

## APPENDIX C - STRUCTURAL RISK EVALUATION QUESTIONNAIRE

This Structural Risk Evaluation Questionnaire assesses the seismic risk factors associated with a Property, and is required for any Property located in an area with a strong risk of high seismic activity, defined by the <u>United States Geological Survey (USGS) Peak Ground Acceleration (PGA) Calculator Tutorial</u> as having a Peak Ground Acceleration ("PGA") equal to or greater than 0.15g (i.e., 15% of the acceleration of gravity (g) using a 10% probability of exceedance in a 50 year period).

|   | SECTION 1 – PEAK GROUND ACCELERATION  |  |  |
|---|---|--|--|
| What is the Peak Ground Acceleration for the Property?  | 0 g   |  |  |
| If the PGA is equal to or greater than 0.15g, complete Sections 2 and 3A for a Small Mortgage Loan, or Sections 2 and 3B for any other Mortgage Loan. If the PGA is below 0.15g, no further action is required. |   |  |  |
| SECTION 2 - INELIGIBLE STRUCTURAL RISK FACTORS  |   |  |  |
| If any question is answered "Yes", the Mortgage Loan is ineligible for purchase by Fannie Mae.  |   |  |  |
| Is any building constructed of unreinforced masonry with no seismic retrofit?   | Yes No  |  |  |
| Is any building constructed on a hillside with a slope exceeding a 30-degree angle (50% slope)?   | Yes No  |  |  |
| SECTION 3A - SMALL MORTGAGE LOANS ONLY  |   |  |  |
| If any question is answered "Yes", a Seismic Risk Assessment is required.  If all questions are answered "No", then no further action is required.  |   |  |  |
| Does any building constructed prior to January 1, 1950 have wood frame construction?  | ☐ Yes ☐ No  |  |  |
| Does any building constructed prior to January 1, 1980 have residential units above ground floor commercial space or tuck-under parking?  | Yes No  |  |  |
| Did any building with unreinforced masonry bearing walls have a subsequent seismic retrofit completed after the original construction date?   | Yes No  |  |  |
| SECTION 3B – ANY MORTGAGE LOAN OTHER THAN A SMALL MORTGAGE LOAN   |   |  |  |
| If any question is answered "Yes", a Seismic Risk Assessment is required. If all questions are answered "No", then no further action is required.   |   |  |  |
| Is any building located within 50-feet of a documented Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zoning Act?    | Yes No  |  |  |
| Did any building with unreinforced masonry bearing walls have a subsequent seismic retrofit completed after the original construction date?   | Yes No  |  |  |
| Does any building have a weak or soft story (as defined by the International Building Code) at any floor level?   | Yes No  |  |  |
|   | If the PGA is equal to or greater than 0.15g, complete Sections 2 and 3A for a Sm or Sections 2 and 3B for any other Mortgage Loan. If the PGA is below 0.15g, no fur Sections 2 and 3B for any other Mortgage Loan. If the PGA is below 0.15g, no fur STOIN 2 - INELIGIBLE STRUCTURAL RISK FACTORS  If any question is answered "Yes", the Mortgage Loan is ineligible for purchase Is any building constructed of unreinforced masonry with no seismic retrofit?  Is any building constructed on a hillside with a slope exceeding a 30-degree angle (50% slope)?  CTION 3A - SMALL MORTGAGE LOANS ONLY  If any question is answered "Yes", a Seismic Risk Assessment is require If all questions are answered "No", then no further action is require Does any building constructed prior to January 1, 1950 have wood frame construction?  Does any building constructed prior to January 1, 1980 have residential units above ground floor commercial space or tuck-under parking?  Did any building with unreinforced masonry bearing walls have a subsequent seismic retrofit completed after the original construction date?  TION 3B - ANY MORTGAGE LOAN OTHER THAN A SMALL MORTGAGE LOAN  If any question is answered "Yes", a Seismic Risk Assessment is require Is any building located within 50-feet of a documented Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zone (a.k.a. Pault Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the California Geological Survey and the Alquist-Priolo Earthquake Fault Zone (a.k.a. Alquist-Priolo Zone) as defined by the International Building Code) at any floor |  |  |

| SECTION 3B – ANY MORTGAGE LOAN OTHER THAN A SMALL MORTGAGE LOAN   |  |        |
|---|--|--------|
| If any question is answered "Yes", a Seismic Risk Assessment is required. If all questions are answered "No", then no further action is required. |  |        |
| 4   | Does any building constructed prior to January 1, 1950 have wood frame construction?   | Yes No |
| 5   | Does any building constructed prior to January 1, 1994 have reinforced concrete construction?  | Yes No |
| 6   | Does any building constructed prior to January 1, 1994 have reinforced concrete masonry (CMU) bearing walls?   | Yes No |
| 7   | Does any building constructed prior to January 1, 1994 have wood frame construction over a reinforced concrete podium structure?   | Yes No |
| 8   | Does any building constructed prior to January 1, 2000, with wood frame construction, have residential units above ground floor or tuck-under parking?   | Yes No |
| 9   | Does any building have high-rise construction (8 stories or greater)?  | Yes No |
| 10  | Was any building constructed with direct contact to an adjacent building, regardless of whether the adjacent building is part of the same Property or located on a separate property? (However, Properties with row-style buildings that have continuous roof and floor structures as well as fire separation walls, answer this question "No".) | Yes No |
