevens, Inc., and although an integral part of the Anderson County community, J.P. Stevens was still known by most everyone as the "Appleton" mill. It wasn't long that J. P. Stevens could no longer survive economically, and modern technology and foreign labor soon forced the mill to close indefinitely in 1985. The mill began to decay from lack of concerned ownership, and like most other old mills the old "Appleton Mill" physically declined to the point of no return.
>
> At approximately 11:30 PM on the cold and clear, New Year's Evening of December 31, 2001, neighbors of the already crumbling Appleton Mill / J.P. Stevens Plant began to notice flames billowing out of the decaying buildings. Like most mills in operation in their early beginnings, they usually sprayed linseed oil on the wooden floors in order to control the cotton mill dust concentration. The petroleum soaked wooden interiors, were prime fuel for the rampaging fire that gutted and destroyed any and all community hopes of ever seeing the once thriving industrial icon of being revitalized for any other land use. Anderson County Fire Department records show that it required 100 firefighters, and 15 hours to bring the fire under control. Along with the economic loss created by modern technology, this catastrophic fire event was the final blow to the Appleton Mill community.

Cleaning up the destroyed mill will require adhering to strict rules set by the State Department of Health and Environmental Control (DHEC), because of the likelihood of such contaminates as asbestos on the site. According to an updated newspaper article in the ***Anderson Independent-Mail*** on January 23, 2002, the *"New York-based owners of the mill property are now planning to clean up the site and build approximately 130 homes on the Appleton Mill Property."*

Already extinct as a "mill community," 1990 the Census showed that the population count within the Appleton Mill area (see Map 3, page 18) was 2,103 people. In the latest 2000 Census count however, the population had dropped to 1,805, which was a net loss of 12%, or minus 298 people over the past ten years. When surveying 92 properties surrounding the mill site, there were only 42% inhabited by property owners, and the rest are being used as rental properties or have been abandoned.

The Appleton Mill site is shown to be 35.9 acres in February 2002, according to the Anderson County Tax Assessor's Office. The last residential market value assessment was taken in 1997, and shows that land values within the Appleton Mill community range from $2,000 to $3,500. Land with buildings, however, range from $8,500 to $45,200. This contrast could indicate a major variation in building sizes, and/or that the buildings are either in good or poor structural condition. Unfortunately, the recent fire totally destroyed most of the actual mill site's remaining retail value."

No other information for the historical uses of the property was made available to CE.

5.5 Historical Use Information on Adjoining Properties

Historical uses of the adjoining properties were researched using the same sources listed in Section 5.4. As previously stated, in 1929 a mill community was established for the workers of the Appleton Mills Site. Throughout the years of the mill's operation, the surrounding community grew into residential uses with few commercial uses. At the date of this report, 74 properties were immediately adjacent to the Appleton Mill Project Site, where 70 had an average size of 0.25-acres. Four of the properties were of 1-acre or greater, two of which are local community churches, one of which is a residential property, and one which is currently in commercial use. None of the immediately adjacent properties showed evidence identifying the likelihood of past uses having led to *recognized environmental conditions* on site.

All properties immediately adjacent to the project site are listed in Section 16.4.

5.6 Orphan Site Information

A list of sites known to be of potential *recognized environmental conditions* but with inadequate information for review and/or for site reconnaissance (known as "orphan sites") is included in Section 16.5 of this report.

6.0 Site Reconnaissance

6.1 Methodology and Limiting Conditions

The periphery of the property was visually and physically observed, as well as the periphery of all standing and collapsed structures on the property, and the property was viewed from all adjacent public thoroughfares for the presence and/or storage of *hazardous substances* or *petroleum products*. No roads or paths with apparent outlets ("dead ends") were observed on the property. On the interior of standing structures on the property, accessible common areas expected to be used by occupants or the public (such as lobbies, hallways, utility rooms, recreation areas, etc.), maintenance and repair areas, boiler rooms, and demolished structures were visually and physically observed.

The method used to observe the property included transects along the interior of the property, perimeter transects, selective observations along remaining and demolished structure boundaries/walls, and photography of the entire site at various locations.

The interior of the free-standing structures were observed for the presence and/or storage of *hazardous substances* or *petroleum products*.

6.2 General Site Setting

The site is located on topographic ridges, situated on a northeast to southwest slope, up to 1,670 feet long by 1,000 feet wide at its maximum, that gently slope to low-lying drainages, flowing to Dye Creek and Whitner Creek. A 1-mile radius from the site indicates a north to south slope beginning at 809 feet (ft.) above sea level and ending at 693 ft. above sea level, with an east to west formation of topographic ridges, varying in elevation from 799 to 710 ft. above sea level. The site is at 736 ft. above sea level, and currently lies in a topographically low area that spans the width of the site from east to west, with ridges at the north, east, and west portions of the site. A United State Geological Survey (USGS) Topographic Map is included in Section 16.4 as Figure 2.

The site is surrounded on all sides by residential structures, two churches to the north on Rogers St. and Pope Drive, and one commercial facility to the south on W. Whitner St. The site location is described in Section 3.1.

6.3 Exterior Observations

The exterior of the site was found to be demolished with few standing structures. Of the original structures (includes a Carding Facility, Cotton Warehouses, a Picking Facility, Dying Rooms, Weaving Rooms, Boiler Rooms, a Smoke Stack, Supply Warehouses, Shipping Area, a Storage Shed, and a Water Pump House) only the Boiler Rooms, the Smoke Stack, and elevated foundations for the west side Cotton Warehouses were still standing. Foundations for the remaining structures were still in place, with some areas.

6.4 Interior Observations

Interior observations of intact structures (Boiler rooms, Pump House, and Storage Shed) showed evidence of historical uses of petroleum products and potentially hazardous products, as discussed in Section 8.0. These areas are not expected to be used by occupants or the public.

7.0 Interviews

Interviews were conducted per the ASTM E 1527-05 User Questionnaire and attached in Section 16.6.

7.1 Interview with Owner

An interview with the current project manager, Itzhak Djemal, of the Appleton Property LLC (990 Fifth Avenue, New York, NY 10021), provided limited to no information on the property. The information received regarding the Site was limited to an asbestos survey and disposal recommendations, as discusses in Section 4.3. Mr. Djemal stated that he had recently (November 2005) taken over site management responsibilities. He requested that CE contact the original site manager, Mr. Sergio Kivilevich.

7.2 Interview with Site Manager

Mr. Kivilevich was contacted regarding an Interview and User Questionnaire. He refused an interview and requested a fax of the User Questionnaire on December 2, 2005. The information received regarding the site was limited to the address of the Site, listed as "100 Appleton Street, G, Anderson, SC 29625." A copy of the User Questionnaire, received January 2, 2006, is attached at the end of this report.

7.3 Interviews with Occupants

No occupants were at the site or are known to be at the site.

7.4 Interviews with Local Government Officials

Mr. Jeff Ricketson, of the Anderson County Division of Planning was contacted regarding an Interview and User Questionnaire. Mr. Ricketson provided information for the User Questionnaire.

7.5 Interviews with Others

No other individuals were available for Interviews.

8.0 Findings

The purpose of this *environmental site assessment (ESA)* is to determine if the Appleton Mill Project Site (including improvements) is subject to *recognized environmental conditions*, with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. The current ESA by Cushman Enterprises, LLC (CE) was designed to evaluate existing or potential *recognized environmental conditions* associated with the Appleton Mill Project Site located west of Appleton Street, east of Glenn Street, and North of Whitner Street, in Anderson, South Carolina. At the request of the User, only the developed portion of the site was investigated.

The ESA is limited by the extent of physical obstructions including existing structures, ecological barriers, buildings, asphalt and other paved sites, as well as availability of appropriate land use records. As such, there may be certain environmental conditions that could not be identified within the general scope of the Phase I Environmental Site Assessment. CE has concluded that the current ESA is reliable within the general limitations described in ASTM guidelines and is valid for a period of *180 days* from the date of the report.

Opinions on the findings of this Phase I ESA are included in Section 9.0

The legal description for the Site is located in Section 16.4 and lists the Site as 34.59 acres with an address of "500 GLENN ST". The property is shown in Figure 1.

From 1902 until 1985, the Appleton Mill Project Site was a textile mill that produced fabrics for both clothing and commercial uses. At the time of this report, the site was covered with numerous demolition debris piles due to a fire on December 31, 2001, unoccupied, and was found with few freestanding structures remaining intact. Only the Boiler Rooms, the Smoke Stack, elevated foundations for the west side Cotton Warehouses, a Storage Shed, a Main Office, and a Water Pump House were still standing. Foundations for the demolished structures were still in place, with some areas obstructed from view due to the piles of demolition debris.

Research of historical uses of the adjoining properties showed the surrounding community as residential with few commercial uses. At the date of this report, all immediately adjacent properties were residential, with two churches and one commercial property. Numerous homes along the east side of the property are either abandoned, in disrepair, or affected by fire. None of the immediately adjacent properties showed evidence identifying the likelihood of past uses having led to *recognized environmental conditions* on-site.

The periphery of the property was visually and physically observed, as well as the periphery of all standing and collapsed structures on the property, and the property was viewed from all adjacent public thoroughfares for the presence and/or storage of *hazardous substances* or *petroleum products*.

An interview with the current project manager, Itzhak Djemal, of the Appleton Property LLC (990 Fifth Avenue, New York, NY 10021), provided limited to no information on the property. The information received regarding the Site was limited to an asbestos survey and disposal recommendations, as discussed in Section 4.3. No such container was found on-site, and the fate of the non-friable ACM is not known. The original information provided to CE is provided in Section 16.6. Mr. Djemal stated that he had recently (November 2005) taken over site management responsibilities. He requested that CE contact the original site manager, Mr. Sergio Kivilevich. Mr. Kivilevich was contacted on December 2, 2005. He submitted information regarding the property address.

No occupants are known for the site, nor were any available for an interview. Mr. Jeff Ricketson, of the Anderson County Division of Planning was contacted regarding an Interview and User Questionnaire. Mr. Ricketson provided information for the User Questionnaire, which relayed an unofficial decrease in value for the property (due to demolition debris), reason for the Phase I ESA, and obvious indicators of *recognized environmental conditions*.

A search of available environmental records was conducted by Cushman Enterprises, LLC, (CE) and Environmental Data Resources, Inc. (EDR). The report meets the minimum government records search requirements of EPA's Standards and Practices for All Appropriate Inquiries, 40 CFR Part 312 (AAI) and the ASTM Standard Practice for

Environmental Site Assessments, E 1527-05. Review of pertinent Federal and State records regarding the potential environmental concerns include, but are not limited to, NPL Listings, RCRA CORRACTS and RCRA Permitted TSD Facility Listings, CERCLIS/NFRAP Listings, ERNS Listings, State Equivalent SPL Listings, Registered UST and LUST Facilities, State Waste Landfills, Incinerators, or Transfer Stations Listings, and RCRA Generators Listings. The Federal and State environmental databases did indicate the presence of current facilities or sites located within a 1-mile radius of the project site.

Eight (8) State and Local Records were found for sites within a 1 mile radius of the property. The records included those for hazardous wastes, groundwater contamination, leaking underground storage tanks, and coal/gas sites. There were duplicate sites, which have more than one or more recognized environmental condition. Only one site was at equal elevation to the site, while the remaining sites were down gradient. The records listed are:

State and Local Records State Hazardous Waste Site: South Carolina uses the federal CERCLIS list in place of a state hazardous waste site list. The Comprehensive Environmental Response, Compensation and Liability Information System contains information on sites identified by the United States Environmental Protection Agency as abandoned, inactive or uncontrolled hazardous waste sites that may require cleanup. The data is provided from the United States Environmental Protection Agency. A review of the SHWS list, as provided by EDR, has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

2. Anderson Mill Site 354 Railroad Circle

GWIC: Groundwater Contamination Inventory Cases. Any site that has groundwater contamination over a federal MCL. A review of the GWIC list, as provided by EDR, and dated 07/01/2004 has revealed that there are 2 GWIC sites within approximately 0.5 miles of the target property.

3. Tri-County Ice & Fuel Co 4287 Spruill Ave
4. Kayo Service Station (Jet) PO Box 957 2502 Hwy 25S

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data comes from the Department of Health & Environmental Control's Leaking UST list. A review of the LUST list, as provided by EDR, and dated 10/07/2005 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

5. Tri-County Ice & Fuel Co 4287 Spruill Ave
6. Jerald Radiator 1705 W Whitner St
7. Smiths Service Station 1716 W Whitner St
8. Spinx 106 1717 W Whitner St

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. A review of the Coal Gas list, as provided by EDR, has revealed that there is 1 Coal Gas site within approximately 1 mile of the target property.

2. Anderson Gas Co. 517 Fair St.

The information obtained during the site reconnaissance indicated *recognized environmental conditions* for the Site. Through a limited interview with representatives of the current property owner, an inspection for Asbestos Containing Materials (ACM) was conducted on February 3, 2003. No previous Phase I Environmental Site Assessments are known to have taken place or were available for review.

The on-site inspection identified potential sources for the improper use, treatment, storage, generation, or disposal of hazardous and petroleum substances that may have resulted in possible *recognized environmental conditions* on the project site. There were several apparent sheens and/or soil discolorations associated with the project site. Opened

five (5) gallon buckets were visually observed, which may contain petroleum/hazardous substances, including lacquer thinner. Six (6) abandoned above ground storage tanks were found, with areas of stained soils, some with petroleum based odors. Three (3) empty fifty-five (55) gallon drums were found scattered throughout the site, with opened tops and stained soils around the periphery. The vegetation surrounding these areas was mainly of waste-place vegetation, shrubs, and grasses. Most of the vegetation appeared healthy and unstressed within areas of bare soil, where *recognized environmental conditions* are evident.

There were power transmission lines with transformers that ran parallel to the Appleton Mill Site. No PCB's were determined to be located within the transformer equipment, through interview with Duke Power, the electrical service provider for the Site. There were no leaking transformers identified on, or adjacent to the project site. Water and sewer services are currently supplied to the project site by the city of Anderson.

Possible asbestos and lead based paint containing materials were found on-site, and may include the debris piles of insulation materials, roofing shingles, floor tiles, ceiling tiles, and painted steel, brick, and masonry materials typical of construction during the early 20th century.

9.0 Opinion

The Phase I Environmental Site Assessment was prepared under the guidelines and protocol provided by the ASTM standards. As such, the results of the site background/operating history, on-site inspection, databases/records review, and interviews are considered sufficient in scope and detail to be reliable within the general limitations described by these guidelines. The Site's background/operating history, on-site inspection, records review, and interviews were conducted in concert with each other and support the findings and conclusions. Since there is no knowledge or reason to believe that any of the information is incorrect, CE has concluded that the current ESA is reliable within the limitations described by ASTM.

The following statement is representative of the opinion of CE regarding *recognized environmental conditions* in connection with the Appleton Mill Site:

The current Phase I Environmental Site Assessment, in conformance with the scope and limitations of ASTM guidelines, has revealed visual and physical evidence of *recognized environmental conditions*, which includes both petroleum and hazardous substances, in connection with the Appleton Mill Site, an approximately 34.59-acre tract. The *extent* of these *recognized environmental conditions* is not known, nor is it the scope or intent of this ESA to provide such findings, as per the EPA's Standards and Practices for All Appropriate Inquiries, 40 CFR Part 312 (AAI) and the ASTM Standard Practice for Environmental Site Assessments, E 1527-05. Only the presence or absence of such conditions is to be identified.

The environmental database search of state and local records revealed four (4) leaking underground storage tanks within a ½ mile radius, two (2) incidents of groundwater contamination within a ½ mile radius, and one (1) incident of state hazardous waste within a 1 mile radius. The Site is equal to and higher in elevation to known Federal and State Listings of sites that have involved the use, treatment, storage, or disposal of hazardous and petroleum materials. These sites are within a 1 mile radius, and the potential for migration of environmental contaminants to the site is low, and therefore not a recognized environmental condition. Although, migration of on-site *recognized environmental conditions* to off-site, lower elevation areas is relatively high.

On-site *recognized environmental conditions* include the possible asbestos and lead based paint containing materials found on-site within the debris piles of insulation materials, roofing shingles, floor tiles, ceiling tiles, and painted steel, brick, and masonry materials that are typical of construction during the early 20th century. Also, the on-site inspection identified potential sources for the improper use, treatment, storage, generation, or disposal of hazardous and petroleum substances typically used during mill operations that may have resulted in possible *recognized environmental conditions* on the project site. There were several apparent sheens and/or soil discolorations associated with the project site. Opened five (5) gallon buckets were visually observed, which indicated petroleum/hazardous substances, including motor oil, hydraulic fluid, and lacquer thinner. Six (6) abandoned above ground storage tanks were found, with areas of stained soils, some with petroleum based odors. Three (3) unidentified empty fifty-five (55) gallon drums were found scattered throughout the site, with opened tops and stained soils around the periphery. Historic records indicate that the mills used oil based products on floors to suppress cotton dust; consequently, stained flooring materials and timbers were located throughout the site and debris piles.

10.0 Conclusions

CE has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the Appleton Mill Site, located at 500 Glenn Street in Anderson, South Carolina. No exceptions to, or deletions from, this practice are located in this *report*. This assessment has revealed evidence of *recognized environmental conditions* in connection with the *property* and includes the following:

The Site is equal to and higher in elevation to the surrounding area and it may have involved the use, treatment, storage, or disposal of hazardous and petroleum materials. The site may pose an environmental concern regarding migration of *recognized environmental conditions* to off-site, lower elevation areas.

Possible asbestos and lead based paint containing materials were found on-site, and may include the debris piles of insulation materials, roofing shingles, floor tiles, ceiling tiles, and painted steel, brick, and masonry materials typical of construction during the early 20th century.

Based on these findings, CE, as the *environmental professional*, recommends an additional appropriate investigation, to detect the presence of *hazardous substances* or *petroleum products* within the debris piles and disposal/storage areas of *recognized environmental condition*. This opinion is only provided regarding the identified *recognized environmental conditions*. A *Phase I Environmental Site Assessment* which includes such an opinion by the *environmental professional* does not render their assessment incomplete.

The ESA is limited by certain environmental conditions including those that are practically reviewable and the extent of physical obstructions including existing structures, ecological barriers, buildings/facilities, and paved sites. As such, certain environmental conditions may not be identified within the general scope of the Phase I ESA, which may be identified by a Phase II or other assessment activity.

11.0 Deviations

No deviations were taken form the ASTM Guidelines within this report.

12.0 Additional Services

No additional services were requested.

16.4 Historical Research Documentation (aerial photographs, fire insurance maps, historical topographical maps, etc.)

THIS INDENTURE MADE THE 7 day of December, 1999, Between Gelmart Industries, Inc. a Delaware Corporation having offices at 31 West 34th Street New York, New York (hereinafter called the Grantor), of the one part, and Appleton Property LLC a South Carolina Limited Liability Company having an office c/o William C. Hood, Esq. 505 McDuffie Street Anderson, South Carolina 29621 (hereinafter called the Grantee), of the other part,

WITNESSETH, That the said Grantor, Gelmart Industries, Inc., for and in consideration of the sum of $10.00 and other valuable consideration lawful money of the United States of America, unto it well and truly paid by the said Grantee, at or before the sealing and delivery, hereof, the receipt whereof is hereby Acknowledged, has granted, bargained and sold, aliened, enfeofffed, conveyed, released and confirmed, and by these presents grant, bargain, sell, enfeoff, convey, alien, release and confirm unto said Grantee, its successors and assigns, all of the lot and building more particularly hereinafter described:

PARCEL NO. 1

ALL that certain piece, parcel or tract of land containing 34.3648 acres situate, lying and being in the County of Anderson, State of North Carolina, as shown on plat entitled "Property of Gelmart Industries, Inc." dated March 1989, prepared by Dalton & Neves Co., Inc., Engineers, and having, according to said plat, the following metes and bounds to-wit:

BEGINNING at the iron pin (P.O.B. No. 1) at the Northwest intersection of the rights of way of S.C. Highway No. 24 (W. Whitner Street) and Appleton Road, thence running with the Northern right of way of S.C. Highway No. 24 S, 86-08 W. 274.34 Feet to an iron pin at the northeast intersection of the rights of way of S.C. Highway No. 24 and "Y" Street; thence leaving said intersection and running along the eastern right of way of "Y" Street N. 9-54 E. 185.89 feet to an iron pin; thence leaving "Y" street and running along the rear of lots 308A, 307A, 306A, 305Aand 304A of the Appleton Company Subdivision, and the property of J.P. Stevens & Co., Inc. the following courses and distances: N. 19-25 E. 135.27 feet to an iron pin, thence N 12-48 E. 589.36 feet to an iron pin, thence running along the Stevens property and lot 302 of Appleton Company Subdivision N. 77-16 W 276.86 feet to an iron pin on the eastern right of way of York

street; thence running with the eastern right of way of York street N.7-21 E. 27.49 feet to an iron pin at the eastern intersection with Glenn Street; thence running with the eastern right of way of Glenn street the following courses and distances: N 38-51 E 127.0 feet to an iron pin, thence N. 19-20 E 90.0 feet To an iron pin, thence N 9-18 W 442.37 feet to a nail and cap, thence N 16-17 E 82.35 feet to a nail and cap, thence N 41-52 E 169.18 feet to a nail and cap, thence N 41-62 E 90.81 feet to A nail and cap, thence N. 24-54 E 237.68 feet to a nail and cap. Thence N. 17-34 E. 169.80 feet to a nail and cap, thence N. 16-24 E 109.46 feet to a nail and cap, thence N. 21-05 E. 128.20 feet. to a nail and cap, thence N. 22-12 E.86.81 feet to a nail and 34-38 E. 80.09 feet to a nail and cap, thence N. 40-08 E 89.35 feet to a nail and cap, thence N. 61-14 E. 89.21 feet to a nail and cap, thence N. 67-06 E. 130.21 feet to a nail and cap, thence, N. 88-51 E. 132.63 feet to a nail and cap, thence S. 79-49 E. 72.28 feet to an old iron pin, thence S. 78-26 E. 221.01 Feet to an old iron pin, thence S. 14-02 E. 34.09 feet to an old iron pin on the Northern right of way of "J" Street, thence running along the Northern right of way of "J" Street the following courses and distances: S. 53-55 W. 131.74 Feet to an old iron pin, thence S. 25-54 W. 72.97 feet to an old iron pin corner of Lot 90 the Appleton Company Subdivision; then leaving said "J" Street right of way and running the northern line of Lot 90 S. 81-05 W. 81.27 feet to an old iron pin, thence running along rear line of Lots 90, 89, 87, and 86 of the Appleton Company Subdivision S. 7-58 W. 375.08 feet to an old iron pin at the northwest intersection of the rights of way of Kelly and "K" Streets; thence running along the Western right of way of "K" Street the following courses and distances: S. 7-47 W. 138.13 feet to an old iron pin, thence S. 8-05 E. 576.66 feet to a nail and cap at the northwest intersection of the rights of way of "K" Street and Appleton Road, thence running with the western right of way of Appleton Road the following courses and distances: S. 80-40 W 126.22 feet to a nail and cap, thence S. 60-05 W. 56.47 feet to a nail and cap., thence S. 49-06 W. 44.93 feet to an iron pin, thence 51-48 W. 103.33 feet to an iron pin, thence S. 30-12 W. 88.19 feet to an iron pin, thence S. 26-56 W. 227.92 feet to an iron pin, thence S. 17-36 W. 601.21 feet to an old iron pin, thence S. 19-00 W. 187.59 feet to an iron pin, thence S. 16-26 W. 81.17 feet to an iron pin, thence S. 9-47 W. 84.23 feet to an iron pin, thence S. 6-52 W. 291.53 feet to the point of BEGINNING.

PARCEL NO. 2

ALL that certain piece, parcel or tract of land containing .06093 acres situate, lying and being in the County of Anderson, State of North Carolina, as shown on plat entitled "Property of Gelmart Industries, Inc." dated March 1989, prepared by Dalton & Neves Co., Inc., Engineers, and having, according to said plat, the following metes and bounds to-wit:

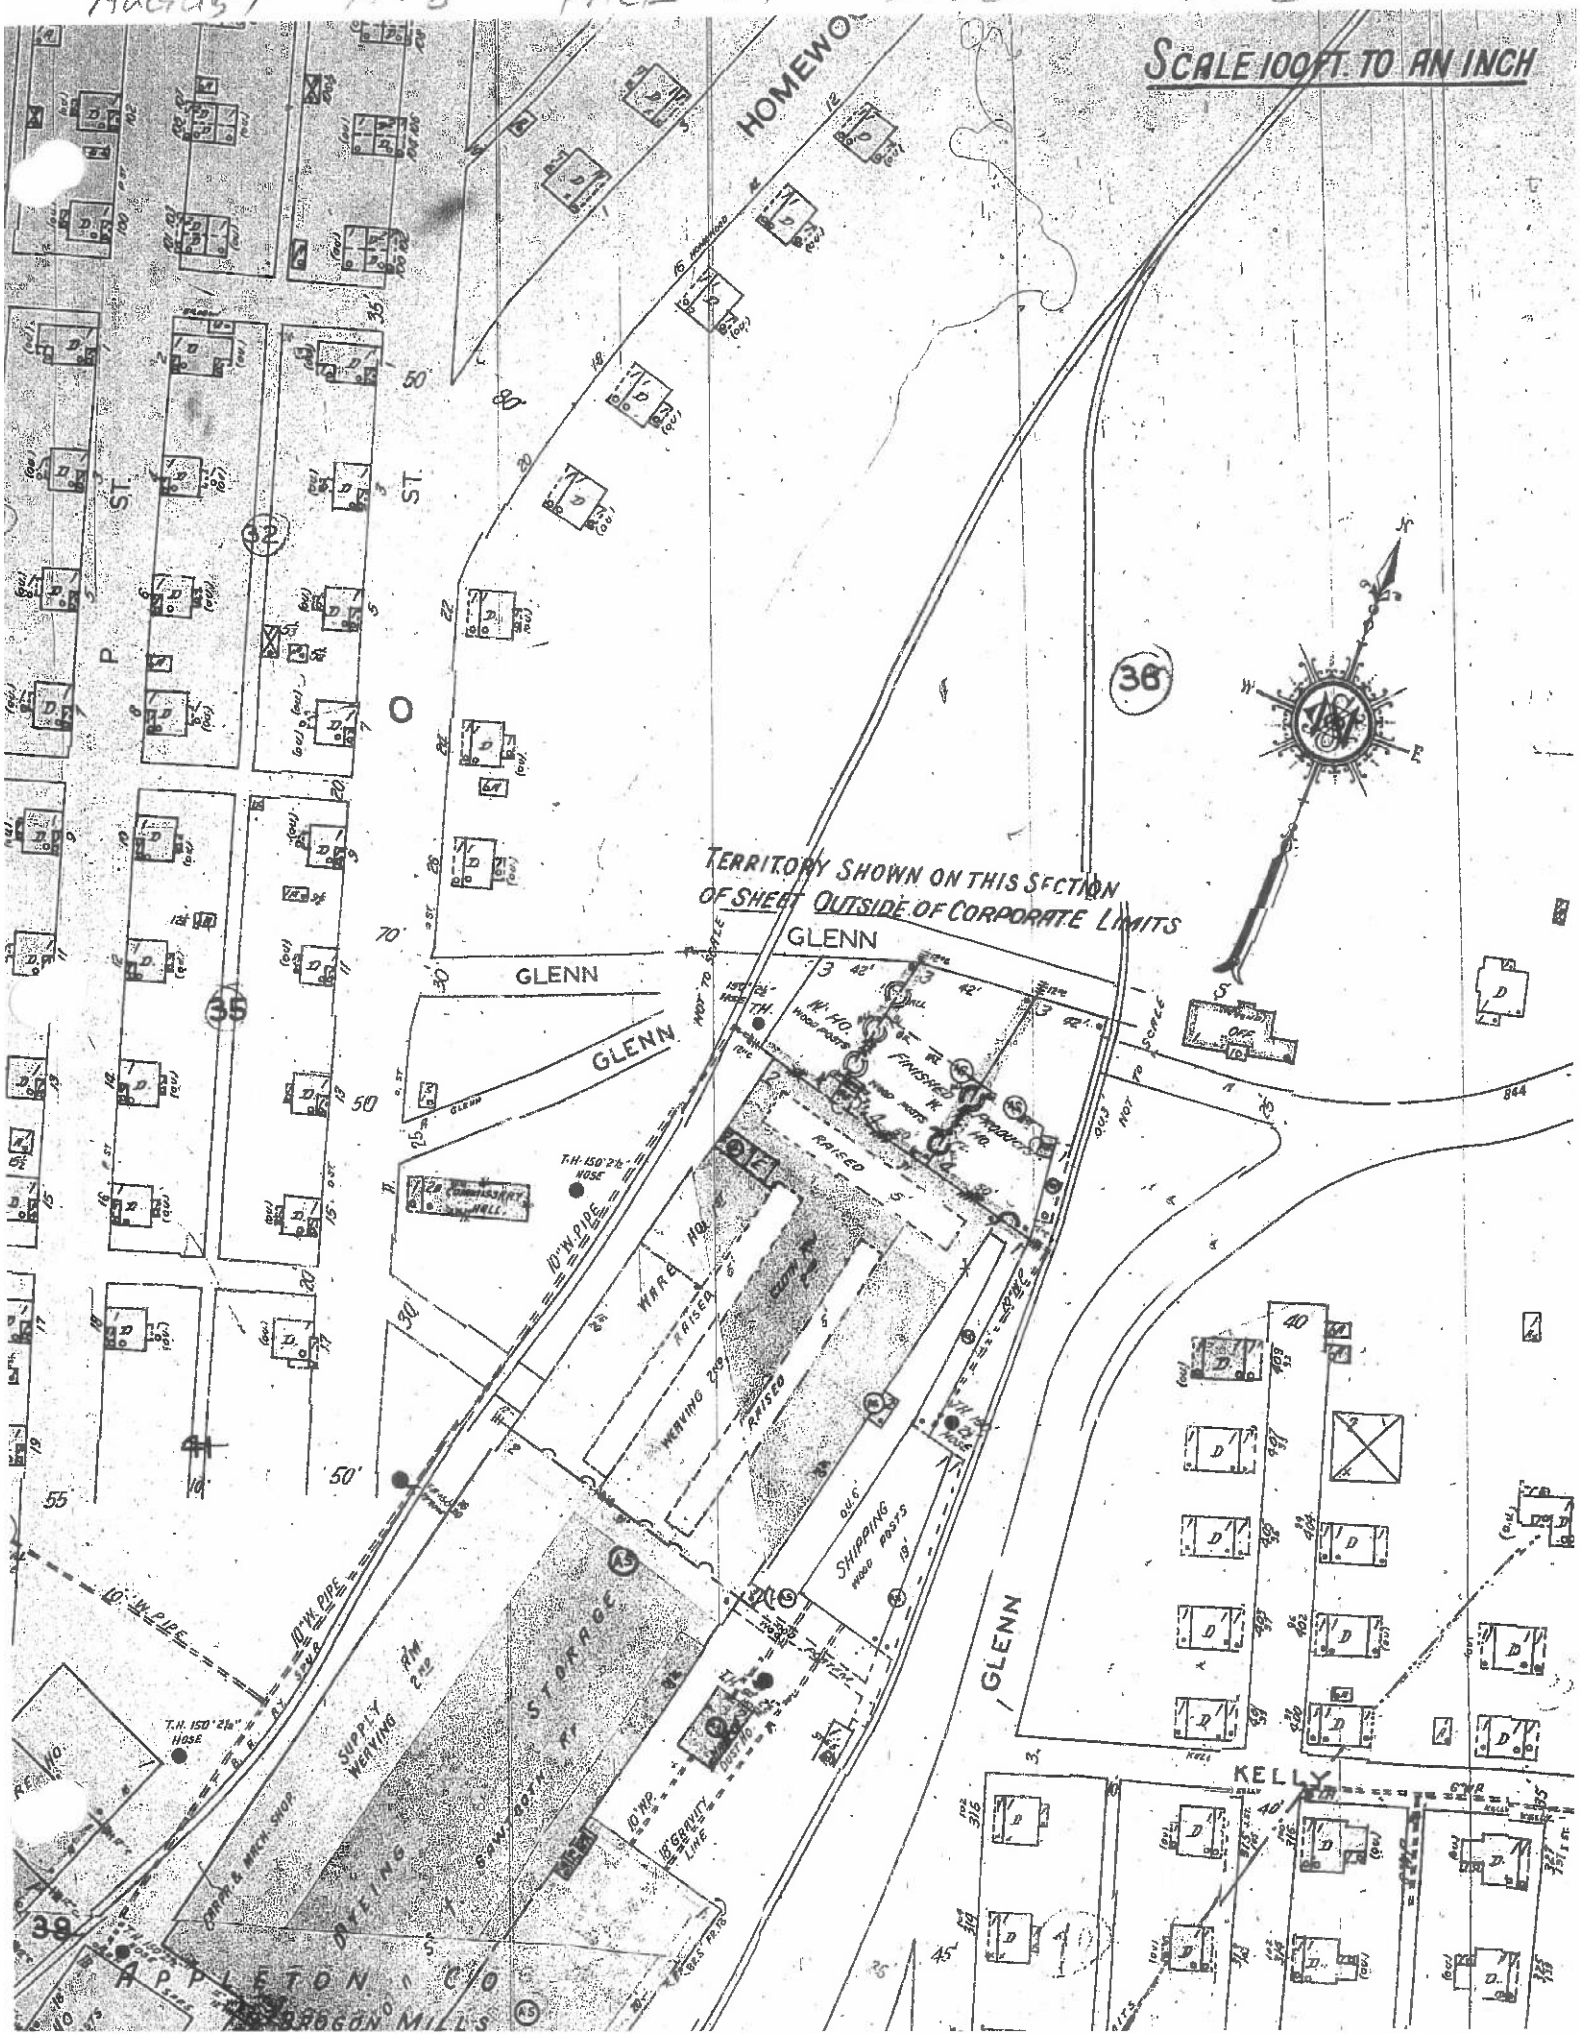
BEGINNING at a nail and cap [P.O.B. * The fee is based on the real property's value. Value means the realty's fair market value. In arm's length real property transactions, this value is the sales price to be paid in money or money's worth (e.g. stocks, personal property, other realty, forgiveness of debt, mortgages assumed or placed on the realty as a result of the transaction). However, a deduction is allowed from this value for the amount of any lien or encumbrance existing on land, tenement, or realty before the transfer and remaining on it after the transfer.

AUGUST 1948 PAGE 27 SHEET 1 OF 2



From: Cecil Clements
To: COLUMB34.GORMANAK
Date: 10/25/01 10:27am
Subject: Appleton Mill

Angela:

I visited Appleton Mill on 10/23 to determine what I could. The plant is overgrown with vegetation and fenced all around, prohibiting close access. Two large AGT are visible which may have leaked the fuel oil. The visible reaches of the creek appear clear, without obvious signs of stress.

Local spill files confirm the small fuel oil spill, described as "95% recovered" by the end of the same day.

Please call if more assistance is needed. - Eddie

10/31/01

On October 2, 2001 Grace Calhoun with the City of Anderson requested some information about the Appleton Mill. because the City was interested in developing a property across the street from the closed mill. I asked Eddie Clements in Appalachia I District to take a look at the site for her. His site visit did not indicate any immediate environmental concerns (see above).

Anderson, South Carolina
SCDHEC Site ID No. 14160
EnviroSouth Job No. 1193

Dear Mr. Miner:

EnviroSouth, Inc. is pleased to provide you with the attached verification report for the referenced site. As shown in the report, no compounds exceeded the SSTLs for any of the monitoring wells. Based on the results, as well as the similarly favorable results of lab analyses on the split samples you collected, we request your approval to remove and abandon the remediation system and all wells.

If you have any questions concerning this report, please do not hesitate to call us.

Sincerely,

EnviroSouth, Inc.

2nd VERIFICATION GROUNDWATER MONITORING REPORT

GERALD'S RADIATOR
1705 W. WHITNER STREET
ANDERSON, SOUTH CAROLINA
SCDHEC Site ID No. 14160

Job No. 1193

Prepared by:

EnviroSouth, Inc.
3440 Augusta Road
Greenville, South Carolina 29605

March 19, 2009

INTRODUCTION

EnviroSouth has completed the 2nd post-remediation verification groundwater monitoring and sampling event at the Gerald's Radiator facility located in Anderson, South Carolina. The purpose of the monitoring event was to evaluate the distribution of dissolved petroleum compounds underlying the site.

This report includes a description of the field and laboratory services, along with our current findings, conclusions, and recommendations.

METHODS and FINDINGS

Groundwater Elevation and Movement

Water level measurements in all monitoring wells were recorded by EnviroSouth with a hydrocarbon sensitive electronic interface probe on February 26, 2009. The interface probe was decontaminated prior to and between each measurement to prevent cross-contamination between wells. The water table aquifer occurs under unconfined conditions underlying the site at depths ranging from 2.17 to 21.46 feet below land surface. Free product was not detected in any of the on-site monitoring wells. The TOC elevations, water level measurements, and groundwater elevation data recorded to date are included on Table 1.

A Groundwater Elevation Map of the upper portion of the shallow (water table) aquifer was generated based on water level measurements obtained from site monitoring wells. The map is included as Figure 1.

Ground Water Sampling

Water level measurements at all monitoring wells were recorded prior to sampling. Dissolved oxygen readings were collected with a calibrated meter. The two (2) telescoping wells were then purged of a minimum of three well volumes or until the pH and specific conductivity readings of the purge waters were stable, allowing collection of groundwater samples representative of actual aquifer conditions. Samples were collected with dedicated polyethylene bailers, placed in laboratory prepared containers, packed in an iced cooler with completed chain of custody documents, and shipped to a South Carolina certified laboratory for analysis of benzene, toluene, ethyl benzene, xylenes, MTBE, and naphthalene per EPA Method 5030/8260B, sulfate, nitrate, methane, and ferrous iron.

Groundwater Laboratory Data

For the ninth consecutive quarter, benzene, toluene, ethylbenzene and xylene concentrations did not exceed SSTLs in any of the sampled monitoring wells. MTBE, for the fourth time, did not exceed the SSTL in any of the wells. Naphthalene was also not detected above the SSTLs in any wells.

A summary of current and historical volatile organic compound groundwater laboratory data from the site is included as Table 2. A Groundwater Concentration Map showing current data is included as Figure 2. Dissolved oxygen data is included as Table 3.

Based on the mass reduction calculation, the CoC reduction at the site this quarter is 100 percent.

CONCLUSIONS

EnviroSouth activated the fixed AS remediation system on August 26, 2004 to remediate the dissolved plume. The air sparge system was shut off on July 23, 2008 to allow initiation of the 6-month verification period. The continued absence of CoC's in all wells above SSTLs indicates no measurable rebound in concentrations since the remediation system was deactivated in July. Upon approval from the SCDHEC, EnviroSouth will remove all remediation system equipment and properly abandon all air sparging and groundwater monitoring wells associated with the subject site.

Sample/Cooler Receipt Checklist

Client Accuss Work Order Number 0902483

Checklist completed by NL 2/28/9
Signature Date

Carrier name: FedEx __ UPS __ Courier __ Client __ US Mail __ Other _____

Shipping container/cooler in good condition? Yes ✓ No __ Not Present __

Custody seals intact on shipping container/cooler? Yes __ No __ Not Present ✓

Custody seals intact on sample bottles? Yes __ No __ Not Present ✓

Container/Temp Blank temperature in compliance? (4°C±2)* Yes ✓ No __

Cooler #1 3.4° Cooler #2 _____ Cooler #3 _____ Cooler #4 _____ Cooler#5 _____ Cooler #6 _____

Chain of custody present? Yes ✓ No __

Chain of custody signed when relinquished and received? Yes ✓ No __

Chain of custody agrees with sample labels? Yes ✓ No __

Samples in proper container/bottle? Yes ✓ No __

Sample containers intact? Yes ✓ No __

Sufficient sample volume for indicated test? Yes ✓ No __

All samples received within holding time? Yes __ No ✓

Was TAT marked on the COC? Yes ✓ No __

Proceed with Standard TAT as per project history? Yes __ No __ Not Applicable ✓

Water - VOA vials have zero headspace? No VOA vials submitted __ Yes ✓ No __

Water - pH acceptable upon receipt? Yes ✓ No __ Not Applicable __

Adjusted? _____ Checked by NL

Sample Condition: Good ✓ Other(Explain) _____

(For diffusive samples or AIHA lead) Is a known blank included? Yes __ No ✓

See Case Narrative for resolution of the Non-Conformance.

* Samples do not have to comply with the given range for certain parameters.

RE: Preliminary Aquatic Resource Investigation
Mill House
500 Glenn Street
Anderson, Anderson County, South Carolina
Project No. PRWCK-26-SC-10315-01

Dear Mr. Sullivan:

Per your request, United Consulting has completed a preliminary investigation of aquatic resources on the above-referenced property, hereinafter referred to as the Subject Property. The Subject Property consisted of a 35.59-acre tract located south and east of Glenn Street, west of Appleton Street and north of Highway 24 in Anderson, Anderson County, South Carolina. The general site location is shown on Figure 1 of this report.

APPROACH:

United Consulting's evaluation included conducting background research of available topographic, wetland, and soils maps for the Subject Property, as well as conducting an on-site investigation of the property for wetlands and other jurisdictional waters of the U.S. in accordance with the U.S. Army Corps of Engineers (USACE) 1987 Wetland Investigation Manual and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual, Eastern Mountains & Piedmont Wetlands, dated April 2012. Waters were also evaluated in accordance with the proposed Waters of the U.S. (WOTUS) rule, which was published in the Federal Register (Vol. 90, No. 222), dated November 20, 2025. According to the Supreme Court decision in the Sackett case that resulted in these revised rules, in general, WOTUS must be considered "relatively permanent", and wetlands must have a "continuous surface connection" to relatively permanent waters (RPW) and be indistinguishable from the adjoining RPW to be considered jurisdictional. These proposed WOTUS rules are not yet effective but are expected to become effective in mid-2026.

IN OFFICE RESEARCH:

The U.S. Geological Survey National Topographic Map of the area was reviewed prior to the site visit. An intermittent stream was mapped flowing south of a pond on the southern portion of the Subject Property. Another intermittent stream flowed into the firs perennial stream from the east. A . A copy of the USGS topographic map showing the approximate Subject Property boundaries is attached as Figure 2.

The National Wetland Inventory (NWI) Digital Map was reviewed to determine if any known wetlands or other jurisdictional waters were mapped on the Subject Property. Riverine features were mapped flowing south out of a freshwater pond and from the east in the approximate areas of the features mapped on the USGS topographic map. A copy of the NWI map is attached as Figure 3.

The USDA Digital Web Soil Survey was reviewed to determine if any known hydric soils have been mapped on the Subject Property. The soil survey map indicated two map units located on the Subject Property. These included the following:

- CmB: Cecil-Urban land complex, 2 to 6 percent slopes
- CmC: Cecil-Urban land complex, 6 to 10 percent slopes

The Cecil-Urban soil type was not listed as a hydric soil and was not listed with hydric soil components. A copy of the soil survey map is attached as Figure 4.

United Consulting utilized the Environmental Protection Agency (EPA) Antecedent Precipitation Tool (APT) version 3.0.8 to assess weather conditions at the time of the site visit. This tool utilizes data from multiple rain gauges from the surrounding area to establish normal weather conditions for the input area and provides results of multiple established climate calculations. Based on the Water-Budget Interactive Modeling Program (WebWIMP) method, the site was visited within the wet season. The precipitation normalcy calculations indicated conditions were drier than normal at the time of the site visit. According to the rain gauge, ANDERSON REGIONAL AIRPORT, no rainfall was recorded the week prior to the site visit.

Following completion of the in-office research, the Subject Property was then investigated for visual evidence of wetlands and other jurisdictional waters.

FIELD DELINEATION:

A field investigation was conducted on the Subject Property on March 30, 2026. United Consulting walked the Subject Property to find features which may be considered jurisdictional waters. For features which may be classified as jurisdictional, United Consulting conducted limited mapping of the identified features using a Trimble DA2 global positioning system (GPS). At the time of the site reconnaissance, the Subject Property contained foundations remaining from former textile mill operations. The southern portion of the Subject Property was wooded and undeveloped.

A perennial stream feature was observed flowing south out of headwall near the southeast corner of an on-site pond. The pond was located on the south-central portion of the Subject Property. The feature flowed south southwest before flowing off-site across the southern boundary of the Subject Property. The feature was characterized by continuous flowing water, a clear ordinary high-water mark (OHWM), the presence of pools and riffles, and coarse substrate including rocks and gravel. The feature was approximately five to twelve feet in width. Small wetland areas were observed along the banks of the perennial stream feature. These wetland features were approximately three to six feet wide and contained saturated surface soils, wetland vegetation, and hydric soils.

An intermittent stream channel flowed from a culvert near the southwest portion of the pond. A portion of this channel contained paved concrete before transitioning into a substrate of silt, sand, and clay. The intermittent stream flowed south southeast and into the perennial stream channel..

CONCLUSIONS AND RECOMMENDATIONS:

United Consulting has completed an investigation of potential jurisdictional features on the Subject Property. This included a field determination and limited GPS mapping of the location of the identified aquatic resources on the Subject Property. United Consulting identified perennial and intermittent stream channels, a pond, and wetland areas which we believe would currently be regulated as federal jurisdictional WOTUS by the USACE under Section 404 of the Clean Water Act.

Minor impacts or disturbances to WOTUS can be authorized under the nationwide permit program. In general, impacts of up to 0.05-acre of stream or 0.5-acre of jurisdictional wetland can be authorized, but requires prior approval from the USACE. In addition, compensatory mitigation will be required for impacts of 0.005-acre stream or 0.1-acre of jurisdictional wetland or more.

LIMITATIONS:

The information provided in this report and shown on Figure 5 represents our opinion based on professional experience and the site observations at the time of our site visit. Limits of aquatic resources can and do change over time. Please note that official determinations regarding federal jurisdictional waters are made by the USACE. We recommend that official determinations and proper permits be obtained prior to disturbance of these areas. No warranty is expressed or implied.

We appreciate the opportunity to assist you with this project. Please call if you have any questions concerning this report, including questions regarding permitting.

Sincerely,

UNITED CONSULTING

Jenna R. Forte

Summary

Mr. Abernathy's work experience includes watershed assessments, ecological evaluations, wetland and stream delineations, sediment surveys, and water quality analysis. He has experience in water quality testing and measurement of physical attributes of streams. Mr. Abernathy has assisted in, or personally conducted over 100 wetland and stream delineation projects, and prepared permit applications for U.S. Army Corps of Engineers and Georgia Environmental Protection Division approval. Many of these projects also included determining stream classifications based upon the North Carolina *Methodology for Identification of Intermittent and Perennial Streams and Their Origins* manual. Mr. Abernathy has conducted multiple pond and lake sediment evaluations. He has conducted numerous stream quality assessments, with an emphasis on fish and macro-invertebrate sampling.

Project Experience

WATERSHED ASSESSMENTS - LAFAYETTE, GEORGIA. Mr. Abernathy conducted watershed assessments on sample stretches of streams within and near the city of LaFayette Georgia. The work included measuring chemical parameters utilizing mulit-probe, count titration, and color wheel methodology. The streams were also scored using the North Carolina Stream classification manual. Mr. Abernathy also conducted pebble counts, stream velocity measurements, habitat assessments, and riffle and pool counts and measurements. Macroinvertbrate collection was conducted utilizing kick-nets and followed the Georgia DNR Standard operating Procedures. Fish collection was conducted using backpack electro-shocking equipment and seines. Mr. Abernathy utilized the collected specimens to calculate metrics which correspond to stream quality scores. These metrics included the Index of Biotic integrity (IBI), Index of Well Being (IWB), and other various metrics that provide insight into relative Stream health. Mr. Abernathy performed similar assessments in **Georgetown, Georgia** and **Carnesville Georgia**.

ARC WAY MITIGATION BANK – GWINNETT COUNTY, GEORGIA. Mr. Abernathy conducted macroinvertebrate and fish sampling within an area of impaired streams and wetlands. Sampling was conducted utilizing the Georgia DNR Standard operating Procedures. Collected biological data was utilized to calculate IBI and IWB scores. Additional tasks included delineation of aquatic resources and other visual evaluations of aquatic features. Data was utilized to assist in preparation of the proposed mitigation bank application documents.

FULTON COUNTY SCHOOLS LEARNING CENTER – SANDY SPRINGS, GEORGIA. Mr. Abernathy delineated and flagged a stream flowing through this previously developed property. In addition, Mr. Abernathy took cross sectional and lateral stream measurements for permit application purposes. As part of the work conducted on the property, the stream was also classified using the North Carolina methodology. Mr. Abernathy assisted with preparation of the permit documents for obtaining USACE and EPD approvals for impacts to the stream and stream buffer.

COMMERCIAL DEVELOPMENT – ATHENS, GEORGIA. Mr. Abernathy conducted a field delineation for a stream located on a property in Athens, Georgia which was proposed to be purchased for the use of a commercial development. Mr. Abernathy flagged and then used GPS technology to record the boundaries of the stream on the property. Mr. Abernathy also met with the county to receive confirmation of their agreement of the start of the stream for buffer requirements. Mr. Abernathy scored the stream using the North Carolina methodology in order to classify the stream system. Mr. Abernathy also prepared the pre-construction notification documents for submission to the Army Corp of Engineers and buffer variance documents for the State of Georgia, Environmental Protection Division. Approval from both the USACE and the EPD was obtained.

WOODBURY PRESERVE DOWNSTREAM LAKE – FORSYTH COUNTY, GEORGIA. Mr. Abernathy completed a pond sediment evaluation on a pond located in Forsyth County, Georgia. The pond was located downstream of a construction project, and residence neighboring the pond were concerned with runoff from this development. Mr. Abernathy laid out transects across the pond shores, then took measurements of soft sediment and collected sediment cores along the transects.

THE LAKES AT CEDAR GROVE- FULTON COUNTY, GEORGIA. Mr. Abernathy conducted a lake evaluation for an approximate 35.6-acre impoundment located within a residential community consisting of single-family homes in Fulton County, Georgia. This evaluation consisted of a historical aerial review of the watershed of the impoundment. Collecting soft sediment depths along transects across the site and collecting sediment cores within the impoundment. Water quality parameters were also collected which included; pH, temperature, dissolved oxygen, biological oxygen demand, fecal coliform, total phosphorus, nitrite-nitrate, and turbidity. Mr. Abernathy also visually examined the area downstream of the pond to look for evidence of sediment loads within the creek.

SOUTH BERKELEY LAKE SEWER PROJECT – BERKELEY LAKE, GEORGIA. Mr. Abernathy collected sediment data within a pond located downstream of a sewer project. Mr. Abernathy also assisted with the collection of in stream data. This data was collected with the use of automatic water quality monitors equipped with data collectors and telemetry systems. Equipment was placed within streams in the area of the sewer improvements, upstream of the pond.

OVERTON PARK SITE – COBB COUNTY, GEORGIA. Mr. Abernathy conducted a wetland and stream delineation on the property. This included: research available soil surveys and wetland inventory maps; an on-site routine wetlands delineation using guidelines set forth in the USACE 1987 Wetland Delineation Manual and 2012 Piedmont Regional Supplement; and locating and flagging the wetland-upland boundary for the extent of the project site. The delineation identified jurisdictional waters on the property and the limits were located using GPS equipment.

EAST HIGHLANDS – GWINNETT COUNTY, GEORGIA. Mr. Abernathy conducted a wetland delineation of an approximate 45-acre tract in Lilburn, Gwinnett County Georgia. This including flagging and recording GPS points for the streams, wetlands and pond located on the site. Mr. Abernathy also prepared preconstruction notification and jurisdictional request documents for submittal to the Army Corp of Engineers. At the beginning of grading activities for the development, Mr. Abernathy conducted a visual assessment of the streams flowing from the site to look for evidence of recent sediment discharge into the streams. Mr. Abernathy then conducted a sediment survey within an impoundment downstream of the development. This assessment consisted of establishing transects across the inlet of the pond and taking measurements of the water depth and sediment thickness. Core samples were also collected from the pond to look for evidence recent sediment deposition.

APPENDIX I

Qualifications

United Consulting was formed on January 1, 1990, to provide engineering, environmental and related services. Having evolved directly from a predecessor firm, with all the files and owners from that firm, United Consulting has been in business for more than 30 years providing engineering and environmental services. The principals started performing Phase I Environmental Assessments in 1986 and have adapted the ASTM standards as they were developed and modified. The company has performed thousands of these assessments, and over 500 in each of the last seven years. All senior personnel reviewing Phase I Environmental Assessments have been practicing in the environmental field for at least five years and have been responsible for over 100 Phase I Environmental Assessments.

TIMOTHY J. BECK, P.G.

Certification/Training

- NPDES Level IB
- Mold Assessment & Remediation in Buildings
- NRSB Certified Radon Measurement Specialist

Summary

Mr. Beck began his career with United Consulting in 1985 in the Environmental Services Department. He gained his environmental knowledge in the field and has taken his extensive experience as a field engineer, to a project manager, now serving as a teamleader in the Environmental Services Department and as Executive Vice President of United Consulting. Mr. Beck has completed hundreds of Environmental Site Assessments including project management, data collection and analysis, reporting, and client consultation.

Mr. Beck's experience includes project management and field inspection in the residential, commercial, government, and industrial areas conducting Phase I and Phase II Environmental Site Assessments, water and groundwater drainage investigations, mold and moisture inspection and assessments, Indoor Air Quality Investigations and Testing, thermal imaging investigations, radon testing and radon mitigation design, radon venting design, NPDES inspections, dry weather screening assessments, illicit discharge investigations, stormwater mitigation investigations, to name a few.

This experience has prepared Mr. Beck to manage projects for United Consulting over the years from small projects of $100,000.00 to large projects of $10,000,000.00+ in size.

Project Experience

MECHANICSVILLE SCATTERED HOUSING-ENVIRONMENTAL ASSESSMENTS – GEORGIA DCA. Mr. Beck managed a recent pilot project for the Georgia Department of Community Affairs in accordance with Georgia DCA standards. The duties of he and his team included conducting the Phase I ESA site reconnaissance, reviewing historical documentation, conducting Phase II field investigations, providing environmental expertise regarding evaluating RECs, conducting Property Condition Surveys, conducting asbestos surveys, conducting lead based paint surveys, conducting mold and moisture investigations, and conducting radon testing on over 30 various residential homes and land parcels in the Atlanta area and preparing and reviewing final reports.

Some other representative projects include:

- Central Metals Recycling Center – Atlanta, Georgia
- Mechanicsville Apartments – Atlanta, Georgia
- Columbia Senior Residences at Mechanicsville – Atlanta, Georgia
- Savannah Storm Water Soil Remediation – Savannah, Georgia
- Aarons Incorporated Headquarters Building – Atlanta, Georgia
- City of Atlanta 27 Fire Stations – Asbestos Surveys
- Eight Buildings at Brook Run Park – Asbestos Surveys – DeKalb County, Georgia
- St. Luke's Episcopal Church – Atlanta, Georgia
- Westside Police Precinct – Atlanta, Georgia
- Hanfred Court Site – Atlanta, Georgia

Summary

Ms. Jenna Forte has completed more than 150 site evaluations including Phase I Environmental Site Assessments, ecological evaluations, wetland and stream delineations, sediment surveys, and water quality analysis. She has successfully completed environmental assessments utilizing standards that are more stringent than current ASTM guidelines, such as outlined by individual clients and the Georgia Department of Community Affairs. Ms. Forte has worked with a variety of clients including private landowners and corporate clients. She has also assisted in wetland and stream delineation projects, and prepared permit applications for U.S. Army Corps of Engineers and Georgia Environmental Protection Division approval. Many of these projects also included determining stream classifications based upon the North Carolina *Methodology for Identification of Intermittent and Perennial Streams and Their Origins* manual.

Project Experience

PINE GROVE RESIDENTIAL – ROSWELL, GEORGIA. Ms. Forte delineated and flagged a stream flowing through a residentially developed property and into a large pond. In addition, Ms. Forte took cross sectional and lateral stream measurements for permit application purposes. As part of the work conducted on the property, the stream was also classified using the North Carolina methodology. Ms. Forte prepared the pre-construction notification documents for obtaining USACE and EPD approvals for impacts to the stream and stream buffer.

1285 SYLVAN ROAD, ATLANTA, GEORGIA. Ms. Forte performed a Phase I Environmental Site Assessment on a tract which formerly contained a concrete pipe company and was currently an automobile salvage yard. Based on file review data from the Georgia Environmental Protection Division and observations at the time of the site visit, United Consulting determined several violations and reported detections of contaminants on the adjoining properties, represented RECs to the Project Site. Subsequently, a Phase II Environmental Site Assessment was performed to determine the extent of environmental conditions and any chemical impacts at the Project Site.

MURPHEY CANDLER LAKE- BROOKHAVEN, GEORGIA. Ms. Forte conducted a lake evaluation for an approximate 22-acre impoundment located within a residential community consisting of single-family homes in Brookhaven, Georgia. The evaluation focused on collecting water quality parameters from various locations within the lake to assess the potential fluctuations relative to the 2019 assessment performed following completion of dredging work within the lake. This evaluation consisted of collecting soft sediment depths along transects across the site and collecting sediment cores within the impoundment. Water quality parameters were also collected which included; pH, temperature, dissolved oxygen, fecal coliform, total phosphorus, nitrite-nitrate, and turbidity. Ms. Forte also visually examined the area downstream of the pond to look for evidence of sediment loads within the creek. A detailed report was prepared to provide the client with a summary of the data and comparisons to regulatory and reference data.

ORCHARD HILL LANDING SENIOR RESIDENCE – MILLEDGEVILLE, GEORGIA. Ms. Forte conducted work for the preparation of a tax credit application to the Georgia Department of Community Affairs (DCA). The site included a 4.48-acres developed with three multi-family homes and one single-family home. The application required the sampling of hazardous materials at the site including asbestos and lead based paint. Other items included radon testing, Phase I, Phase II, cultural resource work, and soil and groundwater sampling. The project spanned multiple years and several updates to the initial assessment were required.

BANA INDUSTRIAL – COMMERCE, GEORGIA. Ms. Forte conducted work for the preparation of a USACE Individual Permit, and Jurisdictional Determination for state and local authorities. A stream and wetland delineation was conducted to determine the boundaries of the onsite aquatic features. USACE Individual Permit documents were prepared including mitigation worksheets, jurisdictional request documents, and wetland plot sample forms. United Consulting reviewed the site to consider the development's impact on environmental factors such as endangered species, cultural resources, trout streams, aera aesthetics, impacts to water resources, water quality, mineral resources, area recreation, and many others. This site required extensive alternative site analysis as well as alternative analysis for on-site alternatives. United Consulting worked with the client to submit to the USACE and site plan which was determined to be the least detrimental for the environment.

PROVISIONS AT FLAT SHOALS, ATLANTA, GEORGIA. Ms. Forte performed a Phase I Environmental Site Assessment on a parcel for application to Georgia DCA. The property contained an existing structure as well as the remnants of former structures. As part of the assessment, reviews for radon, noise, protected species, wetlands, and state waters were also performed. In addition, due to the presence of the structures, Ms. Forte assisted with the completion of an asbestos survey and soil sampling for lead. Ms. Forte prepared detailed reports to document the findings of the testing and assessments, which were presented to the client and DCA.

MICHAEL G. ABERNATHY

Location

Norcross, Georgia

Primary Focus

Watershed Assessments
Stream Bio-assessments
Ecological Evaluations
Environmental Assessments
Wetland/Stream Delineations
Sediment Survey

Years of Experience

Firm - 12 Total - 13

Education

BS Forestry Resources | University of Georgia | 2006

Licenses

Georgia Asbestos in Buildings: Inspector and Management Planner Refresher, No. 16730
Georgia Environmental Protection Division Lead-Based Paint and Asbestos Certificate, No. 60 INSO 0118 9997
40-hour Basic Wetland Delineation course
Georgia DOT eLearning Course "Environmental Procedures Manual-Ecology."

Summary

Mr. Abernathy's work experience includes watershed assessments, ecological evaluations, wetland and stream delineations, sediment surveys, and water quality analysis. He has successfully completed environmental assessments utilizing the ASTM and AAI standards, as well as client specific standards that are more stringent. He has experience in water quality testing and measurement of physical attributes of streams. Mr. Abernathy has conducted assisted in, or personally conducted over 80 wetland and stream delineation projects. He has completed radon testing, asbestos surveys, lead paint surveys and soil and water sampling. He has conducted numerous stream quality assessments, with an emphasis on fish and macro-invertebrate sampling. He has also conducted multiple asbestos surveys; both in residential and commercial structures. Surveys he has conducted ranged in scope from sampling and quantifying asbestos containing materials, to inventorying suspect asbestos containing materials. Additionally, this work often involved the assessment of the condition of building materials, identifying the type (friable vs. non-friable) of material, and documenting locations of suspect materials. Mr. Abernathy has conducted Lead based paint surveys utilizing both XRF analyzers and via collecting paint chip samples.

Project Experience

ENVIRONMENTAL ASSESSMENTS/ASBESTOS & LBP SURVEYS FOR 52 PROPERTIES – COBB COUNTY, GEORGIA. Mr. Abernathy was one of United Consulting's Project Managers during Cobb County's demolition of 34 single family residences *and an* additional 18 properties *that* were assessed by United Consulting over the next few years. United Consulting conducted Phase I Environmental Site Assessments (Phase I ESAs) on each individual property in accordance with Environmental Protection Agency standards. We identified recognized environmental conditions (RECs) at only one of the properties. The age of the on-site structures ranged from 1910 to 2004 with many being built in the 1980s. Asbestos surveys were completed on those structures built after 1980, and lead-based paint surveys were also conducted on the structures which were built before 1980. Regulated asbestos containing materials (RACMs) were identified in 20 of the on-site structures. Six of the on-site structures contained lead-based paint, which was above the current Department of Housing and Urban Development (HUD) action level of 0.5% lead by weight. United Consulting recommended the lead-based painted waste materials be tested for hazardous characteristics using the Toxicity Characteristic Leaching Procedure (TCLP method), prior to disposal.

DECATUR PUBLIC WORKS FACILITY - DECATUR, GEORGIA. Mr. Abernathy was part of United Consulting's environmental team on the demolition of two Decatur Public Works Facility buildings. One of the buildings was a warehouse type structure built in 1971, while the other was a multi-story office building with a maintenance area. United Consulting served as the project Environmental Consultant for the evaluation of the two buildings prior to demolition and renovation. Our evaluation services included Phase I Environmental Assessment, a Hazardous Material Survey, Hazardous Material Abatement Specifications, and Final Abatement Inspection. The evaluation identified a variety of hazardous materials including multiple asbestos-containing materials, fluorescent light tubes, ballasts, refrigeration units, containerized paint, petroleum products/lubricants, backup batteries, hydraulic equipment, roofing tars/asphalt/grouts, vessels and gas cylinders, drums, parts washer, underground storage tanks, air compressors, pesticides/herbicides, and other chemicals.

Since the buildings were occupied during the initial survey activities, United Consulting conducted a follow-up visit to the buildings to conduct destructive sampling and for the collection of roofing samples. United Consulting prepared a comprehensive report in addition to the Hazardous Material Abatement Specifications for use by the abatement contractor. Following completion of the abatement activities, our personnel conducted a visual inspection and air testing to verify removal of the identified asbestos-containing and other hazardous materials. The visual inspection indicated abatement had been properly completed and the air testing did not identify elevated concentrations of asbestos fibers.

COLUMBIA MILL - ATLANTA, GEORGIA. Mr. Abernathy conducted an asbestos survey on eleven building apartment complex constructed in 1963. He collected 288 bulk samples of suspect asbestos-containing materials from 16 units, roofs of the 11 buildings and mail center, and a maintenance area. Regulated quantities of asbestos were found in roofing tars and drywall systems. Results were provided to the client in a written report.

CORNERSTONE APARTMENTS – DORAVILLE, GEORGIA. Mr. Abernathy conducted a Phase I Environmental Assessment on this 28 acre apartment complex in Doraville Georgia. The apartment complex was situated in an area between large petroleum tank farms and a business complex which included a chemical company. Mr. Abernathy recommended additional testing at the facility in the form of a Phase II Environmental Assessment. United Consulting also conducted this assessment, which found several Volatile Organic Compounds in the groundwater of the property.

Mr. Abernathy also performed radon gas screening activities within representative, first floor or ground floor units of the apartment buildings. By placing radon test canisters in the units and removing them 48 to 72 hours later. The radon gas testing was performed to identify whether radon gas concentrations above the Environmental Protection Agency (EPA) and Centers for Disease Control (CDC) Action Level of 4.0 picoCuries per liter of air (pCi/L) have accumulated within the site buildings. A visual asbestos survey was also conducted at the property. This assessment involved no sampling, but the visual assessment of the site building materials to determine if suspect asbestos containing materials were present. Mr. Abernathy identified several suspect materials including drywall, vinyl floor tiles, caulking materials, and HVAC tapes. Drinking water sampling was also conducted at the property. Samples were collected from directly from faucets and preserved on ice and transported to a Georgia certified drinking water laboratory. Lead was not detected above the reporting limit EPA action levels.

COMMERCIAL DEVELOPMENT – HOLLY SPRINGS, GEORGIA. Mr. Abernathy conducted an environmental assessment on a 31-acre property proposed for a large commercial development. The scope of work included and exceeded that of the ASTM Phase I Assessment standard. These requirements included endangered species reviews, initial wetland reviews, flood zone data, soil map review, and multiple other parameters. The reports were reviewed by the clients' legal counsel and identified several potential environmental concerns. Further evaluation of the property is on-going.

WALDEN COTTAGES – CENTRAL, SOUTH CAROLINA. Mr. Abernathy conducted a Phase I Environmental Assessment per the S.C. State Housing Finance & Development Authority (SCH) criteria for HOME funded projects. The assessment was used in the client's application for tax credits for the construction of a senior living development. Additional scope items included: preparation of a report for submittal to local and state historic preservation organizations; review of local health, activity and services of the surrounding area; flood zone data evaluation; an Airport Clear Zone review, assessment of environmental justice; and more. The Modified Environmental Assessment found that the development would not have a detrimental impact to the quality of the human environment.

OVERTON PARK SITE – COBB COUNTY, GEORGIA. Mr. Abernathy conducted a standard Phase I Environmental Assessment at this 4.7-acre tract of graded land. In addition, he assisted with a wetland and stream delineation on the property. This included: research available soil surveys and wetland inventory maps; an on-site routine wetlands delineation using guidelines set forth in the USACE 1987 Wetland Delineation Manual and 2010 Piedmont Regional Supplement; and locating and flagging the wetland-upland boundary for the extent of the project site. The delineation found approximately 140 linear feet of perennial stream flowing across the property and a low area containing wetland soils.
