**Subject:** RE: Stillwater Ridge - 6 inch Meter and Capacity Fee

Field,

As soon as you are able, please send us your preliminary design, so that we can help you to reduce your costs. There is a substantial price difference in capacity fees between 4" and 6" meters. We have customers who have been able to use 4" meters to provide fire protection.

Also, if you do end up needing a 6" meter, and you are able to separate the fire flow from the domestic flow with 2 vaults, we will only charge the capacity fee on the smaller domestic meter size.

Until July 1, 2025 the prices are as follows:

Participation fee regardless of meter size is \$1950

4" meter capacity fee \$5000 (1000 gpm flow)

6" meter capacity fee \$40,000 (1600 gpm flow)

The 6" meter after July, 2025 goes up to \$48,000.

Please call me with any questions,

Patrick

Patrick,

Thanks for returning my call and nice to speak with you! As we discussed, if you could provide me with the cost for a 6 inch water meter and the associated capacity fee with that 6 inch tap that would be great. Thanks!

Sincerely,  
Field Goodlett

## Water Taps

How to get your tap installed as quickly as possible:

1. Ensure that the Inman-Campobello Water District (ICWD) provided flag has been placed and remains obviously visible to accurately depict the desired meter location.
2. For water taps to be made in housing developments, the stub out marker must be in place and it must accurately depict the location of the stub out.
3. All equipment, materials, and anything else that could block ICWD's access to the property must be moved well away from the tap area so that we can perform the necessary work to install the water connection.
4. Make sure that after the other utilities have been located, no one disturbs or removes the marks/flags. Much of the time, ICWD crews will attempt to install a water tap, but cannot for one of the above reasons. Because of the number of tap installations currently needed, ICWD must be as efficient as possible. Therefore, when an ICWD crew arrives at a site to install a tap and can't, that installation will be moved to the bottom of this list and the ICWD will install the next available one instead. ICWD strongly encourages anyone whose pending tap is approaching the top of the list, to make sure the property is actually ready for the ICWD so there is no delay and avoid the \$100 fee that was agreed to on the original tap application.

### COST OF WATER TAPS AND METERS

Tap / Meter Size	Current Price
3/4" Tap with 5/8" Meter	\$1,810
1" Tap with Meter	\$2,850
1-1/2" Tap with Meter	\$6,350
2" Tap with Meter	\$8,150
Taps above 2"	Call ICWD
Taps 2" and below are provided and installed by ICWD.	

**NOTE:** A one time participation fee of \$1,975 per property may also be required.

Please contact the office at (864) 472-2858 to inquire about the fee in your area.
